energy LOWER CHURCHILL PROJECT	CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

1.0 PURPOSE AND BACKGROUND

The purpose of this report is two-fold:

- Details the Bidder Selection Process and Evaluation Results undertaken by the Lower Churchill Management Company (LCMC) as part of the Package CT0327 – Construction of 350kV HVdc Transmission Line; and
- 2. Provides a <u>Preliminary</u> Award Recommendation recommending the award of the entire scope to Valard Construction LP, a Quanta Services company.

With the approval of this **Bidder Selection and Preliminary Award Recommendation**, LCMC will progress towards the conclusion of the final negotiations of the formal agreement; including the execution of a Limited Notice to Proceed (LNTP) by mid-April in order to mobilize the early infrastructure (i.e. camps) required to support the clearing works planned for a mid-June 2014 start.

It should be noted that the information from this process has been used to support the confirmation of the contracting strategy and packaging of the entire 1080km of 350 kV HVdc transmission line extending from Muskrat Falls to Soldier's Pond.

nalcor	Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
energy LOWER CHURCHILL PROJECT	CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

2.0 SCOPE OF WORK

At Decision Gate 3 the construction of the 1080 km HVdc line was broken down into two (2) sections and three (3) separate packages, namely:

- Package CT0327 is for the clearing and construction of Section 1 of the HVdc Transmission Line;
- Package CT0345 is for the clearing of Section 2 of the HVdc Transmission Line; and
- Package CT0346 is for the construction of Section 2 of the HVdc Transmission Line.

Note: PCN-0230 subsequently repackaged all the scope of these packages under CT0327. This contract packaging strategy change builds upon lessons learned from the HVac scope, wherein the interface risk for the ROW clearing is transferred to the TL contractor. Further it was clearly identified that separation of the scope leads duplication of access construction effort.

Section 1 consists of approximately 610km of 350kV HVdc transmission line, and is broken into three (3) segments, with a strategy envisioned wherein bidders will be allowed to bid on a single segment or any combination of segments. At the DG3 planning phase it was anticipated that this RFP structure would attract the most interest and competition within the marketplace by allowing participation by companies that are unable to build the entire length of Section 1.

Details of the three (3) segments within Section 1 are as follows:

- Segment 1 From Muskrat Falls, Labrador to 250 km along the path of the proposed transmission line (i.e. the 250 km point).
- Segment 2 From the 250 km point to the Straight of Belle Isle, Labrador, approximately 147 km. This Segment also includes an 18 km wood pole electrode line, which starts at the HVdc line near Forteau and ends at L'Anse-au-Diable in Labrador.
- Segment 3 From the Newfoundland side of the Straight of Belle Isle to the southern end of the Long Range Mountains, approximately 227 km.

The northwest portion of Segment 1 from Muskrat Falls to the 140 km point parallels the Trans-Labrador Highway with some highway crossings. The southeastern part from the 140 km point to the 230 km point has very little access and has major river crossings. As such, clearing and access on Segment 1 will continue while construction starts. There may be an opportunity for the contractor to use the main camp at Muskrat Falls during work in the northern part of this segment.

nalcor
energy
LOWER CHURCHILL PROJECT

Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

Segment 2, the eastern Labrador segment from the 239 km point to SOBI near Forteau is approximately 145 km. This segment will require the construction of a significant access road in the ROW and additional bypass roads to reach remote accommodation site(s). Mountains for approximately 40 km may, depending on the contractor's selected work method, require the use of heavy lift helicopters for transporting personnel, equipment and towers setting.

Segment 3, the Long Range Mountains segment, starts at SOBI near Shoal Cove and is 227 km in length. The route will be subject to coastal weather conditions, large areas of bog, rolling hills of rocky terrain, and is dotted by various small communities. Roads and trails frequently intersect the route but access to individual tower sites will vary considerably. Helicopter clearing and construction is also expected in certain areas of this segment.

Slow progress can be expected in these three segments, due to the terrain, remoteness and the lack of access with schedule time allocated for the construction of major access. A sufficient time period for construction is being provided for this package and in case of a schedule issue we can count on an extra winter before the commissioning of the entire HVdc line.

Access will be the major difficulty faced by the Contractors resulting in a non-linear clearing and construction progress. Many areas will require frozen conditions for travel over wet areas and to reduce/minimize environmental impacts. As early as possible, it will be important to recognize individual problem areas and develop specific solutions such as road- work, bridges, ice bridges and/or the use of helicopters to transport men, equipment and materials.

Details of the two (2) segments within Section 2 are as follows:

- Segment 4 From southern end of the Long-Range Mountain to Clarenville, approximate length is 291 km.
- Segment 5 From Clarenville to Soldiers Pond, approximate length is 178 km.

In much of Segment 4, the line route is at some distance from the Trans-Canada Highway (TCH) but the area has seen considerable logging activity and some mining. There are also two areas that parallel existing NLH transmission line routes. The result is a network of existing trails that provide access to most areas.

The Segment 5 line route closely parallels the TCH and passes through several populated areas with close proximity or crossing private property. An extensive network of highways, roads and trails will provide adequate access. The entire line route in this segment is paralleled with one or two existing transmission lines. There are also six crossings of existing transmission lines of various voltages. These hazards will be mitigated through engineering and construction methods. The construction methods and sequencing of installation work will be coordinated

nalcor energy LOWER CHURCHILL PROJECT	Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
	CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

with the outage availability and coordinating with the owners of the existing lines. For Segments 4 and 5 it will be important to take advantage of the lead-time prior to construction to complete possible geotechnical work and to address stakeholder concerns as this area of the line is in more populated areas compared to the first three segments.

The HVdc component of the Labrador-Island Link Project is a large transmission construction project when compared to other current transmission works in North America, with a total of nearly 1080km of 350kV overhead transmission line to be constructed. The magnitude of the work to be done, combined with geographical challenges and constraints and weather restrictions, emphasizes the requirement for solid construction planning to ensure maximum availability and utilization of work fronts.

Package CT0327 follows and was designed to build upon the learnings from the initial construction package, namely Package CT0319 – Construction of HVac Transmission Lines (MF to CF). The complexity of the HVdc transmission line scope when compared to the HVac scope leads to an increased hurdle when it comes to contractor capability and capacity. Table 1.0 includes a comparative summary of the key attributes of both scopes.

Table 1: Attribute Comparison – HVac and HVdc Transmission Lines

Attribute	LTA 315 kV HVac TL	LIL 350 kV HVdc TL
Length and Location	Two 247 km lines paralleling existing 138 kV CF to HVGB line	Single 1080 km line extending from Muskrat Falls to Soldier's Pond in the interior of Labrador
Right-of-Way Clearing	Separate package – ~2500 Ha	Included in scope – ~6200 Ha
Terrain	Flat with some rolling hills Localized wet areas	Encompasses Long Range Mtns, mountains in lower Labrador, crossing 3 major rivers in Labrador, significant bog and wet terrain
Existing Access	Fair to Good	Remote and Difficult
Tower Size	12,500 MT with each tower ~ 7 MT	35,000 MT in total with towers range in size with heights of up 220ft
Tower Installation Technique	Mobile/Track Crane	Mobile/Track Crane and Air Crane
Conductor Size	Standard / typical Drake conductor 230kV lines by NLH	Extremely large – largest single conductor ever pulled in Canada
Difficulty	Fair	Extremely difficult

nalcor	Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
LOWER CHURCHILL PROJECT	CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

3.0 BIDDER SELECTION PROCESS

The Bidder Selection Process includes the assessment of the five (5) key areas.

- 1. Contractor Capability
- 2. Contractor Capacity
- 3. Marketplace Considerations
- 4. Execution Risk Considerations
- 5. Lessons Learned from previous Bid Events or Contracts

To assess these five (5) key areas, the Bidder Selection Process for the HVdc Transmission Line was designed to comprise of two (2) separate screening phases, specifically Phase I and Phase II. The intention of this advanced screening process was designed in order to validate the overall contracting strategy for the HVdc line as was established prior to Decision Gate 3 and documented in Project's Overarching Contracting Strategy, reference document no. LCP-PT-MD-0000-PM-ST-0002-01 Rev B1.

As such, Phase I was designed as a typical pre-qualification process and potential bidders for screening in Phase II. Phase II was timed to commence during the later stages of CT0319 contracting, thus providing an opportunity to gain insights into the both the interest and capabilities of the potential applicants as well as re-assess market trends. The general timeline for both Phases was as follows:

Phase I: 1-Oct-2012 to 31-Mar-2013

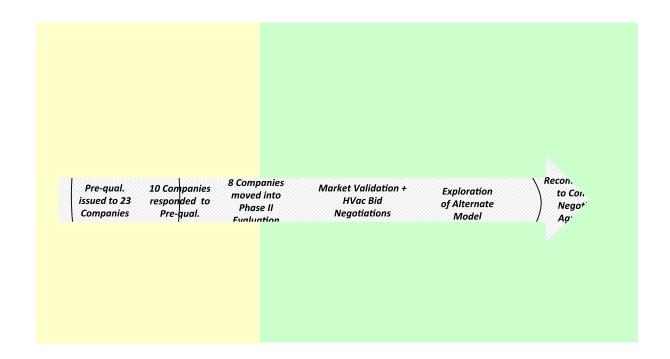

Phase II: 1-Apr-2013 to 31-Jan-2014

Phase I of the Bidder Selection Process commenced with an Application for Bidder Selection Package under the umbrella of Package CT0327 being issued to twenty-three (23) targeted companies on 06-Nov-2012 and closed on 20-Dec-2012. Ten (10) applications were received and were evaluated in accordance with the criteria and procedures established in the Bidder Selection Evaluation Plan. Applicants who were previously approved for CT0319 – Construction of 315kV HVac Transmission Line were only required to provide the technical questionnaire, but in some instances, clarification questions were issued to address missing information.

Phase II of the process commenced following the conclusion of Phase I screening and concurrence with the evaluation of bids received for CT0319 — Construction of HVac Transmission Lines (MF to CF). It was timed to conclude towards the end of 2013 in time to issue a RFP and award a contract for a mid-2014 construction start.

nalcor	Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
LOWER CHURCHILL PROJECT	CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

The following figure illustrates this Two-Phase Process and its associated general timelines.

1 nalcor	Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
energy LOWER CHURCHILL PROJECT	CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

4.0 BIDDER SELECTION: PHASE I SCREENING

4.1 PHASE I SCREENING CRITERIA

In Phase I the qualifications of each Applicant were evaluated according to the following categories:

- Technical Capability
- Commercial Fitness
- Health & Safety Management Systems
- Environmental Compliance
- Quality Management Systems

The Phase I evaluation team members were as follows:

Evaluation Criteria	<u>Representative</u>
Commercial	Micah Sze
Technical	Keenan Healey
Health & Safety	William Bishop
Environmental	Lesley Reid
Quality	Ken Morrison

An overall score was calculated based on the following weightings for each of the five categories:

- 1. Commercial = 25%
- 2. Technical = 30%
- 3. Health & Safety = 15%
- 4. Environmental = 10%
- 5. Quality = 20%.

Applicants must achieve a Health & Safety score of \geq 70%, an Environmental score of \geq 60%, and a Quality score \geq 60% in order to qualify as a potential Bidder.

1 nalcor	Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
energy LOWER CHURCHILL PROJECT	CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

4.2 PHASE I APPLICANT LIST AND RESPONSES

An Application for Bidder Selection package was issued on 06-Nov-2012 and closed on 20-Dec-2012 to the targeted companies listed in Table 2.

Table 2: Target Companies for Application for Bidder Selection Package

#	Applicant Name	Application Received	Approved For CT0319	Comments

energy LOWER CHURCHILL PROJECT	CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

4.3 PHASE I SCREENING RESULTS

From Phase I Screening, the following Applicants were recommended to move into Phase II screening for further exploration:

- Abengoa T&D / Inabensa
- Barnard
- Emera Utility Services
- Innu-Kiewit Constructors
- Isolux Ingerieria
- Kenny Construction
- RS Line / EC Source
- Valard Construction

The following Applicants were screened out of Phase I process:

- PowerTel Utilities Contractors
- Transelec-Arno

4.4 NON-RESPONSIVE APPLICANTS/DECLINED APPLICATIONS

Henkels & McCoy

Multiple attempts were made to contact Henkels & McCoy. Jim Dillahunty, Regional Vice President, left a voicemail indicating that he had received the Application for Bidder Selection and was looking internally for the proper point of contact. Two follow up calls were made. Jim's secretary confirmed that she followed up with Jim, but ultimately Henkels & McCoy did not submit an application.

International Line Builders Inc.

Marla Jordan acknowledged by voicemail that she received the Application. However, International Line Builders did not submit an application.

McGregor Construction

Brett Smith from McGregor Construction acknowledged that they received the Application. The company has been acquired by Quanta Services and they indicated that they would submit an application through Valard Construction.

nalcor	Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
energy LOWER CHURCHILL PROJECT	CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

Michels Construction

Michels initially indicated that they were interested in the project. However, they later sent an email declining the application process due to the remote location of the project.

MYR Group (Sturgeon Electric)

John Fluss confirmed by telephone that he had received the Application but would not be submitting an application, as they had a large backlog of projects and were not interested in any projects outside of the United States (at the time being).

Parsons Brinkerhoff

Beth DeAngelo declined to submit an application because they could not perform the construction, but would be interested in any engineering or program management opportunities.

Pike Electric

David McDuffie sent an email on behalf of Pike Electric of North Carolina declining to submit an application; no reason was provided in the email. However, it appeared that they had considered the Work as two other people (Matthew Fisher and Mark Jennette) were cc'd on the email.

United Power Contractors

Andy Canales left a voicemail thanking LCMC for the opportunity to submit an application; however, UPC was not looking to bid on any projects outside of the United States.

Wilson Utility Contractors

Carmen Reed acknowledged receipt of the application; however, after further review, Wilson representatives determined that CT0327 conflicted with another project. In addition, their current backlog of projects would also be a barrier for them to competitively bid.

Flatiron-Cobra

Even though Flatiron-Cobra had been approved to bid on CT0319, Flatiron indicated that they were more interested in other RFPs and wanted to be upfront with that information, and subsequently did not submit an application.

nalcor	Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
energy LOWER CHURCHILL PROJECT	CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

Thirau

An email and voicemail was left for Alain Gagne (with no response). Thirau did not submit an application for CT0319.

GLR

An email and voicemail was left for Martin Chagnon (with no response). GLR declined to bid on CT0319, indicating that they had just been granted a 110km 735kV line project and were unable to start another big contract.

4.5 PASSING APPLICANTS

The following Applicants have successfully passed the commercial, technical, environmental, quality, and health & safety review and were moved into Phase II of the Bidder Selection Process:

- Abengoa / Inabensa
- Barnard Canada
- Emera Utility Services
- Isolux Corsan
- Kenny Construction Company
- Kiewit
- RS Line / EC Source
- Valard Construction

The following provides a synopsis of the capabilities of each of these applicants:

Abengoa / Inabensa

Abengoa T&D is based in Arizona and Inabensa is based in Seville, Spain. Both entities are subsidiaries of the parent company Abengoa who according to ENR is globally the largest transmission line constructor.

For the purpose of the HVdc scope, it is expected that both entities would form a consortium with 50/50 participation upon an award. Abengoa T&D was an approved bidder for CT0319. Abengoa is a major player in the industry with an impressive work history, including HVac project experience with lines almost 1000 km long, and are the only Applicant to have significant HVdc experience – a 2412 km, 600 HVdc, bipole line with a 2282 AAC conductor. Abengoa has not undertaken any transmission projects in North America, rather has

Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

concentrated their business towards concessions and EPC contracts for large renewal projects, including solar projects. Unlike some of their activities in South America and Europe where they self-perform line construction, their business model in North America is predicated upon establishing themselves in the T&D business as a large EPC or general contractor, using local firms as subcontractors to construct the line.

It should be noted that Abengoa is one of three applicants who currently owns the stringing equipment required for the large conductor planned for the HVdc line.

