# Auditor General's Comments

John Doyle  
*Auditor General*

British Columbia Crown agencies are responsible for a significant portion of B.C.'s total annual public sector expenditures. A key part of their effectiveness is the boards that govern them. It is critical that the board members of these agencies can access accurate, reliable, timely and complete information in order to make fully informed decisions.

To get a sense for whether board members have access to the information they require, and use it appropriately, we surveyed all board members in the Government Reporting Entity (GRE). This was the first time my Office has engaged with board members throughout the entire GRE, and represented 1,033 people in 141 public sector organizations. It is important to note that this was not an audit of the information provided to boards. Rather, it was a self-assessment by board members of the information they receive and how they use it.

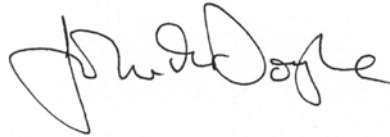

Overall, the survey results were encouraging, as was the response rate of 70%. My thanks to everyone who took the time to respond. I am pleased to provide each public sector board that had a participation rate of 50% or greater in the survey with their own survey results in relation to the average for their sector. In future, I look forward to an even greater response to surveys as the resulting information is designed to benefit all participants directly.

This survey is a starting point. I hope that this feedback will form the basis of a discussion focussed on continuously improving the quality and use of information, and therefore, enhance decision making. It will also provide a benchmark for future work for my Office.

As well as this report, comprehensive guidelines have also been published to help all boards across the public sector enhance decision making through access to, and good use of, quality information. In addition, a summary of good practices identified by board members will soon be available. All of these products can be accessed at [www.bcauditor.com](http://www.bcauditor.com).

## Auditor General's Comments

As well as those board members who responded to our survey, I would like to thank the staff at the British Columbia School Trustees Association, Crown Agencies Secretariat and the Board Resourcing and Development Office for their cooperation and assistance provided to my Office during this work.

*John Doyle, MBA, CA  
Auditor General of British Columbia*

Matt Robinson, Audit Analyst

## Response from Government

Thank you for providing government with the opportunity to respond to the Office of the Auditor General's *Making the Right Decisions: Information use by the boards of public sector organizations*. This response was prepared prior to receiving the Auditor General's Comments.

We are pleased the report concluded, "overall, it appears that boards in British Columbia's public sector agencies are receiving and using the information they require to fulfill their responsibilities". We recognize the survey response averages are 78 per cent or higher for each of the six criteria evaluated.

Government remains committed to ensuring the various Crown agencies' boards receive the information they need to make appropriate and timely decisions. British Columbia is one of the few provinces in the country that has a publicly documented competency-based appointment process which takes into account education and skills of prospective candidates. British Columbia is seen as a leader in this area and is frequently called upon by other jurisdictions to provide advice on corporate governance and recruitment practices.

We are also pleased your report and the companion *Guidelines: Information use by the boards of public sector organizations* recognize the Board Resourcing and Development Office (BRDO) and the Crown Agencies Resource Office (CARO) guidance documents. Your guidelines are consistent with advice contained in the *Shareholder's Expectations of Crown Corporations Manual* and the *Board Good Practices* checklists put out by CARO in conjunction with BRDO.

Government acknowledges the context in the report regarding the education sector. This is the only sector in the report with elected boards and elected members. The education sector also has a greater number of members with less than one year experience than other boards. The Ministry of Education will use this report as impetus to work with the BC School Trustees' Association to enhance their board orientation and training practices, especially for new board members. The Ministry will also work with the BC School Superintendent's Association to renew efforts to improve their communications with board members, which will better enable an effective, trusting working relationship between the school districts and boards of education.

## Response from Government

We thank the Office of the Auditor General for their comments and suggestions for improving Board use of information. We are confident sustained efforts by government and the Office of the Auditor General will maintain British Columbia's role as the leader in providing governance and information for Crown agency boards.

