

January 3/12

Meeting of Tom Johnson

(1)

- PUB review announced in June 11

↓
initial time frame was December 3/11 — this time frame was ambitious

- Joanne Glynn was counsel for PUB → she went on leave and Jennifer Green filled in (late Spring)

IS met of Steve Skinner in May 11 → modelled after insurance review
→ Tom would consider to be a hybrid review
→ some interviews, some -x, presentation

- met of Vardy / for Energy / Cohort meeting

Challenging to double

- Tom looking for expert / consultant, big engineering projects
- in this will work to duplicate effort

- Knight, Pressold → consultant (engineering responsible for design / looking in July - April group)
(Vancouver) - hydro projects
→ presented in enough detail like insurance review

- Tom works part. in August (→ got approval from Todd Franklin (e-mail))

- date changed until March 31/12 — review done
→ Tom works PUB re. schedule

- Tom Johnson works part. re. LNG issue (Tensen for US)

→ lot of input from Vardy, Vardy

→ Nelson, Navigator both referred to LNG issue

Tensen: Associate, Cambridge, Mass.

NATURAL GAS

x should be looked into

(2)

- Pub asking good questions
- letter to Tom Johnson → this letter to board references "guidelines"
- some level of independence → appointed by LGIC but not independent since LGIC
- Tom would prefer to have actual guidelines

"12 light & low deadlines"

- CA
- CA will not hold separat. public hearings rather coordinate public
- Market from 1 consumer

reference "CA's role" in 2nd last paragraph
in public note

- letter doesn't make sense → "expect participation to be an informal and expert basis"

KNIGHT RESOL

what is Tom using then for?

↓

- no confidential exhibits Knight Resol what can he use then for?

③

What Tom says
 - No per se introduction in terms of his role & clearly ambiguous

10. What CA
 and FBI. to
 Nelson?

~~clear from~~ = role of Cruise Advertiser's report,
 Knight Herald

== vice of website → doesn't know process
 ↓

Exhibit 106 - reliability
 → Not only least-possible power but
 least-possible reliable power