Barnard Canada

Barnard Canada is a major civil contractor with an impressive number of contracts including linear infrastructure projects; however have minimal transmission line experience. Barnard's business model for the HVdc line is to act as a large General Contractor and engage subcontractors to undertake the field construction scope. However, Barnard's lines subcontractor, Powertel, lacks lattice tower experience.

Barnard has a strong financial capability and is prepared to bid up to \$400M alone, and up to \$1B with a pre-qualified Joint Venture. They have indicated that their bonding capacity could cover that range as well.

Emera Utility Services

Emera Utility Services was an approved bidder for one (1) segment on CT0319. Historically Emera has performed many smaller projects and has strong Canadian utility experience with cold weather and some helicopter experience. Emera's application was given strong scores (≥75%) by the Technical, Health & Safety, and Environmental reviewers. Emera has not performed any projects of the scale of this project and has limited experience with lattice towers within the last ten years.

Isolux Corsan

Isolux Corsan was an approved bidder for CT0319. Isolux Corsan is based in Madrid, Spain, but has an office in Austin, Texas. Isolux Corsan have a business model that is very similar that or Abengoa, one where they are heavily engaged in both Power Concessions and the EPC business.

Isolux Corsan has undertaken some very large transmission projects; three of the four projects listed are greater than or equal to Section 1, with one project 1200 km in length. As the Isolux

	Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
7	CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

pre-qualification package was very generic it is difficult to ascertain their capability to undertake the entire DC scope, however given their global EPC and TL capability and financial capacity, they should be further investigated as part of a Phase II assessment.

Kiewit

Kiewit is a major general contractor with a tremendous amount of Canadian northern construction experience. Further, they have some relevant, but limited, line construction experience. Kiewit indicated that they would like to do the complete Section 1. However, the longest similar line they constructed was 217 km, so 610 km would be pushing new boundaries, but with their vast construction capability they are considered to be capable of undertaking Section 1, from a technical evaluation perspective. Innu-Kiewit Constructors was an approved bidder for CT0319. However, they declined to bid on CT0319 due to the number of bidders invited to participate on CT0319. They have not provided a copy of their financial statements, but have indicated that they would provide them upon execution of a confidentiality agreement.

Kenny Construction

Kenny Construction Company (KCC) is a Chicago-based general contractor with decent projects experience listed. They appear to have experience building access in mountainous areas as a general contractor. However, they are a general contractor and would need to team up with a line contractor. KCC has listed Valard as a subcontractor, but it is unclear if they have had any discussions with Valard. KCC has passed the technical prequalification, based upon their past experience as a construction management firm rather than an actual line constructor, but their lines contractor would need to be evaluated carefully during Phase II screening.

RS Line / EC Source

Initially EC Source sent an email indicating that they would partner with RS Line. Their application was also received with RS Line's application in the same email. RS Line is based in Alberta and is owned by the parent company, Remcon Ltd, which is based in Saskatchewan. EC Source is based in Arizona and is owned by the parent company MasTec, which is also based in the United States. EC Source appears to have some relevant transmission line project experience and even has a small fleet of helicopters used for construction. EC Source also has experience constructing lines in mountainous terrain. RS Line is a known major Canadian lines contractor, with some 900 employees, currently engaged in Altalink's WATL transmission project. RS Line is one of three applicants who currently own the proper stringing equipment required for the large DC conductor.

nalcor	Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
energy LOWER CHURCHILL PROJECT	CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

Valard Construction

Valard Construction is a subsidiary of Quanta Services (acquired in October 2010). Valard was an approved bidder for CT0319. Valard is a well-known major Canadian Lines Contractor who could do the full Scope of Work. Valard is one of three applicants who currently owns the proper stringing equipment required for the large DC conductor.

4.6 APPLICANTS FAILING TO QUALIFY / NOT RECOMMENDED

Transelec-Arno

Transelec Arno is a small Quebec-based company that has relevant northern Canadian construction experience. However they lack experience or the capability for building lines exceeding 100 km, given their small ~100 person organization. Their low technical score is not necessarily a reflection on their technical abilities but a reflection of limited answers. Transelec-Arno failed to provide information in English and was non-responsive when asked for additional supporting documents. As a result, this company failed the safety evaluation. Transelec-Arno would be a better fit as a subcontractor, assuming that they would follow the prime contractor's safety procedures and systems.

PowerTel

Powertel, based in Whitefish, ON, has relevant transmission line construction experience and an impressive fleet of tracked vehicles. However, PowerTel lacks significant lattice tower experience or has not built large projects in the past. Further, they lack the financial capability to take on a single segment, as their bonding capacity appears to be maxed out at \$40M. PowerTel was acceptable to the Quality and Health & Safety reviewers. However, PowerTel did not provide the supporting Environmental documentation to achieve a passing score. PowerTel would be a better fit as a subcontractor, but their environmental systems would need to be carefully evaluated beforehand.

4.7 RECOMMENDATIONS FROM PHASE I SCREENING

The following Applicants passed Phase I screening for a <u>single segment</u> and are to be further explored in the Phase II screening process.

nalcor	Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
energy LOWER CHURCHILL PROJECT	CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

Barnard Canada

Based on Barnard's application, it is recommended to limit their work to one (1) segment, unless they propose a more experienced line constructor. With the proper lines subcontractor Barnard could be a major asset with their excellent construction experience.

Emera Utility Services

Although Emera has performed a lot of projects and has relevant Canadian utility experience with cold weather and helicopter construction, they have not performed any projects of this scale. In addition, Emera has limited experience with lattice towers. Based on this information, it is recommended that Emera be limited to one (1) segment.

Kiewit

Although Kiewit is a major general contractor with a tremendous amount of Canadian northern construction experience, the longest line that they have completed is 217km. Kiewit indicated that the parent company would not provide a parent guarantee and did not disclose the subsidiary's financial information. Without being able to assess the financial stability of this division of Kiewit, they are only recommended for one (1) segment. However, if their proposal demonstrates an ability to finance more than one segment then it may be possible to remove this constraint.

Kenny Construction Company

KCC appears to have relevant project experience and has been very successful as a General Contractor, in particular their experience on the Trail project in Pennsylvania, that is consistent with the requirements of this Scope of Work. However, without knowing who their line contractor will be, at best they would be able to undertake is one (1) segment as a general contractor. As such we are cautious about their capability; however they should be further assessed during the Phase II screening process.

The following Applicants passed Phase I screening for <u>all of Section 1</u> and are to be further explored in the Phase II screening process.

Abengoa / Inabensa

Abengoa is a major player in the industry with an impressive work history both for AC and DC transmission lines. Their environmental score indicates that their experience with environmental compliance may be weak and should be carefully evaluated. Key uncertainties relate to their execution model in the North American market and use of subcontractors.

1 nalcor	Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
LOWER CHURCHILL PROJECT	CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

Isolux Corsan

Isolux Corsan has performed some large transmission projects outside of North America, larger in scope than this project and therefore could in theory perform the full Scope of Work. Key uncertainties relate to their execution model in the North American market and use of subcontractors.

RS Line / EC Source

RS Line is a known major Canadian lines contractor and EC Source is known in the United States. Based upon the Phase I screening, it is viewed that both companies should be able to take on the full Scope of Work.

Valard Construction

Valard Construction is a subsidiary of Quanta Services and is a known major Canadian Lines Contractor who could perform the full Scope of Work. Their quality score, however, was low and should be carefully evaluated prior to any award.

The following Applicants are conditionally recommended as Subcontractors:

Both Transelec-Arno and PowerTel were responsive to the Application for Bidder Selection process, but did not meet the requirements for CT0327 due to weaknesses in their procedures and systems (as described under Section 6.3). Further, given the perceived need to attract skilled labour for the Project, it is recommended that after the RFP is released, the Contract Administrator notify these two companies, directing them to the list of Approved Bidders, in hopes that they become potential subcontractors.

energy LOWER CHURCHILL PROJECT	CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

5.0 BIDDER SELECTION: PHASE II SCREENING

5.1 PHASE II SCREENING PROCESS

With strong consideration of the complexity of the HVdc transmission line construction program, the Project Team defined a number of key attributes that any pre-qualified contractor selected for the bid list should have. These are:

- Technical depth and breadth
- Winter construction and remote access experience and capability
- Proficient in helicopter construction techniques
- Ability to be self-reliant in remote regions
- Access to an experienced labor pool
- Stringing experience with very large conductor
- ROW clearing and access management capacity
- Financial capability to finance the work (working cash flow)
- Ability to provide an adequate level of performance security

5.2 APPLICANTS FOR PHASE II SCREENING

As indicated in Section 4.5, the following Applicants were recommended to move into Phase II screening for further exploration:

- Abengoa T&D / Inabensa
- Barnard
- Emera Utility Services
- Innu-Kiewit Constructors
- Isolux Ingerieria
- Kenny Construction
- RS Line / EC Source
- Valard Construction

nalcor	Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
energy LOWER CHURCHILL PROJECT	CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

5.3 OBSERVATIONS FROM CT0319 EVALUATION

The Request for Proposals (RFP) for CT0319 — Construction of 315kV HVac Transmission Line: Muskrat Falls to Churchill Falls was issued on 28-Sep-2012. Of the eleven (11) bidders invited, responses received from four (4):

- Abengoa / Inabensa
- Emera Utility Services
- Isolux Corsan
- Valard Construction

Of these four (4) bidders, Emera Uility Services bid on only 125km of line due to capacity, while both them and Isolux Corsan were rejected due to price that was twice that of the other bidders. Of the remaining two (2), Abengoa/Inabensa was evaluated as having an unacceptable execution plan.

A summary of the findings from the CT0319 evaluation is provided below, while further detail is contained in the Bid Award and Recommendation for CT0319.

Abengoa

Abengoa was shortlisted for detailed negotiations during CT0319; however their proposal gave LCMC many concerns. The following details both the Strengths and Challenges of the Abengoa proposal.

In summary, Abengoa did not present an execution plan that demonstrated that they truly appreciated the work, or were capable of organizing themselves to undertake the work. Specifically, Abengoa planned to subcontract approximately two-thirds of the scope, while they did not identify their selected subcontractors due in part to the inability to obtain reasonable pricing. This is seen as a fatal flaw for the scope of this complexity and location.

Strengths

- Bid all possible combinations
- All Agreement Article issues were resolved
- Based upon their track record outside of North America, the scope was within their general capability
- Appeared to listen to our concerns and be willing to address them (evident from our last meeting held on 1-Aug-2013)
- Agreed to make changes to the scope in an attempt to lower the price

Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

Challenges

- Proposal was generic i.e. it lacked site-specific considerations. Despite repeated requests to specifics on how Abengoa would undertake the work, in particular foundations where they proposed to use a local subcontractor (to be named). As a general statement Abengoa could not produce an Execution Plan that was scope or site specific. This was considered a fatal flaw.
- Execution plan was heavily reliant on subcontractors (68% of contract value was subcontracted), most of whom Abengoa had not had previous working experiences
- Showed uncertainty when asked to think outside the box when developing execution plan
- Did not convince LCMC that they could adequately transfer their global capability to achieve success in cold Canadian environment
- High number of labour hours across all activities
- Allowed for no work during peak winter months
- Foundations complete misalignment on resources for the work they indicated 15 crews, each with 17 workers, but yet only installing 2 foundations per day. Presentations always referenced truck cranes and rubber tire backhoes leaving us suspect of the site specificity of their proposal.
- Appeared unsure about the access plan (note what was presented was trivial)
- Bid was higher than our budgeted amount
- Came forth with minimal technical or execution options that could reduce cost
- Abengoa totally reliant on IBEW for sourcing of labor big risk given TL activity in N.
 America
- Familiarization with the Canadian market was weak and were ill equipped to answer specific questions
- Achieved a low score in Health and Safety (lowest of four bids) see attached
- Low score in Provincial Benefits
- Labour availability was an identified risk

Emera Utility Services

Emera bid only one section (or 125km) of the MF to CF line, indicating that they did not have the capacity to take on both sections, but preferred to have the Eastern section if they were awarded. Although PowerTel did not submit a proposal, they were proposed as Emera's subcontractor for the line construction.

Emera's execution plan was predicated upon construction only during non-winter months, which in the opinion of the evaluation team was a fundamental flaw given that winter months afford much easier access to remote and normally inaccessible areas.

Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

In addition to the concerns re Emera's execution plan, due to the fact that their normalized price was approximately 150% that of either Abengoa or Valard, Emera were not short-listed for detailed clarification discussions.

Isolux Corsan

Isolux submitted a proposal for both the Eastern and Western sections of the line. Overall, Isolux has provided a proposal that is very generic in nature. They have provided an organizational chart and resource loading that is adequate with the project's expectations, however it seems that nearly all resources are sub-contracted out. In short, technically Isolux scored the lowest out of the four (4) bidders.

Isolux Corsan's normalized price was highest of all four (4) bidders and more than double that of either of Abengoa or Valard, it was decided not to shortlist them for further clarification discussions.

Although their proposal was not competitive, Isolux were invited to St. John's on 19-Apr-2013 for LCMC to understand what was driving their proposal price. This meeting revealed that Isolux viewed the number of unknowns in the area re labor, logistics and weather as key risk areas that were driving their price proposal.

Valard Construction

Valard Construction was the successful bidder under CT0319 providing both the best price and technical execution plan for the work. In short, their proposal was substantially ahead of the other three (3).

5.4 LESSONS LEARNED FROM CT0319

From the bid and negotiation process for CT0319 a number of key lessons learned were discovered which influence the contracting strategy for the HVdc transmission line. These were:

- Few players have the capability or risk appetite to take on large-scale, remote projects
- International contractors generally tend to have a business model which includes subcontracting a greater portion of the work to local contractors, which tends to be cost prohibitive
 - Contrary to this, Valard self-performs the entire scope

nalcor	Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
energy LOWER CHURCHILL PROJECT	CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

- International contractors presented generic execution plans which have inherent risks
 - Limited depth presented by either of Abengoa or Isolux-Corsan
- Selected contractor offered significant cost reduction opportunities
 - Value engineering and constructability input
- Only one entity demonstrated the capability to undertake the work, planning to almost exclusively self-perform thus removing risk
- Splitting access and clearing from construction clearly inserts completion risk into execution, thus the adjustment to CT0327 contracting strategy

5.5 MARKETPLACE ISSUES AND TRENDS

From this bidder selection process that has spanned approximately 18 months, a number of marketplace issues and trends have been observed that are influencing the recommended bidder list for the construction of the HVdc transmission line. In summary, the key points are:

- All potential market players were engaged in HVac EOI
 - Extensive pre-qualification process and eventual bid list that resulted in only four (4) bids, from which two were deemed suitable for shortlisting.
- Few companies have the breadth and depth of resources to handle segments of this work, let alone the entire scope
 - 2 major line contractors in Canada Valard and RS Line
 - Most US-based and international contractors do not have experience working in remote regions or appreciate how to construct transmission lines during winter months, rather look to seasonal programs.
- Significant contactor market consolidation in last 5 years
 - Both within Canada and US
 - Quanta has the largest electric utility contractor workforce in North America; further is the leading transmission and distribution contractor in Canada
- Difficult to attract US entrants into NL given buoyant renewables and rebuild market in US

nalcor	Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
energy LOWER CHURCHILL PROJECT	CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

- Canadian market is very busy, however current projects are drawing to a close in late 2014
 - BC and Alberta projects are coming to a close
 - No significant scope on radar within Quebec
- Major players will likely be consumed by pending projects
 - Manitoba Hydro's BiPole III 1400km of 500kV HVdc
- ROW clearing largely subcontracted
 - Required scope for HVdc would consume all local capacity + more
- Required labor is not available from union hall either provincially or nationally, but the pool of required labour is largely employed by a few large contractors.
 - Working in union (IBEW, CUSW) and non-union settings
 - Significant wage pressure (Alberta 14% increase in 2013)
- Kiewit has questioned the viability of walk-to-walk IBEW agreement for Transmission line construction in Newfoundland and Labrador.
- It is proving very difficult by all utilities in Canada to find qualified contractors and qualified owner staff to manage those contractors, thereby pushing folks to larger packages in some instances.