# Executive Summary

# Executive Summary

## Purpose

In fall 2008, our Office issued *Public Sector Governance: A Guide to the Principles of Good Practice*.<sup>1</sup> The report included a detailed conceptual framework for good governance, intended for use by public bodies. In this report, we explore one of the framework's components, information and decision support, as it relates to public sector boards in British Columbia – that is, boards of Crown agencies.

Crown agency boards in the province have a high level of responsibility with a limited number of resources available to ensure their members receive the critical information and support they need to make effective and timely decisions. If boards are to make fully informed decisions, board members must first know what information they require and how to access it. Furthermore, the information provided to them must be of high quality, and members must be aided in understanding and using it. Without access to accurate, reliable, timely and complete information, boards risk making poor or inappropriate decisions.

This report provides insight into the importance, nature and scope of information currently being provided to board members in British Columbia.

## What we did

Our first step was to conduct a literature review of numerous professional and expert sources worldwide concerning board operations and information use. From this, we developed a set of guidelines for good practices of information use by public sector boards. Then, against this set of guidelines, we drew up two separate surveys: one for board members in the province's public sector organizations that have boards; and the other for the corporate representatives of these public sector organizations.

Our aim was to obtain baseline data with which to better understand how boards and their members are accessing and using the information they require in fulfilling their responsibilities to British Columbia's Crown agencies.

In all, about two-thirds of board members and corporate representatives completed the surveys.

---

<sup>1</sup> Office of the Auditor General of British Columbia, "Public Sector Governance: A Guide to the Principles of Good Practice", December 2008.

## Executive Summary

### What we found

Overall, it appears that boards in British Columbia's public sector agencies are receiving and using the information they require to fulfill their responsibilities. Boards, for the most part, know what information they require and they have access to it.

Some sectors are doing notably better with information access and use than other sectors. In the health sector and Crown corporations, board use of information is well in line with what we are recommending in the Board Use of Information Guidelines. In the education sectors, on the other hand, there is room for improvement in this area.

Among the areas reported by boards and corporate representatives as operating with room for improvement are:

- boards in the education sectors having an inappropriate mix of education and experience;
- management believing that the information requirements of its board are being met, while board members report otherwise;
- first-year board members being less confident in how to access information they need, as well as how to use and interpret the information they do receive;
- lack of clear explanation of some information presented to boards;
- some boards report their decision-making process does not ensure adequate awareness of the risks involved;
- board debates being guided by insufficient, or inappropriate, information; and
- lack of evaluation by some boards of the quality and quantity of the information they receive.

We concluded that each board should review its current situation with information accessibility and use and, with direction from the Board Use of Information Guidelines, determine how it can best improve.

# Detailed Report

## Background

### Crown agencies account for well over half of all public sector spending in British Columbia

Crown agencies are organizations, created by statute, whose sole shareholder is the government (that is, the Crown). They deliver many of the services that British Columbians require and expect from the public sector—everything from electricity and education to car insurance and health care. In this way, Crown agencies play a role in the daily lives of millions of the province’s residents, while at the same time advancing the policy priorities and objectives of government. So vital is their work within the public sector that they are, in effect, the “other arm of government.”<sup>2</sup>

The overall annual expenditure by all Crown agencies in British Columbia in 2008/09 was \$34 billion—equal to 69% of British Columbia’s total public sector expenditure during that fiscal year.

### Boards oversee Crown agencies and in that role wield tremendous influence

Unlike the governance structure of a ministry, where control flows directly down from the Minister to civil servants, Crown agencies are governed through a board of directors. Crown agencies are controlled by government when government has the power to govern their financial and operating policies. Often this control exists when government has the power to unilaterally appoint and remove the majority of board members. However, control can exist by any means resulting in the power to direct the operations of the entity.<sup>3</sup>

Thus, given the reliance British Columbians place on their Crown agencies every day of the year, it is critical that public sector boards in the province be well informed and capable of fulfilling their functions.

<sup>2</sup> Elizabeth Watson (CICA), *20 Questions Directors Should Ask About Crown Corporation Governance*, 2007, pg. 4.

<sup>3</sup> Public Sector Accounting Board Standards.

