Hi Auburn,

Just a quick follow up for clarification on the CPW and Revenue Requirement information provided.

The CPW definition provided indicates that it is the discounted present value of "incremental" revenue requirement. Do I have this right? If so, is it correct then that the annual time series data of the nominal \$ revenue requirements for the scenarios provided in the spreadsheets and in the PowerPoint presentation are incremental values as well given that it appears the CPWs are calculated based on these data? Also, if the CPW and Revenue Requirements are incremental, are you able to provide the incremental energy for the Island that matches the revenue requirements of the two scenarios?

Thanks for this and all of your assistance to date. Let me know if you want to discuss.

Regards,
Paul