Phase II Evaluation Conclusions (Post CT0319)Abengoa

LCMC met with Abengoa on 28-Jan-2014 on its request to be debriefed on the CT0319 bid. Senior executives of the Abengoa team, including Jim Corboy, Enrique Barreiro, Javier Ramirez, and Fernando Inostroza, attended this meeting.

Abengoa confirmed that the civil works (access and foundations) was a key risk area for them and that they were unable to source reasonable prices from local subcontractors, hence decided to bid on their strength only. Abengoa also confirmed that their general business strategy is to act as the General Contractor or EPC contractor and to partner with local subcontractors rather than acquire or develop specialized capability that may be required for a particular jurisdiction. This model provides great concern for LCMC in this current market where qualified Transmission contractors are very difficult to find. In the US, Abengoa's transmission activity is centered on small interties that are required as part of a larger renewable plant (e.g. solar) that they are constructing under a concession framework.

Based on the fact that Abengoa's strategy had not changed and for all of the reasons outlined in Section 5.3,the LCMC team had and still has great concerns about Abengoa's ability to execute in this jurisdiction.

nalcor	Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
energy LOWER CHURCHILL PROJECT	CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

MasTec (EC Source) / RS Line

On 7-Feb-2014 LCMC met with MasTec/EC Source in St. John's to review their capabilities with respect to bidding on the HVdc transmission line. RS Line / Forbes Brothers was scheduled to participate in this meeting, however MasTec officials indicated that RS Line declined to attend due to fact that they "are still discussing the structure of our relationship."

EC Source is now owned by Mastec, a company of 14,000 employees founded in the telecommunications sector in the mid-1970's. They have been transmission line business, largely using an EPC model, since 2009. They have undertaken projects up to 100 miles long in the US, but never in Canada. In the US they largely self-perform, however plans to use a subcontract model in Canada. Other key observations include:

- EC Source does not have any arrangements with an actual line contractor
- Considers themselves a "Program Management Entity" offering PM and CM services
- For HVdc line, would subcontract all of access, ROW clearing, civil works, tower erection and camps. EC Source have line stringing equipment, but it was very uncertain whether it was either suitable for our conductor or if they planned to mobilize it to Canada.
- Proposed helicopter installation strategy no apparent appreciation of the need for access or the remoteness of the work.
- Does not have access to pool of skilled labor, rather would endeavor to secure internationally.

From the presentation it was apparent that Mastec does not have the capability to undertake this scope, and that adding them to the bid list would substantially increase the risk of non-completion of the transmission line by mid-2017.

Kenny Construction

In consideration that Kenny Construction's business model is to act as a General Contractor, LCMC does not view it has having the credentials to construct such a large complex project without the support of a major contractor such as Valard, for which they do not have a commercial arrangement.

In July 2013 LCMC engaged the services of Kenny Construction (now a part of Granite Construction) to both provide staff augmentation services and marshaling yard operational

nalcor	Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
energy LOWER CHURCHILL PROJECT	CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

services. As such, Kenny is considered conflicted from being a bidder on the HVdc transmission scope.

Isolux-Corsan and Kiewit

LCMC met with representations of both Isolux-Corsan and Kiewit in St. John's on 14-Nov-2013. Isolux-Corsan and Kiewit have formed a 50/50 JV in order to bid the HVdc transmission line scope, which Isolux believes will address their construction shortfalls since its business model is to act as EPC or GC and subcontract the work. This is the first time either of these entities has worked together; LCMC considers this a risk.

Since bidding CT0319, Isolux has captured a smaller transmission line project as part of a larger SaskPower \$150 million project, as well winning \$200 million of contracts in Brazil. Kiewit does not presently have any active transmission projects. The JV's desire is to undertake the entire 1100km of transmission work.

Kiewit has never built a transmission line under a wall-to-wall IBEW model and is skeptical of whether it will be successful since in their view it "has not been tested in Newfoundland." LCMC observed this same mindset during the bid clarifications for CD0501 – HVdc Converters.

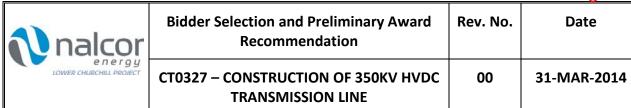

In short, while LCMC are confident in Kiewit's capability to bid as a general contractor, their pricing proposal for labor as demonstrated for both CH0007 – Intake, Powerhouse and Spillway Construction and as the civil contractor for ABB's bid for CD0501 HVdc Converters begs the question as to whether they would be the spectrum of what it takes to be competitive.

When these concerns are added to the recent bid information on Isolux for CT319 as outlined in Section 5.3, the LCMC team does not believe this JV can execute this work, and definitely not in a competitive manner.

Barnard

Based on the fact that Barnard had not found an additional Transmission Line contractor since CT0319 where it was determined that they were not qualified the only conclusion to be reached for CT0327 is that they would not be able to execute any of the segments.

Emera Utility Services

Based on the assessment in CT0319 that Emera simply did not meet the qualifications necessary to execute a segment and the fact that there pricing was simply not competitive it was concluded that they were not able to execute any sections of CT0327.

Quanta Services Inc. / Valard Construction LP

Based on the CT0319 bid submission and further exploration of Valard's capabilities it was clear that they were capable of executing CT0327 and were competitive.

	CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

6.0 AVAILABLE OPTIONS FROM PHASE II SCREENING

With consideration of the extensive bidder selection process that occurred during Phases I and II combined with the results of CT0319 HVac Transmission Line Construction and the conclusion that only one organization is truly qualified at this point in time to execute CT0327 , LCMC believed there were practically three (3) available options to construct either CT0327 or the entire 1080km, each of which has pros and cons. They are:

- Option 1: Re-test Market / Bid Entire Scope to potential bidders identified out of Phase I
- Option 2: Pursue Open book Negotiated Agreement with Valard for Labrador, bid Island portion
- Option 3: Pursue Open book Negotiated Agreement with Valard for entire scope

Table 3 summarizes the primary benefits and risks of each of the three (3) procurement options.

Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date	
CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014	

Table 3: Procurement Option Summary

Option	Primary Benefits	Primary Risks
Option 1	Typical process that is transparent to all May get interest from companies who did not respond to HVac TL	 Marketplace interest in bidding – likely ends up with similar result as CT0319, but loss considerable opportunity time getting there. Contrary to Open-Book model, LCMC does not have visibility into estimate inputs – traditional beat-down model would result take a considerable amount of effort and resources, but in the end provide limited value to influence. Contractor contingency risk is likely higher Risk of multiple subcontractor mark-ups in bids presented by larger EPC firms Time to bid, which would likely loose fall 2014 start, plus LCMC would have to contract ROW and Access separately Removes further opportunities for constructability input in final material selection and design Could result in loss of capacity current pre-qualified contractor has available Loss of potential synergies with AC If successful, requires larger LCMC Construction Team to assume larger field coordination role to oversee multiple smaller contractor, thus aren't able to spend the necessary time focus on the big picture and long term project success. Having multiple contractors can result in more complex disputes as contractors may try to pin blame on others (the so-called "finger pointing risk") Breaking construction into multiple segments or scopes: may require additional internal resources to manage scope overlap and contractor coordination; and

Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date	
CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014	

Option	Primary Benefits	Primary Risks
		 may introduce competition among multiple contractors for the same labor resources, thus driving up labor costs.
Option 2	 Contractor-of-choice Self-performing contractor – can avoid multiple subcontractor mark-ups Ensures spring-2014 start for Labrador Synergize with HVac TL Quanta manage access and clearing in Labrador Reduction on contractor contingency by open book discussions Increases opportunity to reduce the size and cost of the LCMC oversight role. Transfers interface risk for ROW clearing to the TL contractor 	 Valard could not bid Island Lack of competitive bid for Labrador Time to bid Uncertain of who can perform Island Long Range Mtns could not commence in 2014 Removes further opportunities for constructability input in final material selection and design LCMC would have to pursue ROW clearing and access construction for Island separate from the line construction scope, thus adding an additional interface risk. Breaking construction into multiple segments or scopes: may result in multiple interface points; may require additional internal resources to manage scope overlap and contractor coordination; and may introduce competition among multiple contractors for the same labor resources, thus driving up labor costs
Option 3	 Transparent pricing structure with full disclosure and agreement on key inputs Self-performing contractor – can avoid multiple subcontractor mark-ups Provides the greatest opportunity for LCMC to influence the execution plan and methods upon which Contractor is using as inputs to the estimate Provides opportunity for open-debate on risk and 	 Lack of competitive bids •

	the LCMC oversight role – one contractor, with one way of doing business.	

nalcor energy LOWER CHURCHILL PROJECT	Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
	CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

With consideration of the above including but not limited to:

- the results of lessons learned and outcome of CT0319,
- the current marketplace trends,
- clear lack of qualified contractors,
- execution model concerns, i.e. subcontracting vs self execution,
- pending work elsewhere that would create capacity concerns if not acting upon quickly,
- challenges with splitting up the work, ie market constraints for owner management team,
- recent benchmark pricing,
- labour access concerns, and
- the desire to capture potential synergies with CT0319

it was decided to open discussions with Quanta/ Valard in an open book process to explore possibilities knowing that the three (3) options above would remain open.

Therefore, following LCMC's initiation, in October 2013 a Non-Disclosure Agreement was executed between Lower Churchill Management Company (LCMC) and Quanta Services Inc. to explore an Open-book Price Development / Closed Book Execution for the HVdc transmission line (reference Attachment 8). Key principles underpinning these exploratory negotiations included:

- Both parties believe that direct negotiations can get to a win-win endpoint for LCMC and Valard/Quanta.
- Both parties subscribe to collaboratively developing an open book price model with closed book execution
 - Will build up trust between the parties and allow for the mutual discovery of cost saving/sharing opportunities
 - Will allow Valard/Quanta to incent supervisory and workforce performance
 - The contract price structure is expected to be a combination of fixed price and unit rates for foundations Substantially similar to the CT0319 contract.

In initiating these discussions, LCMC prudently considered the outcome of the Phase I screening process, the complexity of the HVdc transmission line, and the above referenced considerations and learning. In assessing these, it was strongly felt that the most probable success path for LCMC would be to negotiate a fair and reasonable price with Quanta Services for the entire 1080km HVdc line given their marketplace dominance, capability and capacity to undertake the work in the relatively short timeline available but knowing throughout the process that the other options would still be available if needed. The open-book model would provide LCMC with true visibility into all estimate inputs, thereby allowing LCMC to strongly influence the price estimate for the work.

Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

These extensive open-book discussions led to a preliminary view of the potential cost and execution plan to undertake the entire HVdc scope being presented on 16-Dec-2013. In summary, Valard presented a sound execution plan with capacity demonstrated, there was good constructability and value-engineering input resulting in execution risk reduction, and they demonstrated an appreciation for the complexity of the undertaking.

nalcor energy LOWER CHURCHILL PROJECT	Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
	CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

7.0 RECOMMENDED CONTRACTING STRATEGY

With consideration of the pros and cons of the three (3) options reviewed in Section 6.0 and the outcome of the open book discussions, the LCMC considers that Valard Construction, as part of Quanta Services, is the only entity capable of constructing the entire HVdc transmission line or even the logistically challenging areas such as interior Labrador and Long Range Mountains.

Given the outcome of the Open Book process and the reasons outlined previously LCMC does not believe it would be in the best interests of the overall LCP to alter our execution plan for the HVdc TL to a model wherein LCMC are basically the general contractor managing several smaller entities to achieve the overall build program. LCMC does not have access to the necessary resources to implement such a model, further devoting its limited resources to achieve a successful execution of this model would distract from broader project delivery activities that LCMC must ensure a strong focus upon. The capability and capacity concerns alleviated by this model are clear and the preliminary pricing arrived at is believed to be directionally best value for the project when benchmarked against the results of CT0319, ie the team would fully expect others to bid higher.

Once reviewed this recommendation applies to the option of splitting up Newfoundland and Labrador as well. In doing so there would still be capability concerns in the market, interface and management constraints and loss of synergies with Quanta /Valard.

As such, it is recommended to aggressively pursue the satisfactory conclusion of a Negotiated Agreement using the open-book price negotiations with Quanta Services that was initiated in October 2013 under a Non-Disclosure Agreement. In short, this option presents the least total risk exposure for LCMC, plus provides the greatest opportunity to reduce the overall price.

These Negotiated Agreement discussions shall continue to consider all available options that can achieve LCMC's objective of balancing absolute cost against cost predictability.

nalcor energy LOWER CHURCHILL PROJECT	Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
	CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

8.0 AWARD RECOMMENDATION

8.1 ESTABLISHING THE OPEN-BOOK PRICE

As discussed in Section 5.7, Valard initially presented the results of its open book estimate and preliminary execution plan on 16-December-2013 (reference Attachment 10). In short, the estimated price was \$1,178 million, inclusive of access and right-of-way clearing. This estimate was premised on the latest quantities provided by LCMC during the open book process.

In LCMC's opinion, there was a significant amount of conservatism included in this initial open-book price, in particular with respect to ROW clearing and access construction. If we were to consider moving forward this would have to be reconciled.

On 23rd & 24th January 2014, a meeting was held in Edmonton to determine whether there was opportunity to close the gap on the continuous items. In attendance on behalf of LCMC were Jason Kean, Lance Clarke, Pat Hussey and Desmond Butt; attending on behalf of Valard were Victor Budzinski (CEO – Valard), Adam Budzinski (President – Valard), BJ Ducey (VP – Quanta), Gary Murphy (Advisor – Quanta), Jody Rideout (Project Director – Valard), Joe Malaney (Estimator – Valard), and Marc Ouimet (Clearing and Access Manager).

During the period of time between the 16-December-2013 estimate and this meeting, Valard had undertaken a review of its estimate and execution parameters which resulted in a number of smaller changes increasing the total estimate to \$1,182.5 million, broken down into:

- Right-of-way Clearing and Access = \$273.3 million
- Transmission Line Construction = \$909.2 million

From these discussions the potential of \$55 million in savings for the TL construction portion, plus an additional \$20 million in savings for an alternate rock foundation design were identified. Further agreements were reached on how to reduce the total cost of the Right-of-Clearing and Access. These included:

- Nalcor would direct award ROW clearing and access contracts thus remove Valard's mark-up of 15%;
- LCMC and Valard would jointly bid the scope;
- Valard would manage the ROW clearing scope post award; and
- Access would be optimized and payment would be on field actuals.

At the end of these sessions, we communicated to Quanta that although we appreciated their view of how tight the estimated price was considering the scope and inherent risk, we expected

Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

they would reduce their margin given the volume of work we could offer them. Without this we were in a grey-zone – the expected price still exceeded our expectations and we were unsure of the way-forward.

At the end of these meetings Quanta requested the opportunity for their CEO (James O'Neill) to meet Ed Martin to understand whether they may be provided with the opportunity. This meeting was arranged and subsequently held between Nalcor Energy (Nalcor), LCMC, Quanta, and Valard on the 24-Feb-2014, in St. John's, NL at Nalcor's Hydro Place office.

Attendees with the Nalcor and LCMC teams were as follows: Ed Martin (CEO – Nalcor Energy), Gilbert Bennett (VP – LCMC), Paul Harrington (Project Director – LCMC), Lance Clarke (Business Services Manager – LCMC), and Jason Kean (Deputy General PM – LCMC).

Attendees with the Quanta – Valard team were as follows: James O'Neill (CEO – Quanta), Duke Austin (COO – Quanta), Victor Budzinski (CEO – Valard), Adam Budzinski (President – Valard), BJ Ducey (VP – Quanta), Gary Murphy (Advisor – Quanta), Jody Rideout (Project Director – Valard), and Joe Malaney (Estimator – Valard).

LCMC's objective for these meetings was to determine whether Quanta were willing to reduce their profit margin for the scope from 15% to 10% or less as well as seek all opportunities to unlock potential value from the arrangement. In short, this was achieved, wherein Valard indicated the price for the TL construction would be \$820 million, reflective of a 9.0% profit margin. The parties agreed that the ROW clearing and access construction scope would continue to be pursued as per the outcomes of the 23rd & 24th January meetings. Details of the cost estimate are presented in Attachment 10.