## Background

### Three categories of Crown agencies

- 1) Commercial Crown corporations are revenue generating and charge fees for goods and services delivered. (e.g., BC Hydro)
- 2) Service Delivery Agency Crown corporations are government – and/or self-funded and deliver goods and services based on government policy. (e.g., British Columbia Assessment Authority)
- 3) SUCH Sector Organizations. (e.g., school districts, universities, colleges, health organizations)

Crown Agencies Secretariat,  
British Columbia Crown  
Agency Registry, July 2008.

In the fall of 2008, our Office released a report entitled *Public Sector Governance: A Guide to the Principles of Good Practice*.<sup>4</sup> In that report, we presented a conceptual framework for good governance, a key component of which was information and decision support. It is that component we focus on in further detail for this current report.

### The success of any board is determined by the people who serve on it

Depending on the sector in which the organization operates, board members are either elected to be representatives or appointed by Cabinet. Boards of Education, for example, are composed of trustees directly elected from the school district in which they reside. A percentage of the Boards of Governors of post-secondary institutions is also made up of members who are elected to represent a particular stakeholder group (such as faculty, students, employees and alumni). All other board members of public sector organizations in British Columbia are Cabinet appointees who have met the requirements for their position as set by the Board Resourcing and Development Office.<sup>5</sup>

Boards are not meant to be involved in the day-to-day operations of Crown agencies. They are not usually full-time employees of the organizations they govern, but rather often have numerous other commitments. This makes it extremely important that, on the one hand, they not be burdened with more information than they need to meet their board responsibilities; and on the other hand, they have enough information to enable them to fulfill their roles.

A system must therefore be in place to ensure board members receive the timely, clear, accurate, reliable, concise and complete information they need to do their job. Board members are regularly required to make decisions that have far-reaching consequences and so must be aware of all the options and risks related to the matters they are faced with. In some ways, the tasks of public sector boards are even harder than those of their private sector equivalents because government “is a multifaceted entity that does not always speak consistently.”<sup>6</sup>

<sup>4</sup> Office of the Auditor General of British Columbia, “Public Sector Governance: A Guide to the Principles of Good Practice”, December 2008.

<sup>5</sup> The Board Resourcing and Development Office is the provincial agency responsible for, among other things, ensuring that all provincial appointments are made on the basis of merit following an open, transparent and consistent appointment process.

<sup>6</sup> Elizabeth Watson (CICA), *20 Questions Directors Should Ask about Crown Corporation Governance*, 2007, pg.3.

## Background

### High-quality information is critical to effective decision making by boards

In both the private and public sectors, the responsibilities of boards are becoming more extensive and demanding. As a result of increased responsibilities and other challenges, difficult and risky decisions are a constant for boards. To navigate these challenging waters they require access to quality information, a sufficient understanding of its contents and the ability to execute decisions based on it, in order to steer their organization toward short-term success and long-term viability. Though management has to assume responsibility for providing boards with the majority of the information they require, boards must be satisfied that it is complete, reliable and tailored to their needs. If boards are dissatisfied with the information they receive, they must develop a strategy to address the shortfalls.

#### Existing guidelines for Crown agencies

Our aim in developing the Board Use of Information Guidelines has been to provide Crown agencies with guidance in a specific area where we felt there was a gap: information and decision support. The Guidelines are designed as a set of principles with relevance to all public sector bodies regardless of sector, size or structure. They can be applied to ministries, Crown agencies and even cross-government initiatives.

These Guidelines are intended to supplement, not replace, two key existing sources of guidance for board members of British Columbia Crown agencies:

- The *Crown Agency Secretariat* maintains a policy framework for the governance of the province's Crown agencies, which describes the roles and responsibilities of government and boards members. The central document outlining this relationship is the *Shareholder's Expectations for British Columbia's Crown Agencies*.
- The *Board Resourcing and Development Office* has a mandate to bring professional practices to the area of director appointment and corporate governance in the public sector. The office's expectations are described in its Best Practices Guidelines.

Working in tandem, the Crown Agency Secretariat and the Board Resourcing and Development Office have recently released a series of Good Practices checklists. These incorporate good practices for many of the roles and responsibilities of board members.

