Subject : Follow-up with Premier

My notes from the meeting with the Premier, some parts of which you may have already provided:

- employment and production value being experienced in Sudbury which is a direct consequence of VB
- lower Churchill data on the potential carbon displacement, number of households it can serve, and other relevant data to illuminate its ecological value to Canada
- what has NL said in its own climate change plan, what actions are we taking, and how does that compare to the federal plan
- - BN on AOT Energy Chapter - status report

Between you, I assume you will be addressing these items.

I will be getting the info on the Accord legal opinion, and economic arguments related to equalization.

RT