8.2 MEMORANDUM OF UNDERSTANDING

A Memorandum of Understanding (MOU) between LCMC, Quanta Services, and Valard Construction was subsequently concluded from these CEO meetings (reference Attachment 11). In short the following was agreed during this meeting and articulated in the MOU:

• The execution plan, work schedule and management organization for the work will be generally consistent with Valard's proposal made on the 16th day of December, 2013, including the establishment of a Project Office in the City of St. John's from which control and management of the scope will be led by a full-time Project Director.

Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

- The Agreement between Valard and LCMC will be consistent with that of CT0319 –
 Construction of HVac Transmission Lines (MF to CF) executed on the 17th day of
 December 2013.
- Valard has agreed to reduce its price for the transmission line construction, excluding right-of-way (ROW) clearing and access preparation to \$820 million CDN, excluding the benefit of any savings that may be realized from alternate foundation designs (reference Attachment 1). It is understood by the Parties that this value is predicated upon a 9.0% target profit margin.
- LCMC fully believes that the estimated cost for ROW clearing and access construction can be significantly reduced from the original estimate of \$273.3 million CDN. LCMC and Valard commit to work collaboratively in order to optimize access and ROW clearing requirements and execution approaches in order to reduce the estimated cost for the scope, including building upon the agreements reached during the meetings that occurred on 23rd& 24th of January, 2014, in Edmonton, Alberta as documented in the attached (reference Attachment 2). Specific agreements included:
 - LCMC and Valard will work to define the preferred execution approach for the works, including evaluating all viable options including Valard self-performing, using clearing and access contractors, or other commercial alternatives.
 - In the event of using third party contractors, these will be bid and selected by Valard using an agreed procurement model. LCMC will hold such contracts, with direct paying obligations, while Valard will manage their field activity.
 - Valard act in the capacity of the General Contractor for all ROW clearing and access construction including providing camps, fuel, catering, medical support, HSE programs for all third party contractors.
 - o It is LCMC's intention to augment Valard's management of the scope by the secondment of key resources to Valard for the work.
- LCMC and Valard will continue to collaborate in order to develop materials staging and transportation plans that are in the best interest of both parties.
- Nalcor is unable to commit to other transmission works planned to be constructed before the end of 2017 in the Province by itself, affiliates or partners to Valard due to the likelihood that such works may be subject to the Public Tendering Act, however in either case Valard has agreed to maintain its targeted profit margin at 9.0% in any proposals involving such work.

nalcor	Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
energy LOWER CHURCHILL PROJECT	CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

- With respect to its proposal for package CD0502 Switchyards, Valard will adjust their proposal price to reflect a 9.0% target profit margin.
- The Parties will work together to explore opportunities for commissioning support that may be required by LCMC as part of the commissioning of the LCP.
- Valard's intentions are to establish, through its involvement in the LCP, a longer-term
 presence in the Province of Newfoundland and Labrador to provide technical capability
 in support of future capital and operational investment in the Province's electrical grid.

8.3 AWARD VALUE

Based on the above it is recommended that CT0327 – Construction of 350kV HVdc Transmission Line be awarded to Valard Construction LP for a Contract Value of **\$820 million** Canadian, excluding Right-of-Way Clearing and Access Works. This contract value will be confirmed as the final aspects of the MOU are concluded, including the costs of holdback, performance securities, and any adjustments resulting from final quantities (limited exposure).

It should be noted that all expenditures under this package are in Canadian funds, while the price is fixed and firm for the duration of the work, including all escalations for labor and commodities. It also includes all costs for rotational travel, which is to Valard's account.

For the transmission line construction, the agreement will essentially mirror the compensation structure of CT0319 – Construction of 315kV HVac Transmission Line, while commercial arrangements of the ROW clearing and access construction remains pending. In general LCMC and Valard will evaluate the optimal commercial structure for Valard to either self-perform and / or manage this scope, details of which are articulated in the MOU. Under any such arrangement, the value of Agreement CT0327 will increase to incorporate these scope additions.

LCMC target for ROW Clearing and Access will be set at \$200 million Canadian, while the commercial model to achieve the targeted price reduction from the \$273 million initially tabled by Valard will be finalized prior to the issue of a LNTP. Accordingly this Award Recommendation will be revised to reflect the final commercial agreement and award value.

This contract price is summarized in Attachment 12 (PENDING).

Table 4 provides a brief variance analysis against the DG3 Baseline.

Table 4: Variance Analysis against DG3 Baseline

Parameter (millions CDN\$)	HVac TL	HVdc TL
DG3 Budget	204.4	734.7
Scope Changes & Transfers	<u>28.2</u>	<u>138.8</u>
Revised Budget	232.6	873.5
Contract Value	258.2	1,020.0
Variance	25.6	146.5
	11.0%	16.8%

8.4 PERFORMANCE SECURITY

The form of performance security included in this Agreement is similar to that contained in Package CT0319 while, as indicated in the MOU, the value of the letter of credit will be subject to good faith negotiations. While the details of the Performance Security remain to be concluded, it will include:

- Parent Company Guarantee from Quanta Services
- Letter of Credit of suitable value to provide liquidity in the event of contractor default and the need to mobilize an additional contractor to complete a portion or all of the remaining scope.

LCMC with Nalcor Treasury will work with Quanta to optimize a security package that considers the need to balance the cost of the security as well as Labrador-Island Link Limited Partnership's exposure. Key considerations will include:

- Opportunities to optimize the security package with consideration of the total scope of exposure between CT0319, CT0327, and other potential work that Valard may be successful in obtaining (e.g. CD0502 AC Switchyards).
- Consideration of how the total exposure to either of Labrador-Island Link Limited Partnership or Labrador Transmission Corporation may change as the schedule progresses and work is completed (i.e. sections of the transmission line are completed).

nalcor	Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
energy LOWER CHURCHILL PROJECT	CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

- Quanta Services is a well-established, publicly traded company with 2013 revenue of \$6.5B and has no debt, and are able to offer an unlimited guarantee.
- Valard, in itself, is a financially sound (2013 revenue of \$1B) and reputable company known for their reliability on the job and with a history of finishing what they start.
- Materials will be free issued to Valard, therefore not posing any risk to the project.
- Valard has approximately 10% of its work subcontracted resulting in much of their costs utilizing their own labour. Work incurred would be paid as it progresses, thus making it difficult for Valard to holdback payment to its labour force or its subcontractor.

8.5 LIQUIDATED DAMAGES – MILESTONE GUARANTEED COMPLETION DATE

Liquidated Damages negotiated under the Memorandum of Understanding are as follows:

- 1. The scheduled date of Substantial Completion is 30 June 2017.
- 2. If Contractor achieves Substantial Completion within 15 days from the scheduled date of Substantial Completion (the "Expiry of the Grace Period"), no liquidated damages will apply.
- 3. If Contractor achieves Substantial Completion between 16 and 45 days inclusive after the scheduled date of Substantial Completion (July 16, 2017 to August 15, 2017 inclusive), Contractor shall pay Company as liquidated damages \$350,000 CDN for each day of such failure after the Expiry of the Grace Period.
- 4. If Contractor achieves Substantial Completion 46 days after the scheduled date of Substantial Completion (August 16, 2017), or later, Contractor shall pay Company as liquidated damages \$750,000 CDN for each day of such failure.
- 5. Contractor's limit of liability for liquidated damages payable by Contractor to Company will be a maximum of ten percent (10%) of the Contract Price.
- 6. All other terms and conditions regarding liquidated damages will be consistent, mutatis mutandis, with those of the Articles of the agreement between Labrador Transmission Corporation and Valard for the Construction of HVac Transmission Lines (MF to CF), effectively dated the 17th day of December 2013, being Agreement No. CT0319.

nalcor	Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
energy LOWER CHURCHILL PROJECT	CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

8.6 EXCEPTIONS TO AGREEMENT ARTICLES

Agreement CT0327 will have the same Articles as contained in Agreement CT0319, with one notable expectation, specifically a cap on liability to 100% of the contract value. The following is the agreed language contained in the MOU that will replace the Article 21.15 contained in CT0319 for CT0327:

"Notwithstanding anything to the contrary in this Agreement, the maximum aggregate liability of Contractor to Company for all Claims arising out of or connected with the Work or performance or breach of this Agreement shall be limited to the sum of:

- (a) one hundred percent (100%) of the total Contract Price; and
- (b) the amount of actual insurance proceeds received with respect to such Claims from insurance to be maintained under this Agreement, less any applicable deductible in respect of any proceeds received by Company under Contractor's third party liability insurance;

provided however that such limitation shall not apply in cases of:

- (i) Claims for personal injury (including death) for which Contractor is liable to Company or has a duty to indemnify Company under this Agreement;
- Claims for property damage or loss for which Contractor is liable to Company or has a duty to indemnify Company under this Agreement, except for damage to or loss of the Work;
- (iii) Contractor's fraud, willful misconduct or gross negligence;
- (iv) Taxes, fines and/or penalties imposed by any Authority for which Contractor is liable under this Agreement;
- (v) Claims for infringement of patents and/or other intellectual property rights, or breach of the confidentiality provisions of this Agreement;
- (vi) Claims for any environmental damage or loss for which Contractor is liable to Company or has a duty to indemnify Company under this Agreement or resulting from a breach of this Agreement by Contractor; and
- (vii) any other Claims by a third party, including any Authority, for which Contractor has a duty to indemnify Company under this Agreement."

nalcor	Bidder Selection and Preliminary Award Recommendation	Rev. No.	Date
energy LOWER CHURCHILL PROJECT	CT0327 – CONSTRUCTION OF 350KV HVDC TRANSMISSION LINE	00	31-MAR-2014

Holdback

As with CT0319, LCMC have a desire to optimize the Mechanism Lien holdback costs under Agreement CT0327 so as to reduce finance carrying cost. Details of the arrangement under CT0327 remain to be concluded as part of the broader discussion on the performance security; however it is mirror the concepts agreed under CT0319. In this Agreement, it was finally agreed by both the Valard and LCMC to withhold 10% of total contract value during the last six (6) months of the contract, in lieu of holding 10% from Day 1. This scenario would further satisfy any holdback concerns and would decrease the financing costs for Valard, which in turn would result in cost reductions for Labrador Transmission Corporation.

Question 2.3.2 Describe your expertise with building transmission lines in cold climate winter weather conditions.	Na experience	≥1 project or >75 km	≥2 project or ≥ 150 km	>3 project or >225 km	>4 project or >375 km	10
Question 2.3.3 Describe your expertise with building and using ice bridges in construction.	No experience	1 project or 1 bridge	3 project or 3 bridge	4 project or 4 bridge	5 project or 5 bridge	10
Question 2.3.4 Describe your company's experience with building transmission lines with very poor access.	No experience	1 project or >75 km	>2 project or >150 km	>3 project or >225 km	>4 project or >375 km	10
Question 2.3.5 Describe your company's experience with using helicopters in the construction of transmission lines.	No response	≥1 project or >75 km	≥2 project or ≥ 150 km	>3 project or >225 km	>4 project or >375 km	10
Question 2.3.6 Describe your company's expertise with managing, and in particular, training a large group of people from local communities.	Na response	>1 project or > 25 people at once	>2 project ar > 50 people	>3 projects or > 75 people	>4 projects or > 100 people	10
Question 2.3.7 Describe your company's experience working on projects with extensive environmental and regulatory compliance requirements.	No response	>1 project described or general info of a low level	>2 project described or general info of a medium level	>3 project described or general info of a high level	>4 project described or general info of a very high level	10
Question 2.3.8 On each of the transmission lines listed on the Table in Section 1, were foundations, tower erection, stringing or OPGW installation subcontracted out? Please indicate which items for the transmission lines where subcontractors were used.						
Question 2.3.9 How many lattice tower transmission lines can you build concurrently? How many lattice tower transmission lines are you currently building? indicate which items for the transmission lines where subcontractors were used.	No response	1 or more	1 or more but at least 150 km	2 or more and 275 km	3 or more and 610 km	10
Question 2.3.10 What was the maximum number of lattice tower transmission lines your company built concurrently in the past?	No response	1 or more	1 or more but at least 150 km	2 or more and 275 km	3 or more and 610 km	10
Question 2.3.11 Describe your company's experience with building transmission lines in close proximately to existing energized facilities.	No response or no experience	>1 project or >25 km	>2 project or >50 km	>3 project or >75 km	>4 project or >100 km	10

LOWER CHURCHILL PROJECT TECHNICAL SCORING GUIDE FOR: 505573-CT0327 Construction of 350kv HVdc Transmission Line - Section 1

			Scoring criteria			
Question Number	Very Poor	Poor	Neutral	Good	Very Good	***
	(Score=0)	(Score=20% of Max)	(Score=50% of Max)	(Score=80% of Max)	(Score=100% of Max)	Max Score
3.1 Has the applicant provided a proposed project and site organization chart?	No	Partial just project or Site - but not both	Full Project or Site - but not both	Full or partial Project and Full or partial Site, at least one full and one partial	Full project and site	5.
3.2.1 Does your Company have formal written policies, processes and procedures to select, qualify and monitor Suppliers and Sub-Suppliers?	No		No but a solid explanation of such a process		Yes	5
3.3.2 Does your company have formal written policies, processes and procedures to monitor its subcontractors, suppliers and sub- suppliers? Describe the process and procedures.	No		No but a solid explanation of such a process		Yes	5
3.2.2 Does your Company have free access to its Suppliers and Sub- Suppliers Plants, Productions, Manufacturing, Service or other Facilities for quality auditing, monitoring, inspecting or surveillance?	No		Not all but some		Yes	5
3.3.2 3.3.2 Please describe your proposed site facilities that would be used for the work, including the square measure of fabrication facilities, offices, repair facilities, laydown area, camp, warehouse space, wharfage or other facilities relevant to the Scope of Work of the Package for Prequalification.	No explanation	Some points explained but less than half of the points asked for explained	Half the points asked for explained	Most of the points explained but not all of the points asked for explained	All points asked for explained	5
3.3.3 Does your company currently own stringing equipment capable of string single conductor 3640 kcmll 91/0 ACS.	Missed or simply no		No. But can source one.		Yes	10
3.3.4 Please describe your work loading, for the facilities and equipment covered in this Section 3.3, during the timeframe in which the work described for the Package for Prequalification is to be performed. In addition please comment on your capacity to perform in the time frame indicated.	Missed or no explanation	Somewhat explained	About half explained	Mostly explained	Fully explained	5
3.4.1 Please identify the major or special items of work that you expect to subcontract.	Missed or no explanation	Somewhat identified from what would be expected	About half expected identified	Mostly expected identified	Fully identified on what would be expected.	5
3.4.3 Please submit a list of the software (or company internal systems) that you will use in the execution of the work. This should cover design, planning and scheduling, materials management (procurement, inspection, expediting and logistics), quality assurance and contract administration.	Missed or no explanation	Somewhat identified from what would be expected	About half expected identified	Mostly expected identified	Fully identified on what would be expected.	5
					TOTAL Maximum Score:	170

<u>Bidder</u>	Technical Reviewer's Comments
Abengoa / Inabensa	Abengoa is a major player in the industry with a very impressive work history. They have HVac project experience with lines almost 1000 km long. However, they were the only pre-qualifier to have significant HVdc experience - a 2412 km, 600 HVdc, bipole line with a 2282 AAC conductor. Abengoa is one of three pre-qualifies who currently owns the stringing equipment required for the large conductor. Depending on their proposal I would recommend them for all three sections.
Barnard	Barnard is a major civil contractor with a lot of impressive contracts including linear infrastructure contracts. However, they don't have a lot of significant line experience and the lines subcontractor that they listed lacks lattice tower experience. I would recommend limiting Barnard to one segment and certainly not the complete Section, unless they proposed a more experienced lines subcontractor. With the right lines subcontractor they could be a major asset with their excellent construction experience.
Emera	Emera has preformed a lot of projects and have good Canadian utility experience with cold weather and helicopter experience. However, they have not performed any projects of the scale of this project, nor have they lot of experience with lattice towers in the last 10 years. I would recommend limiting Emera to one Segment.
Isolux	Isolux has preformed some very large transmission projects, three of the four projects are ≥ Section 1, with one project 1200 km. Their low score is mainly a reflection of not really seriously answering the questions. They appear to be a major player and had a potential for a much higher score.