The federal government, several provincial legislative audit offices and numerous other governments have also released guidelines and reports on corporate governance over the years—though guidance specifically on board use of information has been minimal.

## Background

High-quality, full information is not simple to come by. It is up to boards to create a culture that supports the use and dissemination of such information. While good information cannot guarantee the effectiveness of decisions or their outcomes, it provides the best chance that all decisions made will have been well informed. This will lead to greater public and stakeholder confidence in organizations, and boards will be seen to have fulfilled their due diligence responsibilities. The above can be succinctly stated in the phrase “information is the currency of governance.”<sup>7</sup>

### Overview of the Board Use of Information Guidelines

The distance of the board from the agency’s daily operations, the limited number of board meetings a year, and the high level of responsibility have all made it important for a system that ensures board members receive information that supports effective and efficient decision making. Board members are typically busy individuals with a great deal of responsibility. They often have limited time and resources to obtain, read and understand the information they require to make well-informed and well-thought-out decisions. For this reason, the information they are provided must be correct, reliable, accessible, up-to-date and understandable.

Six conditions must be met to ensure that boards can make fully informed decisions. Boards must:

1. know what information they need;
2. have access to the information;
3. have high-quality information;
4. understand the information;
5. use the information in decision making; and
6. evaluate the quality and quantity of the information they receive.

Appendix A summarizes these six conditions.

<sup>7</sup> CCAF, “Governance Information: Strategies for Success”, 1996, pg. 1.

## Background

### Our aim in examining information use by boards

Much has been written about the responsibilities and function of boards, and about information and decision making, but not much about what information boards and their members should expect to receive to aid decision-making or how they should use the information provided to them to fulfill their functions. We therefore conducted an extensive review of governance literature from around the world and created a unique set of guidelines for good practice on the use of information by boards (the Guidelines). A summary of the Guidelines is presented in Appendix A. The Guidelines incorporate six conditions for ensuring optimal decision making by boards, as described in the sidebar overview.

Using the good practices identified in the Guidelines, we developed a survey to gauge the current use of those good practices in the British Columbian public sector. The questions for the survey were derived from the same underlying criteria that formed the Guidelines. Board members, board chairs, and corporate representatives of all public sector agencies that have boards (including commercial Crown corporations, service delivery agency Crown corporations, health organizations, colleges, universities, educational institutes and school districts) were invited to complete the surveys.

In this report we summarize our findings from those surveys. Our aim is to inform MLAs, the public, boards and organizations served by boards on how best to ensure that the decision-making information framework needed by boards is in place. As well, we hope that this report might serve as the basis for discussion between boards and management concerning their information processes and practices.

This report is central to the suite of materials, available on our website, pertinent to this topic. The companion documents on the website include: the Board Use of Information Guidelines; a summary of good practices reported to us by board members; and the survey results and survey instruments we used for this project.

# Findings

## Overall

### Seventy percent of board members and corporate representatives responded to our surveys

We sent the board member survey to 1,033 individuals in the 141 public sector organizations in British Columbia that have boards. We received 718 responses, for a response rate of 70%. Of the 136 corporate representatives who were invited to complete the survey, 89 responded (a 65% response rate), as did 94 of the 141 board chairs contacted (a 67% response rate). While these are very good response rates, it is unfortunate that not all board members or corporate representatives chose to complete the survey, as the resulting information is designed to benefit them all directly.

The survey questions were based on each of the criterion for good information use as outlined in the Guidelines (see Appendix A). Both surveys contained questions that used a five-point response scale ranging from “Strongly Disagree” to “Strongly Agree”. Reported survey findings for those questions are based on responses of “Agree” or “Strongly Agree.” Board members were asked 37 questions, board chairs 49 and corporate representatives 15.

The surveys also contained a few open-ended questions where respondents could provide examples of good practice or expand on their answers. The findings from the open-ended questions are reported in a separate good practices guide (available on our website).

