Subject : Premier's comments on Energy plan

During the flight up this morning, Premier commented to Gary that he felt the environment section was weak on being definitive as to where we will be in 2041. He cited such examples as being almost 100% hydro, significantly reduced GHGs. Etc.

I remember from early drafts that we had some very strong statements on the impact the actions in the EP would have on the environment but these have been whittled down to more be more non-definitive.

Pierre, i will be speaking with Gary again shortly and will give you a call.

Charles