<u>Bidder</u>	Technical Reviewer's Comments
Kenny Construction Company	KCC is general contractor with some decent projects listed. They seem to have good knowledge regarding building access in mountainous areas. However, they are a general contractor and would have to team up with a line contractor. They list Valard as their subcontractor who is also prequalifying so I am not sure if they have had any discussions with Valard., however, they listed Valard, thus, I am not sure if they even checked with Valard. They pass the prequalification but we will still need to evaluate their lines contractor if they bid on this project. This will be taken care of in the Technical Question in the RFP, for all general contractors who choose a lines contractor that we have not evaluated. Without knowing who their lines contractors are going to be I am not able to define how many segments they are able to perform concurrently.
Kiewit	Kiewit is a major general contractor with a tremendous amount of Canadian northern construction experience. Further, they have some good, similar line construction experience. They indicate that they would like to do the complete Section. The longest similar line they constructed was 217 km, so 610 km would be pushing new boundaries for them, but with their vast construction experience they should be considered for the Section, technically.
PowerTel	Powertel has some good transmission line construction experience and an impressive fleet of tracked vehicles. What they lack is lattice tower experience. I would think they could handle one segment but not the full Section. They were also listed as the subcontractor for Barnard.
Transelec- Arno	Transelec Arno has good Canadian northern experience. What they lack is experience with lines exceeding 100 km. There low score is not necessarily a reflection on their technical abilities but a reflection of limited answers. I would recommend them for a single segment but not the section.

<u>Bidder</u>	Technical Reviewer's Comments
Valard	Valard is a know major Canadian Lines Contractor who could do the full Section. Valard is one of three pre-qualifies who currently owns the stringing equipment required for the large conductor.
RS Line / EC Source	RSL is a know major Canadian Lines Contractor who could do the full Section. RSL is one of three pre-qualifies who currently owns the stringing equipment required for the large conductor. ECSource's score is lower than it would have been if they answered all the questions. The are JV'ing with RSL and thus left some question blank indicating that RSL would take care of the answer. They look to have some good transmission line project experience and even have a small fleet of helicopters used for the construction. They also have some good mountain experience.

Question

Scoring Guide:

- 0 Question not answered or no relevant information provided in response
- 1 Response does not meet key Criteria
- 2 Response only meets a few of the key criteria
- 3 Response meets a majority of the key criteria
- 4 Response meets all key criteria
- 5 Response meets and exceeds key criteria

For Questions 4 - 13

- 5 Yes
- 0 No
- 0 N/A

NOTES:

- 1 Abengoa barely passed with the aid of info provided by its new partner (Inabensa)
- 2 Barnard has acceptable statistics and a reasonable program
- 3 Valard has a very strong safety management system
- 4 Isolux passed following areview of H/S information submitted for another project package (CT0319)
- 5 Kiewit has a high rate of MA's but a comprehensive safety management system
- 6 Powertel has a reasonable safety management system

KIEWIT

- 7 KCC has acceptable statistics and safety management system
- 8 Emera has barely acceptable statistics but a comprehensive safety management system

POWERTEL

- 9 Transelec failed based upon a lack of information provided now and during past submission
- 10 RS Lines/EC Source did not provide statistical data but were very comprehensive with submitted safety mgt system

Note: Abengoa was scored using the questionnaire and backup information from CT0319. Most backup information provided was actually that of Inabensa, eventhough insabensa provided their own responses to the Questionnaire. If Abengoa responded yes, however didn't provide backup, they were scored 2.5. Abengoa's and Inabensa's scores were averaged to get the final score, individual scores are included in hidden columns

Note: Powertel filled out the correct questionnaire, however backup information was taken from CT0319 Pre-Qual and wasn't complete. All questions that were answered "yes", but no backup provided were scored as 2.5.

Note: RS Line and EC Source scores were averaged to get the final score. Individual scores are included in hidden columns

Quality questionnaires were provided by Kenny Construction and Barnard. No quality questionnaires were provided by INABENSA or EC SOURCE, however, INABENSA provided an ISO 9001:2008 certificate and quality manual table of contents which are prerequisites for qualification. EC SOURCE provided a 686 page compilation of information including the technical questionnaire and copious detail on their environmental management and safety management programs, also provided was a Quality Control Manual. While they did not provide a formal response to the quality questionnaire, I reviewed the information provided to ascertain their approach to quality. It was evident that they provide quality management positions in their project organizational charts and make sufficient reference to quality processes such as supplier quality assessments in the procurement process, preventive and corrective actions processes and written procedures for core processes to allow evaluation for the EOI process. Pre-qualification responses from CT0319 were confirmed and added for POWERTEL UTILITIES, ISOLUX-CORSAN, TRANSELEC-ARNO, EMERA, VALARD CONSTRUCTION and PETER KEIWIT INFRASTRUCTURE.

CONTRACTOR PRE-QUALIFICATON SUBMISSIONS (E-FILES)

APPLICATION FOR BIDDER SELECTION

Date: December 6th, 2012

From:

VALARD CONSTRUCTION LP UNIT #5 - THIRD FLOOR 1697 BRUNSWICK STREET

HALIFAX, NS B31 2G3 **CANADA**

To:

Nalcor Energy - Lower Churchill Project

c/o SNC-Lavalin Inc.

350 Torbay Road Plaza, Suite 2

St. John's, NL A1A 4E1 Canada

Attention:

Micah Sze

Project No:

505573

Package No:

CT0327

Package Title:

Construction of 350kV HVdc Transmission Line Section 1

Dear Mr. Sze:

VALARD CONSTRUCTION LP hereby agree that:

(Official Name of Applicant)

- 1. After carefully examining the Bidder Selection documentation, we do hereby submit our Application for Bidder Selection to be a Bidder for the above referenced Package and enclose the following appendices as part of our Bidder Selection submittal:
 - Appendix 1 Commercial Questionnaire
 - Appendix 2 Technical Capability Questionnaire
 - Appendix 3 Health and Safety Questionnaire
 - Appendix 4 Environmental Questionnaire
 - Appendix 5 Quality Questionnaire

2.	response is in we con Attachmen	e not \boxtimes submitting this Application as a Joint Venture or Partnership. Where this the affirmative (check each box as appropriate): Infirm that we are the Lead Partner, and that each of the partners is identified in the state of the partners is identified in the state of the partners is identified in the state of the state of the partners is identified in the state of the state
3.	The name and may be contact	d the position of our representative who is coordinating this Application, and who sted for further information, as required, is as follows:
	Name:	Vicki Marks
	Position:	VP, Eastern Canada
	E-mail:	vmarks@valard.com
	Tel:	416-455-9579 cell

- 4. We confirm that we have read and fully understood all of the information supplied with the Bidder Selection Document. In particular, we confirm that if we are invited to bid on the Lower Churchill Project:
 - we will comply with the Company's standards with respect to Health and Safety in the workplace, and fairness with respect to all bidding;
 - we will comply with the Lower Churchill Construction Project Benefits Strategy.
 - we will sign a Non-disclosure and Conflict of Interest Agreement prior to receipt of the Request for Proposal Documents.
- 5. We confirm and certify that the information submitted in this Application for Bidder Selection is true and correct.
- 6. We understand that the Engineer will need to verify information in the Application, as required, and we hereby confirm that your representatives are authorized to communicate with any person identified in the Application and Appendices.
- 7. We also confirm and acknowledge that:
 - Company and Engineer shall have no liability whatsoever, for any costs, expenses, charges or losses which we may incur or be required to expend in the preparation or presentation of this Application for Bidder Selection.
 - Our submission of this Application shall not convey any right to be included on the final Bidders List; and it will be Company's sole right to determine the final list of qualified bidders to be included on said Bidders List.
 - While the information submitted is not for general publication, it may be used as necessary for the purposes of Bidder Selection.

SIGNED on this 6th day of December, 2012
For and on behalf of:

FORM	1 1.1 - APPLICANT FXPFRIFNCF	Frror! Bookmark not defined

Application For Bid Reglect Appendix 2 – Technical Questionnaire
Package Number: CT0327

1.0 WORK EXPERIENCE

- 1.1 Applicant is requested to Use Form 1.1 (attached) to record previous experience. Use one sheet for each contract.
- 1.2 Applicant is requested to list all contracts undertaken in the last 5 years which are similar in nature and complexity as this Package.
- 1.3 If the Applicant is a joint venture, Applicant is requested to list for each partner of the joint venture all contracts undertaken in the last 5 years by the said partner, and which are similar in nature and complexity to the work that will be performed by that partner.

2.0 TECHNICAL SPECIFIC

2.1 The purpose of this section is to establish the Applicant's recent (post year 2000) line construction experience. Please ensure that the table provided below is filled out with the requested information, as this information will be used in the technical evaluation. Please ensure that the table is as complete as possible. The Applicant may expand the table, as required to supply the requested information, or may supply the information in a separate document. Please ensure that the information is presented in a format that is easy to assess.

Application For Bid Reglection
Appendix 2 – Technical Questionnaire
Package Number: CT0327

Table 1: Applicant's new transmission line construction experience, since year 2000															
Client/ Owner Name	Project Name/ Location	AC/DC Voltage (kV)	Line Length (km)	Single or Double Circuit	Conductor Per Phase	Conductor Size	OPGW	Guyed Steel Towers	Self-Supporting Steel Towers	Wood Poles	Start and Finish Dates	Remote Camps	Were helicopters used, if so describe	ROW Clearing	Project Value

Package Number: CT0327

2.2 Table Definitions

Client/Owner Name: Client's name and the owner of the line, if different.

Project Name/Location: The project name as known to the owner of the line and the location of the line construction.

Voltage (kV): The voltage of the line and indicate whether it was ac or dc, i.e. 400 kV dc **Line length (km):** The kilometers of the line constructed.

Single or double circuit: Indicate if the line was a single circuit (S/C) or a double circuit line (D/C).

Cond. per phase: The number of conductors per phase.

Cond. Size: The conductor size of the line.

OPGW: Whether the line had OPGW or not, if so, give a brief description the OPGW installed.

Guyed Steel Towers: Whether the line had guyed steel towers (Yes, No).

Self-supporting Steel Towers: Whether the line had self-supporting steel towers (Yes, No).

Wood Poles: Indicate whether the line had wood poles (Yes, No).

Start and Finish dates: The start and finish date of Contractor's line construction – month, Year (i.e. May 2000 to Jun 2001).

Remote Camps: Indicate whether remote camps were required and if your company had to erect and manage the camps for the crews working on the line. Please describe the buildings and facilities and general operations of the camp.

Were helicopters used, if so, describe: If helicopters were used describe their use (i.e. moving materials, moving workers, erecting towers, pulling the pilot wire, etc.).

ROW Clearing: Indicate whether the main ROW clearing was a part of Contractor's: scope of work; Contractor directly supervised the clearing contractor, or the ROW was cleared by others.

Project value: The value of your company's portion of the work.

If the Applicant's scope of work for the project had multiple lines on different structures, list each line separately in the table.

Application For Bid Regglect Appendix 2 – Technical Questionnaire
Package Number: CT0327

2.3 Technical Specific Questions

2.3.1 List the equipment with year, model, hours and whether it is owned or rented that is available to you for the construction of the transmission lines. Include any pertinent details such as capacity, size, power rating, reach, speed, etc.

Please find attached listing of Valard-owned equipment.

Our substantial fleet of transmission line construction equipment is further augmented through the use of short and long term leases as required.

It is also our practice to utilize equipment available through local companies in the vicinity of the project area in order to ensure efficiency as well as to provide economic support and involve the local community in the project activities.

In addition to Valard Construction's large fleet of equipment, we also have access to Quanta Services' equipment pool – the largest fleet of utility-specific equipment in North America.

2.3.2 Describe your expertise with building transmission lines in cold climate winter weather conditions.

Valard has an extensive history of completing projects during winter and in areas where work can only be done in "frozen/winter" conditions.

- 1) ATCO Electric Brintnell to Wesley Creek 240 kV, 100kms, start Jan 14/08 completed April 20/08 Northern Alberta
- 2) ATCO Electric Wesley Creek to Meikle Line. Construction of double circuit 240kV steel towers in Northern Alberta; 125km with 97 km completed in 84 days, January through March 2009
- 3) ATCO Electric Dover to Whitefish 340km of 240kV lattice steel double circuit and steel H-frame structures in Northern Alberta; constructed over a single winter.
- 4) All Fort McMurray projects
- 5) Victor Mine in Northern Ontario (James Bay Lowlands); 415km of 115kV line constructed largely over 3 winters
- 6) BP Noel Dawson Creek, BC; 70km 138kV line
- 7) Northwest Transmission Line BC Hydro
 This project is being constructed year-round; through the winter in Northern BC
 during cold and extreme snow conditions. Environmentally sensitive areas around
 the Skeena River are being constructed in the winter to eliminate environmental
 risks.
- 8) Suncor Firebag Transmission Line in Fort McMurray Alberta. Construction of 50km of 230kV lattice double circuit. This line was built cross-country with 4 access points constructed.
- 9) Manitoba Hydro Herblet to Ralls 165km 230kV constructed in the Canadian shield over two consecutive winters with only a single mid-point access.

Of the dozens of Major Projects completed by Valard in the past 10 years, the majority have been in extreme climates. While these project conditions have included dangerous forest fire conditions, the most frequent extreme conditions are those experienced from winter temperatures.

Valard's experience in these conditions, coupled with extraordinary personnel has allowed Valard to complete all projects we have participated in, on time and without incident, regardless of the conditions.

Application For Bid Reglection
Appendix 2 – Technical Questionnaire
Package Number: CT0327

2.3.3 Describe your expertise with building and using ice bridges in construction.

Valard has constructed in excess of 1,000 km of winter roads on various projects throughout Canada. We have extensive project experience where access for construction was based on the utilization of frozen muskeg, ice roads and ice crossings These include ice roads over lakes, muskegs and river crossings that have played a crucial role in enabling projects to move forward with equipment, material and supplies, as the sites were otherwise inaccessible. These roads have been constructed to allow transportation for anywhere from a few weeks to several months before they become unusable. With the use of Hydraulic Engineers, ice profiles and the results of deflection tests Valard's construction teams can build to, and perform activities, as per the requirements of the works with sound and safe access designs.

Winter Roads have been of particular importance on the following projects:

- ATCO Electric Wesley Creek to Meikle Line
 Construction of double circuit 240kV steel towers in Northern Alberta
- Manitoba Hydro Herblet Ralls 230 kV Transmission Line
 With substantial portions of the project inaccessible accept in frozen conditions, the construction necessitated the use of winter roads and accelerated construction in order to deal with the late starting and early ending construction season.
- Victor Transmission Line
 Much of the 415 km transmission line covered swampy areas that were only capable of supporting travel in frozen conditions. The Winter roads were essential for both supply and construction with organization of the project work revolving around the progression of thawing throughout the project area.
- BP Noel
 Sections of the 70 km line were only accessible in frozen conditions. Due to environmental restrictions, a push to complete sensitive areas with Winter Roads substantially reduced the cost of swamp matting.
- Yukon Energy Corporation Carmacks to Stewart Stage II
 One month to complete 30 km of transmission line work in various distributed permafrost areas prior to Spring Breakup.
- Suncor Firebag Transmission Line in Fort McMurray Alberta.
 Construction of 50km of 230kV lattice double circuit. This line was built cross-country with 4 access points constructed.

Application For Bid Regge Confidence Appendix 2 – Technical Questionnaire Package Number: CT0327

2.3.4 Describe your company's experience with building transmission lines with very poor access.

Virtually the complete list of our project history is reflective of works performed with very little, if any, pre-existing access. The Use of ice/frost for access construction is commonplace, ice crossings and bridges are fairly standard, and Valard has constructed many "matted" access systems when the cold has not presented itself or in non winter conditions for swampy areas.