### Boards in some sectors are outperforming those in other sectors in all areas of information use

Exhibit 1 presents an overview of all responses, arranged by sector grouping and by the six main Guideline criteria for optimal information use by boards. As the exhibit shows, the health and Crown corporations sectors outperformed the education sectors in all six criteria categories.

# Findings

## Exhibit 1

Comparison of board use of information by sector and good practice criterion

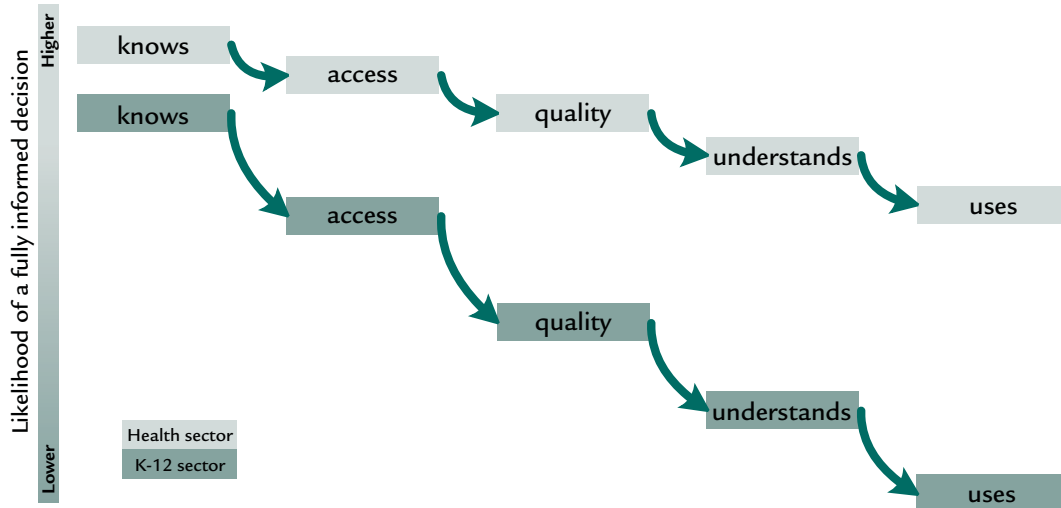

Our assumption was that in each decision-making case, every guideline must be fully met in order for a decision to be made with full information. The more guidelines that are not met in a situation, the greater the cumulative negative effect on the decision-making process. This is illustrated in Exhibit 2, which shows that boards in the K-12 sector are running a greater risk of making incorrect decisions than boards in the health sector. It should be noted, however, that our survey captured board members' perceptions about their use of information which could differ, either positively or negatively, from what actually happens.

# Findings

## Exhibit 2

Potential cumulative effect of not meeting the Guidelines

### A gap in perception about information accessibility exists between management and board members

Generally, the management representatives responsible for providing information to their boards strongly agreed that the information provided to board members would follow the Guidelines. Board members, however, did not feel as strongly that this was the case.

While there is strong agreement among all corporate representatives with respect to the overall provision of board information, agreement levels related to the nature of communication between board members and management are all below the average for those guidelines (see Exhibit 3).

The surveys indicate that communication problems between management and the board are a common theme. Both boards and management reported that a better information strategy would help ensure that information flows effectively in both directions. According to management respondents, 20% of boards are ineffective in communicating their information needs to management, and board chairs report that up to 20% of boards do not have a process in place that allows board members to access the organization, other than through top executives.

# Findings

These findings suggest to us that a gap may exist between the information providers and the information consumers: corporate representatives think things are better than the boards do when it comes to information accessibility and use. This problem may be reduced through strengthened communications between the two groups.

## Exhibit 3

### Management views on the provision of board information

Management informs the board of problems in providing information	98%
Management ensures that information has been validated	98%
Management assists with the interpretation of information	98%
Management informs the board of limitations on the information	97%
Information provided to board is tailored to their needs	96%
Information provided to board is used in decision-making	94%
Average	92%
Board and management discuss information needs	89%
Management uses documentation prescribed by board for information packages	82%
Board effectively communicates information needs	81%

### First-year board members do not feel the information they receive is as effective

The average response to all questions about board members' use of information is slightly lower for members with less than one year experience (see Exhibit 4). Across all sectors, first-year board members rated the effectiveness of available information lower than did more experienced members.