2.3.5 Describe your company's experience with using helicopters in the construction of transmission lines.

Valard has a significant amount of experience utilizing helicopters in our construction work. Our experience ranges from using helicopters to transport personnel and equipment into areas that are difficult to access by land, using helicopters to transport tower structures into inaccessible areas, and using helicopters to string/install conductor.

Please refer to Table 1 for the listing of projects that utilized helicopters in different aspects of the construction works.

2.3.6 Describe your company's expertise with managing, and in particular, training a large group of people from local communities.

Valard is a self-sustaining / self-performing construction company; with respect to resources however we employ a proactive approach in engaging a local workforce and local enterprises when completing projects that are adjacent to communities. Specifically, Valard's approach includes:

- a. Filling positions with qualified persons that are available;
- b. Hiring reliable and certified equipment from local owners and entrepreneurs;
- c. Subcontracting enterprises that have the demonstrated capacity and experience to provide services as required.

Because of the depth of Valard's workforce, we are able to provide a large number of skilled leaders to transmission projects, and these individuals are in turn well-equipped to provide the necessary mentoring and leadership to train inexperienced new hires in entry level jobs at the outset of the project. Valard has an excellent record of not only training new personnel, but also maintaining a good safety record while training is

Application For Bid Regge Coronaire
Appendix 2 – Technical Questionnaire
Package Number: CT0327

taking place. On a recent project in the Fort MacMurray region, Valard flew approximately 100 First Nation personnel from its previous joint ventures to complete the tower assembly activities. This project was completed with zero lost time and zero reportable incidents.

Valard has a long history of engaging local First Nations communities in major projects in a meaningful way, creating and sustaining employment, and providing contracting opportunities. In many instances, Valard will prepare large local and aboriginal population segments for future opportunities by hiring and assigning them to other projects that Valard has underway. We currently have groups of Cape Breton Mi'kmaq training in Alberta; Gaspe Mi'kmaq training on our Hanna (Alberta) Project; Manitoba Cree working and training in all regions of the country. Our programs are hands-on in all respects with trainees being mentored in all elements of transmission line construction. The end result of this activity has local residents prepared for employment when the project in their home region begins. Many of the training positions become full apprenticeships. Valard currently has two hundred apprentices under their employ; that program is managed by a professional Human Resource Management staff. This program is available for the Nalcor project and planning/discussions have already been underway for over a year.

Whenever Valard becomes involved in projects it enters into agreements with the impacted communities that specify the particulars of the pending relationship. Fundamental to these agreements are the commitments that each party makes to training and creating employment opportunities. Valard has several of these arrangements currently in place. In Northern British Columbia, we have a comprehensive agreement affecting eight First Nations and the independent Nisga'a Nation that specifies the number and term of the employee groups that we bring into the project. The training programs are sustained; they last throughout the life of the job and are portable beyond the end of the contract. Valard offers continuing employment to all employees that become proficient in their specialty.

In the Yukon, Valard constructed YEC's Carmacks-Stewart Landing Project in two separate phases under a 5-way joint venture with a local contractor and three First Nations. The project was executed on time and at its peak over half of the project complement of 60 personnel were local First Nation members. In addition to this, the project was able to place subcontracts in the small local communities (total population of approx. 600 people) in excess of \$2.5M, making a substantial contribution to the local economy.

In Manitoba, Valard in engaged in a Joint Venture with Fox Lake Cree Nation that is employment-based and co-managed. The long term nature of the projects in the region will result in local residents forming the bulk of the future employee base because of the training they will receive as a result of the Valard program.

Application For Bid Regectly
Appendix 2 – Technical Questionnaire
Package Number: CT0327

On a previous Manitoba project – the Herblet to Ralls Island Transmission Project – Valard was able to score a 96% local content score, owing to employing a large contingent of Manitoba linemen and combining that with labour for tower assembly that was exclusively local. The personnel trained on this project from the local Cree and Metis

communities have since been invited to travel to other projects in Alberta, BC and

Projects and potential projects in Ontario are covered by MOU's and Joint Ventures with eleven aboriginal communities (Lake Huron Anishinabek Transmission Corporation [LHATC] and Bamkushwada Corporation) and in each instance the core objective of the agreement is to create and sustain employment for major segments of the local population. Once underway, each agreement is managed with the employment and training milestones monitored and adjusted continually.

An MOU with the Eskasoni Band in Cape Breton is employment-based and highly successful. It is aimed at producing skilled linemen for potential employment in Cape Breton. That agreement has produced a group of nine new hires for Valard, all of whom are receiving their training in Alberta.

Valard has agreements with First Nations' communities that go beyond the technical elements of construction. With the LHATC we are preparing members of the community for the non-construction components of the regions' projects by offering scholarships in the engineering, environmental and business elements of the transmission business. Students are provided with scholarships to major Canadian universities.

Valard enters into extensive community consultation processes that are aimed at ascertaining the training and employment needs and then begins a negotiation process with local leadership intended to arrive at a partnership agreement that meets those needs. To the same extent, business opportunities are presented and those opportunities become a fundamental part of the agreement. The employment created by the business opportunities is significant and Valard works toward assuring the success of those ventures by providing management and mentoring support. The resulting indirect employment has a long term impact on the overall viability and economic health of the community.

Ontario.

Application For Bid Reglector

Appendix 2 – Technical Questionnaire

Package Number: CT0327

2.3.7 Describe your company's experience working on projects with extensive environmental and regulatory compliance requirements.

All of Valard's projects are subject to very stringent environmental and regulatory constraints. Whether on Crown or private lands, Valard has a dedicated team of Right-of-Way experts and Environmental Monitors to control and regulate construction activities. The NTL/BC Hydro project has been one of Valard's most comprehensive projects regarding Environmental sensitivities.

Valard has experience working on some of the most demanding environmentally sensitive projects in Canada. Northern British Columbia Projects demanded single drop reporting for spills; native areas in the Yukon required zero contamination commitments and organic farms saw extreme owner scrutiny to ensure continue Organic certification. These and all other challenges have been met by Valard in its commitment to the environment. Valard has a general policy to fully comply with environmental, health and safety regulations. The approach is to follow the most strict policies and procedures between client-specific, local, provincial or federal.

Valard has been in cooperative compliance with our clients and has been successful in the completion of our works under a wide variety of conditions. These are some examples:

- BC Hydro Northwest Transmission Line (currently underway). Valard is responsible for the Logging and Right of Way preparation as part of our full EPC contract. Valard is currently managing and mitigating environmental issues such as raptor nesting, grizzly bear hibernation/dens, salmon spawning streams, other fish bearing stream conditions, mountain goat ungulate areas, moose ungulate areas, caribou migration zones, rare amphibian areas, fisher nesting zones, hundreds of stream/river crossing conditions, working on islands on river crossings, protected volcanic/lava areas, sensitive archaeological sites, and many no-equipment zones to mitigate, to name a few.
- AltaLink/SNC Lavalin South West River Crossing Foundations. Involved in the mitigation and access through rattlesnake hibernation areas, rare grasses, noxious weed areas, migratory bird nesting zones, and highly sensitive archaeological sites. There was also a huge risk to manage regarding grass fires during spring time.
- ATCO Electric All projects in the regions of Northern Alberta are subject to moose and caribou ungulate zones requiring timing restrictions for the completion of work. Extreme environmental constraints such as "winter construction conditions" requiring significant coordination of manpower,

Application For Bid Regec Appendix 2 – Technical Questionnaire
Package Number: CT0327

equipment, camps and materials, as well as forest fire precautionary measures during summer work and the forest fire seasons.

- The BP Noel project had zero tolerance for even a drop of contaminants, stringent air quality requirements for the burning of woody debris during brushing, significant landowner issues regarding pastures/farmlands, immense access restrictions and siltation requirements regarding several rivers and stream crossings.
- 2.3.8 On each of the transmission lines listed on the Table in Section 1, were foundations, tower erection, stringing or OPGW installation subcontracted out? Please indicate which items for the transmission lines where subcontractors were used.

All tower erection, stringing and OPGW installation is and was performed by Valard Construction employees/personnel directly. These construction functions are part of our core competencies and are self performed.

Please refer to Table 1 for the detailed information requested specific to the foundation work self-performed and subcontracted out.

2.3.9 How many lattice tower transmission lines can you build concurrently? How many lattice tower transmission lines are you currently building?

Using only the resources currently at our disposal, Valard Construction can construct seven (7) major concurrent lattice steel transmission projects.

Making use of our client companies (other wholly-owned subsidiaries of the Valard Construction group of companies in Canada), we can construct ten (10) major concurrent lattice transmission projects.

Including the resources that we have access to through our sister-companies within Quanta Services, resources are in place to manage and construct in excess of one hundred (>100) concurrent major projects.

Valard Construction currently has three major projects in progress, with two additional projects to start over the winter months. Valard's controlled subsidiaries have an additional two transmission projects in progress. Of these projects, only 1 is anticipated to intersect the construction schedule of the Nalcor HVDC projects.

Application For Bid Regge Appendix 2 – Technical Questionnaire
Package Number: CT0327

Valard Construction represents Canada's largest transmission construction complement – we are actively seeking large projects to fill our backlog beyond 2013 in order to keep our local and national workforces busy.

2.3.10 What was the maximum number of lattice tower transmission lines your company built concurrently in the past?

As stated above: Valard Construction has independently constructed seven (7) concurrent major projects, with its client companies having previously supported three (3) concurrent projects for a total of ten (10). The total number of concurrent projects constructed by Quanta Services cannot be accurately estimated due to sheer volume. To put the company's capacity in perspective, on a recent project in Alberta, a single team constructed and strung 115km of double-circuit 230kV transmission line in three months, while the company was simultaneously engaged in six (6) other major projects including stringing of a 175km double-circuit, 4-bundle 500kV transmission line.

2.3.11 Describe your company's experience with building transmission lines in close proximately to existing energized facilities.

Valard Construction has extensive experience working with both crossings of energized lines and in parallel with energized lines. Many of the facilities that Valard has constructed and strung have been built in common corridors with existing energized facilities. The best recent example of this is the recent completion of the 180km Bruce x Milton project in the greater Toronto area. This project was constructed in a shared corridor that included 2 circuits of 500kV for its entire length and 2 circuits of 230 kV for over 100km. The calculated potential created by the 8km open-loop stringing segments on this project was in excess of 14kV, requiring that the entire project be treated as energized when it was being strung. This project, which required the placement of 4300 km of conductor, was completed with no lost time injuries. This is just a single example of dozens of projects that have required the construction of Faraday enclosures around the stringing operations and butt-downs. Further to this, Valard has completed crossings of literally thousands of energized facilities. To return to the Bruce x Milton project, this project included crossings of 340 municipal road corridors, almost all of which included an energized distribution line. At both ends and in several locations midway along the line, there were also energized crossings of 500kV and 230kV facilities. Valard Construction employs the largest contingent of journeymen linemen available for construction anywhere in Canada, and in any province can deliver capable tradesmen that are qualified to coordinate take work protection (clearances) or set holdoffs from the local utilities, and setup adequate protections (rider structures, rope bridges and enclosures)

Application For Bid Reglector
Appendix 2 – Technical Questionnaire
Package Number: CT0327

around energized facilities. In most cases, Valard is easily able to exceed locally required apprentice to journeyman ratios.

Valard also has a dedicated team of personnel that have been trained under Quanta Services' Energized Services program, and that are qualified to perform maintenance and construction activities directly on live facilities at transmission voltages as high as 345kV. These personnel are used both for dedicated live-maintenance programs underway by our clients, as well as being brought in occasionally by transmission construction crews to complete particularly technical crossings or modifications.

Application For Bid Reggec Appendix 2 – Technical Questionnaire
Package Number: CT0327

3.0 ORGANIZATION AND RESOURCES

3.1 Proposed Project and Site Organization Chart

3.1.1 Please provide your preliminary Project and Site Organization that would execute the scope of work of the Package for Prequalification. As a minimum the chart should show the positions for Project Manager, Quality Assurance Manager, Chief Design Engineer, Planning and Scheduling Manager, Material Manager (Including procurement, inspection, expediting and logistics), Site Manager, and the key area superintendents. Include CVs for the key roles including the number of years of experience that the individual has in the position to be filled.

Please find attached the proposed project organization chart

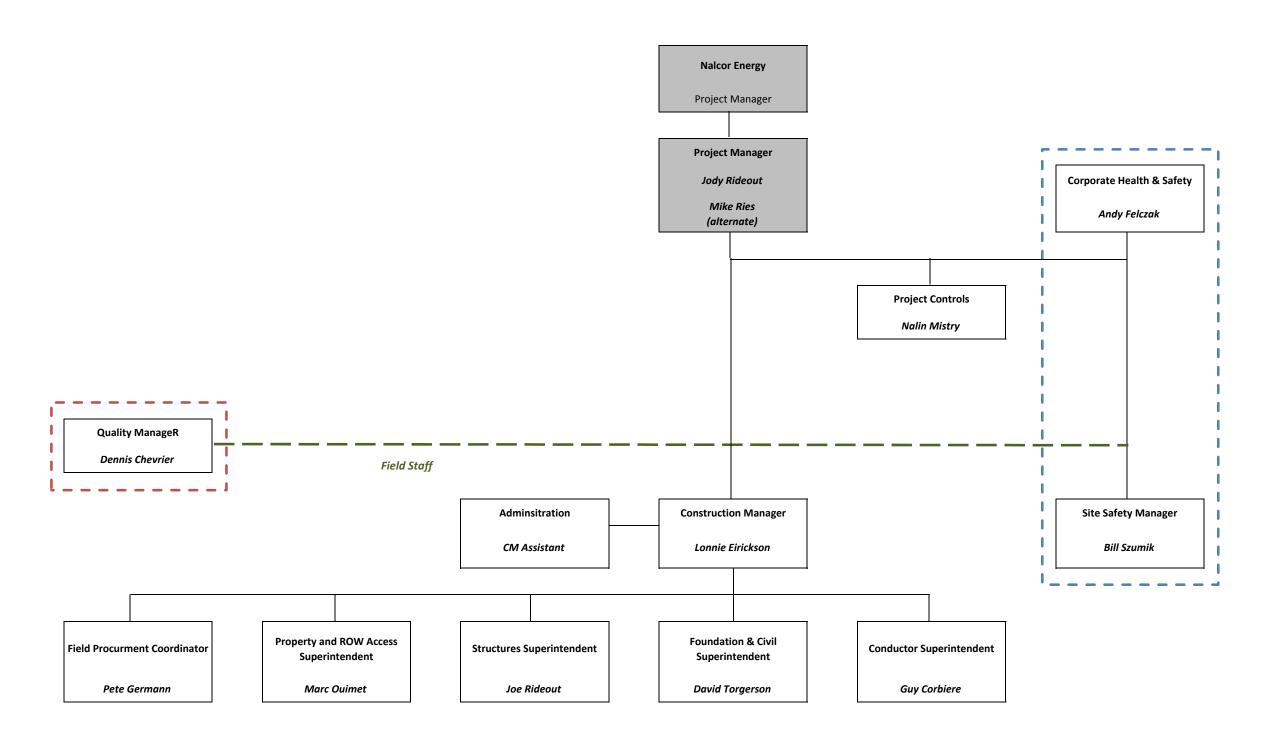

Please also see the CVs attached for each

Project Team Organizational Chart

Construction of 350kV HVdc Transmission Line

Package Number: CT0327

3.2 **Subcontracting**

3.2.1 Does your company have formal written policies, processes and procedures to select and qualify its subcontractors, suppliers and sub-suppliers? Describe the process and procedure.

Yes we do have written policies, processes and procedures to select and manage our subcontractors and suppliers.

Please see the attached Section 4 of our HS&E Procedures which describes our selection and qualification process for subcontracted services.

Section 3.2 of the attached Quality Program describes our management of materials supplied by subcontractors/suppliers.

3.2.2 Does your company have formal written policies, processes and procedures to monitor its subcontractors, suppliers and sub-suppliers? Describe the process and procedures.

Yes we do have written policies, processes and procedures to monitor our subcontractors and suppliers.