# Findings

## Exhibit 4

Average response by length of service on board

Boards in the education sectors have a greater number of members with less than one year experience than other boards (Exhibit 5). Therefore, even though many factors—such as experience of members, training and available resources—may contribute to overall lower confidence in information effectiveness, it is reasonable to assume that information quality poses a particular concern for education sectors boards. This suggests the need for additional attention to first-year board members.

# Findings

## Exhibit 5

Number of years a member has served on the board, by sector

# Findings

## Board Use of Information, Assessed by Criterion

### Criterion 1 – The board knows what information it requires

Understanding of the information boards require is strong in the Crown corporations and health sectors and weaker in the education sectors (see Exhibit 6).

#### Exhibit 6

Would the practices of the board meet the Guidelines related to full knowledge of the information the board requires, by sector

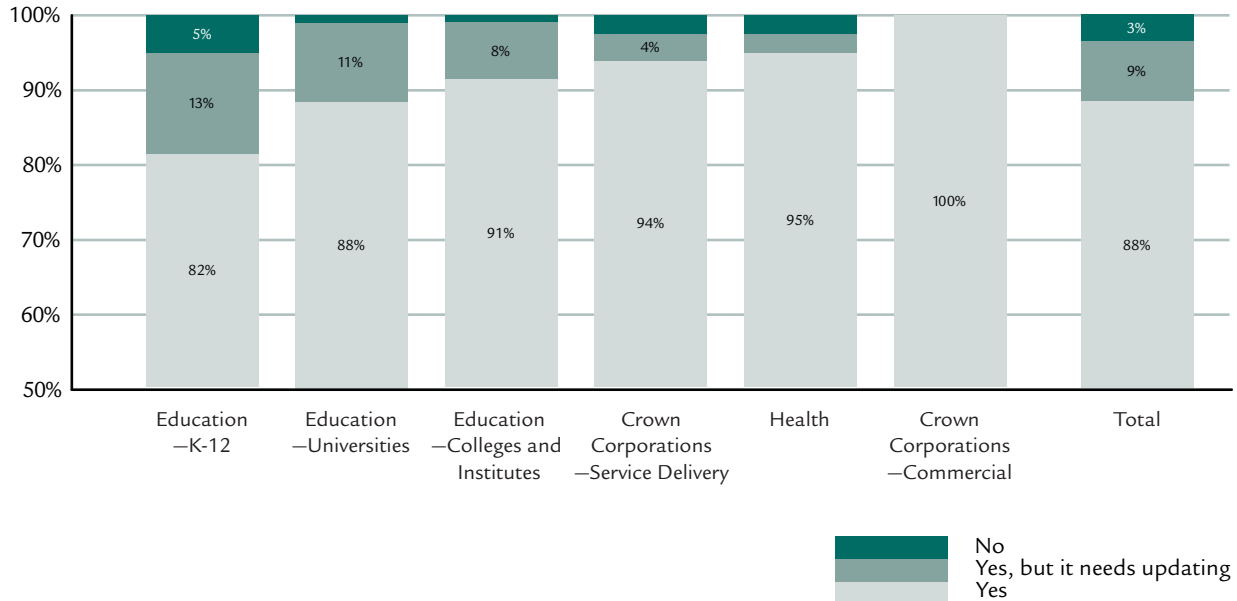

### While most board members understand their responsibilities, some boards have charters and guidelines that need updating

Most members indicated that they are aware of their board’s policies and procedures and know that their board has comprehensive job descriptions. As well, most members of boards in the Crown corporations and health sectors reported that their organization has a manual or guidelines outlining the roles, responsibilities and accountabilities of the board (Exhibit 7). However, almost one-third of all board members in those sectors also reported that their manuals contain no, or very few, best practices regarding board governance. One out of 10 board members across all sectors indicated they did not receive orientation within the first year of joining the board (Exhibit 8).