Please see the attached Section 4 of our HS&E Procedures which describes our process ongoing construction and safety monitoring of our subcontracted services.

Section 3.2 of the attached Quality Program describes our management of materials supplied by subcontractors/suppliers.

3.2.3 Does your company have free access to its suppliers, sub-suppliers and subcontractors plants, productions, manufacturing, service or other facilities for quality auditing, monitoring, inspecting or surveillance?

Yes, generally we have access to all supplier and subcontractor facilities when requested.

Application For Bid Regglec Appendix 2 – Technical Questionnaire
Package Number: CT0327

3.3 Off-Site Resources and Organization

3.3.2 Please describe your proposed site facilities that would be used for the work, including the square measure of fabrication facilities, offices, repair facilities, lay-down area, camp, warehouse space, wharfage or other facilities relevant to the Scope of Work of the Package for Pregualification.

The requirement for facilities will depend on the actual volume of work assigned to Valard through the contract (i.e. # of kms of line).

For similar projects, our project facilities have been set up as follows:

Repair facilities for Equipment/Tools:

We will set up a site/project specific maintenance facility that is easily accessible from various locations along the line route. In the case of longer/larger projects, we have and will set up additional facilities. These facilities are staffed with licensed mechanics to ensure timely and quality repairs.

Material Laydown Areas are set up per section or segment of work. A project of this magnitude may be segmented in as many as 8-10 segments. Laydown areas range in size depending on the location and what other uses the area may serve. For example, a 10 acre yard functions as a material laydown area but it also houses the camp, mechanical repair shop, fuel storage and access, and the office trailers. Most materials may be received here initially and then redeployed to the other laydown areas along the route. Smaller laydown areas that serve only limited functions are closer to 3 acres in size.

Project Offices are also set up along the line route. There will typically be one main office with smaller segment-specific offices located elsewhere.

3.3.3 Does your company currently own stringing equipment capable of tension string two pole, single modified Falcon 3640 kcmil ACSR conductors.. If not, how would your company obtain the required stringing equipment?

Valard Construction currently owns pulling equipment that would be suitable for pulling this conductor. At this time, we do not own the requisite tensioning equipment.

In the event of award, we have access to the stringing equipment manufacturing facility of its sister-company – PAR Electrical Contractors of Kansas City, MO. PAR has assembled and made use of comparable exotic tensioning equipment for specific client

Application For Bid Reglector
Appendix 2 – Technical Questionnaire
Package Number: CT0327

needs. Recognizing that Valard Construction is a major and substantial sister-company of PAR, the requirements of this contract/project would be treated as a priority within the manufacturing facility and the equipment will be made available to suit the construction/stringing schedule of this project.

3.3.4 Please describe your work loading, for the facilities and equipment covered in this Section 3.3, during the timeframe in which the work described for the Package for Prequalification is to be performed. In addition please comment on your capacity to perform in the time frame indicated.

As stated in Section 2.3.9, we represent Canada's largest transmission construction workforce and we are actively seeking large projects to fill our backlog beyond 2013. Although we do have a few projects confirmed for 2014, the majority of our larger projects are scheduled for completion in late 2013 and early 2014 ensuring that we have ample experienced resources and equipment available for this project.

Valard Construction is confident that using only its own resources it would be capable of completing the work described in this package for prequalification in the period specified.

Please refer to the information provided in Section 2.3.9.

Including the resources that we have access to through our sister-companies within Quanta Services, resources are in place to manage and construct in excess of one hundred (>100) concurrent major projects therefore being able to deliver the Nalcor HVdc project in the timeline specified is well within our capacity.

Package Number: CT0327

3.4 Site Resources and Organization

3.4.1 Please identify the major or special items of work that you expect to subcontract.

Type of Work or Service	Potential Sub-Contractor and Location
Camp	TBD
Construction	Local to Newfoundland and Labrador
OPGW	VistaCare – Halifax, NS
Fibre Splicing	
Right of Way	Utilize local resources and partnerships
clearing	We do have a relationship with Nukem Forestry

3.4.3 Please submit a list of the software (or company internal systems) that you will use in the execution of the work. This should cover design, planning and scheduling, materials management (procurement, inspection, expediting and logistics), quality assurance and contract administration.

Planning & Scheduling – we will use Primavera

Material Management – we utilize a system called Traker. We receive and send out materials to the field using this system. Purchase Orders (as required) are also generated using this system.

Contract Documents - We make use of a system called MFiles for all our documentation, drawings, contract documents, etc. This system is also used for Quality Documents.

Contract Administration: Valard manages its major projects in a proprietary database realized in FileMaker.

1.0 INTRODUCTION

Nalcor's environmental focus is on preventing pollution, complying with legislation, and continual improvement to ensure an environmentally responsible development. Nalcor's commitment is to be an industry leader in setting environmental standards in all areas of its work, and meeting these standards during Project execution.

To accomplish this, only Contractors / Suppliers who meet or exceed Nalcor's Environmental Standards shall be used. Accordingly, the Applicant is requested to provide information specified in this Attachment. This will help to evaluate the Applicant's Environment Management System for comparison against that of the Lower Churchill Project.

2.0 QUESTIONNAIRE INSTRUCTIONS

Please provide responses in the spaces provided. The completed Pre-Qualification Questionnaire and supporting documentation must be included in the Expression of Interest (EOI).

2.1 EMPLOYEE/PERSON HOURS

Please provide the average number of employees and estimated person hours for the last three years (including subcontractors)

Year	2012	2011	2010
Number of Employees	995	709	520
Number of Person hours	2,227,757	1,576,305	1,376,312

2.2 ENVIRONMENTAL (REGULATORY) COMPLIANCE

2.2.1 Please provide information on any violations, citations, orders, or incidents of non-compliance experienced by the Applicant and its subcontractors during the past three years.

<u>Ye</u> :	ar:	<u>2012</u>	<u>2011</u>	<u>2010</u>

Docum	ent D	Description			Health, S	afety &Env	rironm	ental Policy
Created By: A. Felczak		Doc. Numb	er	Health, Sa	afety & Enviro	nmenta	al Policy 1.00	
Date: Sept. 23, 2003		Revision:	7	Revised by:	A. Felczak	Date:	Jan. 7, 2013	

1.1 INTRODUCTION

Valard considers the safety of its employees, contractors and other related individuals to be of prime importance.

We are committed to providing a work place free of accidents, injuries or fatalities.

To this end, every reasonable effort shall be made in the interest of accident prevention to provide for safe and healthy working conditions and to eliminate hazards that can cause injury to workers or damage to environment, property and equipment.

The purpose of this program is to emphasise Health, Safety & Environmental practices for the benefit of all employees and to serve as a reference guide.

New technology, changing social values and legislative requirements demand that this manual remains dynamic through on-going reviews and input from experienced personnel. This activity is encouraged and appreciated.

1.2 Corporate Health, Safety and Environmental Policy Statement

It is Valard's policy to ensure that safe working systems are in place to enable the company to perform its operations in such a manner as to avoid as far as reasonably practicable, harm to its employees, sub-contractors and all others who may be affected by its activities.

Further to this, the company will strive for the highest practically achievable standards of safety, occupational health and environmental protection.

To assist in achieving these goals the company invites and welcomes all active support of its employees and in turn will ensure they have the required skills and support to meet this commitment.

Employees and sub-contractors on there part have clear responsibility to cooperate and continuously strive to achieve these high standards.

The company will review all applicable legislation annually to insure that this policy is in compliance to all legislation, based on the geographical area of work.

The following broad principles are to be used to achieve the company's policy:

- ◆To prevent all injures at the workplace.
- •To structure and maintain high standards of safety and provide for a healthy working environment.
- •To ensure the company's employees are informed, trained, and supervised to meet these standards and that their cooperation and responsibilities to achieve these standards are clearly understood.
- ◆To establish safe and environmentally sound working practices throughout its operations to ensure a safe and healthy workplace for all employees.
- •To be aware of statutory requirements and other published guidelines including the safe working systems of the company's clients, and ensure that all personnel comply with these requirements.
- •To revise the company's safety policy, safe work practices, procedures as often as is necessary.

Adam Budzinski

1.3 ENVIRONMENTAL POLICY

Valard is committed to acting in an environmentally responsible manner. We affirm our commitment to our stockholders, our employees, our clients, and our neighbours through the following policy:

Valard is committed to protecting human health and the environment through compliance with applicable Federal, provincial and local environmental laws and regulations and by continually striving to reduce the environmental impact associated with our operations.

We will achieve this commitment through the application of the following principals:

- 1. Valard will comply with all applicable environmental laws and regulations.
- 2. Valard will not create unacceptable new risks to the environment and will strive to minimize risks from existing environmental conditions.
- 3. Valard will strive to minimize the quantity and degree of hazardous waste resulting from its operation.
- 4. Valard will strive to become a leader in respect to environmental protection and enhancement.

Valard's Environmental Policy was adopted in 2002 and is applicable to all operations.

Adam Budzinski

President

Signed

Date:	Sep	ot. 23, 2003	Revision: 3 R		Revised by:	A. Felczak	Date:	Jan. 3, 2012

13.1 HAZARDOUS MATERIALS POLICY

Material Safety Data Sheets for all materials on site are to be maintained and shall be made available to workers. MSDS's must be dated within three years.

All materials shall be stored and used in accordance with information provided in Material Safety Data Sheets.

All Valard employees shall receive WHMIS training. Proof of this training shall be kept in the employee's file in the Office. Workers will be scheduled to receive refreshers if there are changes to the Program. This training shall include:

- Labelling of containers, and how to work with the controlled product safely, including required PPE that is required to handle the product.
- All controlled products that are placed in new containers must have a work site label attached as soon as the container has controlled product placed in it.
- All Controlled products must have a supplier's MSDS attached to it when the product arrives directly from the supplier.
- All labels must be legible, if they are damaged a new label must be attached
 with all of the original information on it. This must be done as soon as the
 damaged label is identified. This information must contain the following info:
 Procedures for safe storing, First Aid and emergency procedures required in
 case of a emergency of the controlled product.
- · Location of the MSDS binder.

WHMIS should be periodically discussed on site at the Health, Safety & Environmental Meetings to ensure all workers are reminded of labelling, storing and disposal procedures of materials presently on site.

The Area Supervisor is responsible to ensure that the First Aid Attendant (if applicable) has an above average WHMIS knowledge and has copies of all pertinent MSDS available, or they must be available to the workers who must be informed of the location of the documents. These can be made available to the workers in the following formats: Hard copies in the site lunchroom, site office, or on the Web www.valard.msdsbinders.com.

13.2 MONITORING WORKPLACE EXPOSURES

Agents potentially harmful to a worker's heath fall into one of three categories:

- 1. Chemical asbestos fibres, concrete dust, etc.
- 2. Physical noise, etc.
- 3. Biological urine and blood samples, etc.

ı	Docum	nent Description						٧	VHMIS Policy
С	reated	Ву:	A. Felczak	Doc. Num	ber	Health, \$	Safety & Envi	ronmen	tal Policy 13.00
	Date:	Sep	ot. 23, 2003	Revision:	3	Revised by:	A. Felczak	Date:	Jan. 3, 2012

In construction, chemical and physical agents are far more likely to be encountered.

Ambient dust and sound levels shall be measured as required by provincial Health, Safety & Environmental regulations. Refer to the provincial/federal safety regulations for further information pertaining to permissible levels and concentrations.

Before demolition work is started, a survey of building materials must be conducted to confirm that no toxic materials are present (i.e.: asbestos, PCB, lead etc.). This survey must be in writing and available on site for review by provincial safety inspectors or workers.

Any jobsite where workers may be exposed to any lead must be evaluated as to the work activity and a atmospheric test must be performed prior to any work activity commencing. No worker shall be exposed to concentrations higher than the Occupational Exposure limit as stated in the Provincial regulations. Where there is a concentration higher than 0.05 mg/cu. meter over an 8 hour exposure shall be trained in the work procedures and hazards of working with lead. These workers must wear the appropriate clothing and personal protective equipment to prevent any inhalation of any lead fumes.

Any jobsite containing asbestos materials must have an asbestos related Job Procedure in written form and all work must be in conformance with the provincial safety regulations.

13.3 WHMIS CLASSIFICATION

HAZARD SYMBOLS

There are eight symbols, which are designed to tell you at a glance the kinds of hazards that exist with a particular chemical. They are the following:

CLASS A - COMPRESSED GAS

Any gas or any liquid that boils at or below ordinary temperatures, in a pressurised container (regardless of whether it remains as a gas, turns to liquid, or is dissolved in another liquid).

CLASS B - FLAMMABLE or COMBUSTIBLE

There are six subdivisions of substances in this category, all capable of self-sustaining combustion in air with various degrees of intensity.

CLASS C - OXIDIZING MATERIALS

Substances (such as pure oxygen, chlorine, organic peroxides) that support the burning of fuels or of other materials capable of oxidation.

CLASS D1 - ACUTE POISONS

Substances capable of causing rapid death of a person exposed to very small amounts.

CLASS D2 - OTHER POISONS

Substances eventually causing serious illness of a person repeatedly exposed to small amounts, or substances able to cause sensitization of a person to further exposure.

CLASS D3 - INFECTIOUS MATERIALS

Organisms believed to cause disease, or the toxins of such an organism.

CLASS E - CORROSIVE MATERIALS

Any solid, liquid, or gas that can destroy the skin or eat through metals.

CLASS F - DANGEROUSLY REACTIVEA

A substance that may undergo an unexpected change (for example, producing heat, pressure, explosion, or toxic fumes) if simply subjected to heat, pressure, or shock or allowed to contact water.

Date:	Date: Sept. 23, 2003		Revision:	6	Revised by:	A. Felczak	Date:	Jan. 3, 2013

8.1 HEALTH, SAFETY & ENVIRONMENTAL MEETINGS

Health, Safety & Environmental Meetings are to be held as a minimum on a monthly basis. At some worksites the client may require these meetings to be held weekly. Every employee is required to attend.

Safety meeting topics can be drawn from pertinent Tailboards, Safe Work Practices and Procedures and Safety Topics as scheduled by the HS&E Department.

Items discussed at the meetings are to be recorded and submitted to the Corporate HS&E Manager for review. Issues raised during the meeting are to be resolved and the results reported to the workforce at the following meeting.

Valard and its subcontractors will hold joint meetings whenever practicable.

8.2 WORKER ORIENTATION:

8.2.1 NEW HIRE VALARD WORKERS:

All newly hired workers must receive a "New Worker Orientation" (Section 8.2.4) prior to commencing work on a project. All associated paperwork is to be forwarded to the Office, this includes all certificates to prove competency in the trade for which they are hired for. This includes any related training records. Workers will provide this information in order that it may be entered in the training database. A hardhat sticker will be issued to identify oriented workers.

8.2.2 VALARD WORKERS NEW TO JOBSITE:

If an existing employee is transferred to a new job site and has received Valard's "New Hire Orientation", a complete orientation will not be required. Instead the worker will be advised of site-specific hazards, requirements and emergency procedures before commencing work. A commencement form must be filled out so that the site has appropriate emergency contact information.

8.2.3 SUBCONTRACTOR WORKERS:

All new subcontractor employees must receive a "Contractor Worker Orientation" (Form # 8.6.1) prior to commencing work on a project. All associated paperwork is to be forwarded to Valard's Office. Subcontractor employees with proof of Valard's "Contractor Orientation" less than 1 year old will not require complete orientation. They will instead be advised of site-specific hazards, requirements and emergency procedures before commencing work.

Date:	Date: Sept. 23, 2003 Revision		Revision:	6	Revised by:	A. Felczak	Date:	Jan. 3, 2013

8.2.4 NEW WORKER ORIENTATION OUTLINE:

The purpose of this outline is to ensure that all new employees receive a consistent Orientation to Valard.

All employees orientated must sign Form Orientation Control Sheet.