# Findings

## Exhibit 7

Existence in the organization of a manual or guidelines outlining roles, responsibilities and accountabilities for the board, by sector

## Exhibit 8

Orientation of new board members, by sector

## Findings

### Most board members understand their organization

Survey responses show that, overall, board members are knowledgeable about their organization's mandate and its human, monetary and physical capital. However, nearly three in every 20 members with less than one year's experience reported not having this depth of knowledge.

### Most board members understand their organization's operating environment and clients

Almost all board members felt that they were knowledgeable about their organization's external environment and the expectations of the organization's clients. However, some members with less than one-year's experience reported a lack of understanding of the needs of the organization's clients.

# Findings

## Criterion 2 – Board members have access to the information they require to fulfill their requirements

Across all sectors, board members reported having access to the information they require most of the time. The exception was in the K-12 sector (Exhibit 9).

### Exhibit 9

Would the practices of boards meet the Guidelines related to full access to the information required, by sector

## Most board members have access to the information they require

The surveys showed that many areas are working well across all sectors. For example, almost all boards report:

- proactively working to meet information needs;
- seeking information from both management and external sources; and
- recording meeting minutes.

As well, almost all corporate representatives are informing their boards of limitations in the information and of any problems in providing the information. Furthermore, almost all board members in the Crown corporations sectors, health sector, and Colleges and Institutes reported that:

## Findings

- the information they require exists;
- the information is timely and current;
- the information contains both financial and non-financial information; and
- the board Chair takes responsibility for ensuring that members are fully informed on decision items.

There are also some areas that are not working well. For example, according to 20% of board member respondents (in all sectors except for Universities), technological barriers are preventing board access to necessary information. Furthermore, board members in the K-12 and University sectors reported that:

- the information they require does not exist (10%);
- information is not timely and current (10%);
- reports do not link financial and non-financial information (20%); and
- the board Chair does not take responsibility for ensuring members are fully informed on decision items (20%).

### Boards do not always gather information in a cost-effective manner

Almost every third board reported requesting more information from management than it required to discharge its responsibilities, which suggests that boards are not efficient in collecting information. This problem is particularly prevalent in the K-12 sector, where almost every second board reported this situation.

# Findings

## Criterion 3 – Board members have access to high-quality information

Boards in the Crown corporations and health sectors reported having access to high-quality information. However, the education sectors appear to have room for improvement (see Exhibit 10).

### Exhibit 10

Would the practices of boards meet the Guidelines related to access to high-quality information, by sector

### Not all education sectors boards feel the information best facilitates understanding

Across all sectors, most board members felt that the information they receive for board meetings is clearly presented. They also reported feeling comfortable voicing their concerns about the information they receive. In the health and Crown corporation sectors, most members also felt that the information they receive is tailored to their needs.

Responses in the education sectors highlighted three areas for consideration, with an average of 20% (with up to 35%) of all board members not agreeing with the following statements related to the information they receive for board meetings:

- The information focuses on critical organizational issues.
- The information is tailored to your needs.
- The information facilitates a level of understanding necessary for informed decision making.

## Findings

### Board members in the education sectors do not always have complete information for decision making

Both the Crown corporations and the health sectors reported that the information they receive is generally complete.

The education sectors reported a lack of information that:

- compares performance against plans (as many as 34% reported that this did not occur in the K-12 sector);
- provides historic context, when appropriate (as many as 16% reported that this did not occur in the K-12 sector);
- is forward-looking (as many as 19% reported that this did not occur in the K-12 sector); and
- discusses the consequences of making certain decisions, when appropriate (as many as 34% reported that this did not occur in the University sector).

### Board members feel that the information presented is substantially correct

Nearly every corporate representative responding to the survey indicated that the information presented to the board had been validated through an internal or external audit or other means.

While almost all board members in the Crown corporations and health sectors reported having confidence in the accuracy of the information they receive from their organization's management, more than one in five K-12 trustees reported they did not.

# Findings

## Criterion 4 – Board members understand the information they receive

Across all sectors, board members reported lower-than-ideal levels of confidence in understanding the information they receive. This weakness was particularly demonstrated in the education and Service Delivery Crown corporations sectors (see Exhibit 11).

### Exhibit 11

Would the practices of boards meet the Guidelines related to boards understanding the information they receive, by sector

Some boards do not have sufficient training, experience or time to understand the information.

Many board members indicated that they do not receive periodic training to assist them in conducting their board responsibilities. The percentages, by sector, were as follows:

Education — K-12	13%
Education — Universities	54%
Education — Colleges and Institutes	32%
Crown corporations — Service Delivery	34%
Health	13%
Crown corporations — Commercial	24%

## Findings

The mix of board members' education and experience is reportedly not optimal in one quarter of all education sectors boards. The largest problem is in the K-12 sector where 40% of the boards reported that they did not feel their board had the correct mix of educational background, and 30% did not feel they had the correct mix of skills and experience. This finding may reflect the fact that K-12 boards are elected, not appointed. Possible solutions include having the board contract for professional advice or obtain the missing skills in other ways.

Almost 20% of board members (and 25% of all school trustees) did not feel that they had enough time to understand the information provided to them before a board meeting.

### Not all information presented to boards is clearly explained

Board members reported having resources available to assist them in interpreting information when appropriate. Usually, it is management who assists the board with the interpretation of the information it provides, as requested by the board. However, 18% of board members (and 27% of K-12 trustees) reported that the information provided to them did not contain suitable explanatory narrative.

Only 82% of corporate representatives reported that management uses formal documentation prescribed by the board for information packages where decisions are being requested.

# Findings

## Criterion 5 – Board members use the information they receive

Opinions varied greatly across sectors on how well boards would compare to the Guidelines concerning the use of information (Exhibit 12). Respondents from the Commercial Crowns reported that they fully use the information as outlined by the Guidelines. Universities and the K-12 sectors have room for greater than 20% improvement in this area compared with the Commercial Crowns.

### Exhibit 12

Would the practices of boards meet the Guidelines related to boards fully using the information they receive, by sector

### Some boards are operating without a decision-making framework

About 94% of management representatives reported that, to their knowledge, the information provided to boards is regularly used in board decision-making processes. However, only 80% of board members across all sectors (and 75% of board members in the K-12 and University education sectors) reported knowing that a decision-making framework existed to ensure decisions are made with an awareness of the risks involved.

## Findings

Some board debates are guided by inappropriate or insufficient information.

Some education sectors board members do not feel that board debates are guided by sufficient information and that some of the information does not highlight the nature and extent of risks to the organization. One of the largest problems uncovered was that information presented for board meetings did not explain all important options and trade-offs. Percentage responses to this effect, by sector, were as follows:

Education — K-12	36%
Education — Universities	46%
Education — Colleges and Institutes	27%
Crown corporations — Service Delivery	15%
Health	14%
Crown corporations — Commercial	12%

# Findings

## Criterion 6 – Board members evaluate the quality and quantity of the information they receive

Across all sectors, there is room for improvement in the area of board evaluation of the information they receive (Exhibit 13). The education sectors have from 13% to 18% room for improvement compared with the Commercial Crown sector.

### Exhibit 13

Would the practices of boards meet the Guidelines related to the evaluation of the quality and quantity of the information they receive, by sector

## Some boards do not devote time to evaluating the quality and timeliness of the information they receive

One in three board chairs reported that they do not periodically devote time to evaluating the quality and timeliness of the information the board receives. This problem is also reported by one in 10 management representatives, who report that board members and management do not periodically discuss the board’s information needs and management’s requirements to meet them.

# Appendix

# Appendix A: Summary of the Guidelines for Board Use of Information

	<p><b>[1] The board knows what information it requires</b></p> <ul style="list-style-type: none"> <li>1.1 Board members understand their responsibilities</li> <li>1.2 Board members understand their organization</li> <li>1.3 Board members understand their organization’s operating environment and clients</li> </ul>