ORIENTATION PREPARATION:

The following forms and booklets are required as a minimum:

- 1. Valard Employee Orientation (Commencement) Package containing the following:
- a. Employee Commencement Form
- b. Personal Tax Credits Return
- c. New Employee Orientation Form
- d. Medical Questionnaire
- e. Training information Form
- f. Vehicle Use Form
- g. Health Sign on Form (Short/Long term Disability etc.)
- h. HS&E Handbook

Employees are to view the following:

- o Valard's PowerPoint voice over Orientation Program
- Seven Steps to Safety program.
- o CSTS (If required by Client)
- o Any additional client required orientation
- Site Specific Orientation if on a large project
- 2. Sub Contractor Orientation (Commencement) Package containing the following:
- a. Subcontractor's PowerPoint Orientation
- b. New Employee Orientation Form.

Valard Employee's ORIENTATION:

Topics to be addressed and discussed

Trained supervisor's or site Safety advisers who have received training may conduct orientations.

- 1. Introduction: Introduce yourself and welcome employee to the company or project.
- 2. Explain how to fill out paperwork.
- 3. Open the Valard Orientation Power Point Presentation
- 4. Review the New Employee Orientation Form with workers and have them check off the subject boxes as each section is discussed and completed. Answer any questions the employee may have. The following outline is to be followed:

Docum	ent [Description		Ori	entation	/Training a	nd Me	eting Policy
Created	Ву:	A. Felczak	Doc. Numbe	er	Health, S	Safety & Envi	ronmen	tal Policy 8.00
Date: Sept. 23, 2003		Revision:	6	Revised by:	A. Felczak	Date:	Jan. 3, 2013	

Company History

Valard was founded in the Northwest Territories and since grown into one of Canada's largest General Power line contractor.

Company Health, Safety & Environmental Policy

Review the policy with the workers.

Responsibility for Safety

Safety is not only the responsibility of Management or Safety personnel. All workers are responsible for their own safety and the safety of others as per the Occupational Health and Safety Act.

Right to Refuse

No worker is to carry out any work that will cause imminent danger to himself or another worker as per the Occupational Health and Safety Act.

Imminent Danger is defined as:

- A danger which is not normal for that occupation, or
- b). A danger under which a person engaged in that occupation would not normally carry out his work.

All employees will receive training stating the process required to address unsafe work. **Process:**

- Worker perceives the work requested is unsafe.
- Worker is to report this to his immediate Supervisor.
- Work that is deemed unsafe will not be performed (MUST STOP) until an investigation is completed and work process has addressed the unsafe issues.

Worker who identified the unsafe work request shall not be reprimanded. Work refusal shall be documented and maintained by the safety department and entered in the Entropy database.

Right to Refuse Unsafe work process document shall be posted at each worksite including Shops and offices. (See page 20)

Supervisor

A supervisor is anyone who gives instruction or direction to workers.

The Supervisor is responsible to ensure that the entire Health, Safety & Environmental program is carried out.

Management

The President will provide the necessary resources to accomplish the objectives of the Health, Safety & Environmental Program.

Vice President of Health and Safety

Vice President of Health and Safety oversees the Health, Safety & Environmental Program and its effectiveness and compliance to the applicable Provincial and Territorial Legislation of the worksite location.

D	ocum	ent D	Description		Ori	entation	/Training a	nd Me	eting Policy
Cre	eated	Ву:	A. Felczak	Doc. Numb	er	Health, S	Safety & Envi	ronmen	tal Policy 8.00
D	Date: Sept. 23, 2003 Re		Revision:	6	Revised by:	A. Felczak	Date:	Jan. 3, 2013	

POLICIES/PROGRAMS

Modified Work:

Valard will make every reasonable effort to provide suitable temporary duties to assist in the rehabilitation and early return to work of employees who suffer a work related injury or illness. All work will be meaningful and will be approved by a physician. All workers are required to participate in Valard's Modified Work Program as a condition of employment.

Substance Abuse:

Valard's Substance Abuse Program is a term and condition of your employment. Read 16.3.1 Work Standards, 16.4.1 Alcohol and Drug Work rule, 16.4.4 Implementation of the program

Drug Work Rule:

Inform workers the complete Substance Abuse Program can be found in the Health, Safety & Environmental Manual and will be made available to them if they wish to review it.

Harassment/ Violence Policy:

Valard has a Harassment policy and a Violence Policy. If you are either harassed or subjected to violence then you must report it to you immediate supervisor, if he is not available then you are to call the VP of Health, Safety & environment at the Edmonton office

Environmental:

Valard will endeavour to prevent environmental damage on its work sites.

All spills or releases must be reported to your supervisor immediately so that a clean up can take place. Provincial and Federal environmental emergency reporting numbers are listed in Section 7

Observation / Near-miss Program:

Briefly explain the Observation program and show the workers the Observation card. Explain both the BBS side of the card and the Near Miss Reporting form on the reverse.

Emergency Problems:

Review the site emergency response plan with the employees. Ensure that they are informed of the location of first aid facilities, evacuation points and emergency communication devices (i.e. phone, radio, horns). Inform them of how to call for fire, ambulance and police/security response.

Incident Reporting:

It is of utmost importance that all incidents, injuries and near misses must be reported to your supervisor immediately so that they can be properly reviewed and preventative measures put in place to prevent recurrence. Failure to report incidents is considered cause for disciplinary action. If you injure yourself and have to go to a medical clinic/Hospital or any other medical facility such as a physiotherapist/ Chiropractor's office etc. you must inform the Edmonton office and complete a Worker's WCB injury report.

[Docum	ent D	escription		Orientation/Training and Meeting Policy

[Date: Sept. 23, 2003		Revision:	6	Revised by:	A. Felczak	Date:	Jan. 3, 2013			

GENERAL RULES

Horseplay, Fighting:

Horseplay and fighting are responsible for a large number of injuries and fatalities. Neither will be tolerated on any Valard Project.

Vehicle Operation:

No worker shall operate a vehicle in which he/she is not licensed or trained to operate.

Logbooks must be completed daily when operating any equipment over 4500 kg.

All rules and regulations of the road will be followed at all times.

Worker is to sign the Vehicle use policy form

(Inform employees of client's rules and regulations if applicable)

Theft:

Theft will not be tolerated and will result in immediate dismissal. Local law enforcement will be contacted.

MEETINGS

Tailboards:

A Tailboard will be performed at the beginning of each new task. Foremen will assist workers as necessary.

Safety Meetings:

All employees on site will attend a Monthly Safety Meeting, either Valard's, or in the case of subcontractors, their own. Subcontractors must forward a copy of their Safety Meeting minutes to Valard's Site Foreman.

(Inform the employees of the time and day that meetings are held)

SAFE WORK PRACTICES/PROCEDURES

General Housekeeping:

You are responsible for maintaining all work and storage areas so that they are neat, clean, organized and safe at all times. All equipment must be stored in designated area.

No garbage is to be left in any piece of Equipment.

You are responsible for the removal of your own waste materials, and must remember the following when dealing with wood scraps and waste:

- 1. Recycle rags, bottles, empty cans, cartons, wrappings and crates or properly dispose of them in approved waste containers. There must be no illegal or inappropriate dumping of debris, refuse, food scraps or any other wastes. All wastes must be transported and disposed of according to approved procedures.
- 2. Keep doorways, walkways, stairways and exits from buildings clear at all times.
- 3. Store all flammable substances to be used for the work (e.g., paints, solvents and fuels) on our property only in a location and manner approved by the company.

I	Docum	ent D	Description		Ori	ientation/Training and Meeting Policy				
Сі	reated	Ву:	A. Felczak	Doc. Numb	er	Health, S	Safety & Envi	ronmen	tal Policy 8.00	
I	Date: Sept. 23, 2003 Revision		Revision:	6	Revised by:	A. Felczak	Date:	Jan. 3, 2013		

4. Debris should be cleaned as it is created whenever possible; it is not to be stockpiled.

Scaffolds:

- All scaffolds must be erected by a competent worker or by a worker under direct supervision of a competent worker.
- All scaffolds are to be tagged as follows:

Please refer to Valard's Safe Work Practices and Procedures for more information.

Floor Openings:

- All Floor openings over 4" X 4" must be guarded as follows:
 - Guard-rails as per Part 22 of the Alberta OH&S Code Covered Openings 315(1) and/or
 - Covers installed. Covers are to be designed to carry two times (2x) its known load, marked "DANGER OPEN HOLE DO NOT REMOVE" and mechanically fastened so it requires a tool to remove.
 - o Part 22 of the Alberta OH&S Code Covered Openings 314(1)

Ladders:

- All ladders are to be used only as designed.
- Step ladders are to be used only in the fully open position and arms locked into place.
- The top two rungs of any ladder are not to be used.
- All ladders must extend 31/1 meter above all landing points.
- All ladders must be placed 1/4 ratio.
- All ladders must be tied off on top and if possible on the bottom.
- When not in use, ladder shall be secured or placed on the edge on ground.
- Please refer to Safe Work Practice 26.012.

Excavations/Trenches:

- No person is allowed to work in any excavation over 1.2 meters (4') unless the following:
- a. Temporally supported or,
- b. Cut back the side of the excavation to below 1.5 meter (4') height requirement.
- c. A safe means of egress/assess must be placed every 16 meters/52'5".
- d. All spoil piles be a minimum 1 meter/3'3" away from the edge.
- e. Refer to Valard's Safe Work Practice 26.037 on Excavation

Cutting/Welding:

- The appropriate number lens must be used.
- All oxygen and acetylene bottles to be stored in an upright position with caps on.
- All oxygen/acetylene cutting units to have flashback protectors.
- All welding that takes place at eye level shall have welding blinds installed to protect workers
- All oxygen/acetylene units are to broken down at end of every shift and caps replaced.

Docum	ent [Description	Orientation/Training and Meeting Policy						
Created By: A. Felczak			Doc. Numbe	er	Health, S	Safety & Envi	ronmen	tal Policy 8.00	
Date: Sept. 23, 2003		Revision:	6	Revised by:	A. Felczak	Date:	Jan. 3, 2013		

- A 20 pound ABC fire extinguisher to be placed within 30' of work area for all welding and cutting.

Refer to Valard's I Safe Work Practice 26.009 on Cutting and Welding

Manual lifting:

Poorly planned lifts often result in strains, sprains, falls and hernia type injuries. For safer lifting:

- 1. Prior to any manual lifting, moving, pushing handling, loading or hauling a hazard assessment is to be performed to determine the approximate weight of the object, to verify if mechanical lifting equipment may be required, As a minimum any material weighing greater than 75 lbs, it is recommended that more than one person or equipment be utilized to do the lifting. This equipment will be provided to the worker where the hazard assessment identifies the need for it. All heavy or awkward loads require a hazard assessment to identify the means used to lift and move the load, or the equipment required to lift it safely.
- 2. Plan your direction of travel; ensure that there are no obstacles and trip or slip hazards.
- 3. Use proper lifting technique, use your legs rather than your back muscles, and avoid twisting motions.
- 4. Regular stretching is recommended to prevent injuries
- 5. All work procedures will be reviewed in all cases where there was an injury whether soft tissue or musculoskeletal. All procedures will be reviewed whenever there are any injuries while performing a specific task.

Rigging:

- All rigging shall be done by a competent worker.
- All rigging shall be inspected daily.
- All rigging for critical lifts must be approved by an engineer.
- Refer to Valard's Safe Work Practice 26.006 on Cranes and Rigging

Hoisting:

- All loads must have a tag line unless it creates a greater hazard than not providing one.
- Signalmen must wear a high visibility vest or arm gauntlet for easy identification of the operator.
- Only C.S.A. approved slings to be used.
- Refer to Valard's Safe Work Practice # 26.006 on Cranes and Rigging.

Powder Actuated Tools:

- Only formally trained workers can use powder actuated tools. Courses are available through Trade Certificate or Manufacture Training.
- Any worker using the equipment is responsible to clean and maintain as per manufacturer's specs.

Refer to Valard's Health, Safety & Environmental Manual Safe Work Practice on Powder Actuated Tools.

Electrical Equipment:

- A competent worker must connect all electrical equipment.
- All workers to follow Safe Work Practice for Electrical Extension Cords.

Docum	ent D	Description		Or	ientation	/Training a	nd Me	eting Policy
Created	Ву:	A. Felczak	Doc. Numbe	er	Health, S	Safety & Envi	ronmen	tal Policy 8.00
Date: Sept. 23, 2003		Revision:	6	Revised by:	A. Felczak	Date:	Jan. 3, 2013	

Grounding:

- All tools and equipment to be double insulated or electrical grounded.

CSTS:

-CSTS is mandatory to work for Valard in Alberta/ British Columbia/Saskatchewan/Manitoba. Insert proof of training.

WHMIS:

- The site MSDS book is normally located in the jobsite office.
- All Controlled products to have proper WHMIS labeling.

Personal Protective Equipment

We understand that not all jobs are efficiently accomplished while wearing standard Personal Protective Equipment. If you feel that a task you need to perform cannot be reasonably accomplished while wearing all of the required PPE, it is your responsibility to arrange for a deviation BEFORE you begin working.

Contact your foreman, Area Supervisor or the Safety Advisor.

Head Protection:

- All site employees must wear a CSA approved Hard Hat (welders to wear hard hat combo).
- All Hard Hats are to be worn as per manufactures design.
- Certain Clients require CSA approved Side Impact Hard Hats.

Eye Protection:

- All site employees to wear CSA/ANSI safety glasses.
- All employees that wear prescription glasses must meet CSA- Z87 or over safety glasses are to be worn.
- All side shields must meet CSA standards. Hard side shields only.

Respiratory Protection:

- -Employees to wear respirators for controlled products as required on MSDS sheets.
- -All employees that require a half or full face mask must be fit tested prior to receiving mask.
- -Dust masks to be worn in all dusty areas.

Hearing Protection:

- Hearing protection to be worn in all areas that sound exceeds 85dba.
- A good rule of thumb is if you cannot hear a person talking in normal tone 3 feet away from you, you require hearing protection.
- Only use CSA approved hearing protection.

Foot Protection:

- Only CSA approved footwear (c/w green triangle and the Omega Symbol) with above ankle support is permitted on site.
- -All footwear that is badly worn must be replaced as soon as possible. i.e. Steel toes exposed, cuts.
- Boots designed for Ironworkers are not permitted on site.

Docum	ent E	Description	Orientation/Training and Meeting Policy						
Created	Ву:	A. Felczak	Doc. Numbe	er	Health, S	Safety & Envi	ronmen	tal Policy 8.00	
Date: Sept. 23, 2003		Revision:	6	Revised by:	A. Felczak	Date:	Jan. 3, 2013		

Hand/Body Protection:

- Glove use is mandatory at all times on Valard's Projects

Fall Protection:

- All employees to ensure full fall protection in place when their feet exceed 3.0 metres (10 ft.).
- Safety belts are not permitted, Full Body Harness with maximum 5' lanyard only. Except when climbing wooden poles where a Lineman's climbing belt complete with a choking pole strap and a Miller retractable lanyard.
- Refer to Valard's Safe Work Practice 26.028 on Fall Protection

As Valard's workers receive new tasks on an on-going basis any unfamiliar tasks will be fully explained by the Foreman. Supervision of Workers outlines in more detail training required for workers as well as provides reference materials for instruction in Safe Work Practices. All workers will receive training when required such as Respiratory, Forklift, and Fall Protection etc. This will be identified during a job specific Pre-Job Hazard Analysis prior to the start of each work site.

8.3 MANAGEMENT ORIENTATION:

In this section "Manager" refers to all Managers, QA/QC Personnel, Safety Advisors, Area Supervisors, and Foremen.

In order to ensure that Valard's Managers understand their Health, Safety and Environmental responsibilities, any new manager will receive an overview of the Health, Safety and Environmental Manual in a timely manner. This review will be conducted by the VP of Health, Safety & Environment or an experienced Safety Advisor and documented.

New Area Supervisors, Foremen and Safety Advisors hired by the company will be issued a copy of the Valard's Health, Safety & Environmental Manual and a copy of the Applicable Provincial/Territorial Occupational Health and Safety Act, Regulations and the appropriate Provincial Electrical Utility Code for reference.

8.6.2 – MEDICAL QUESTIONNAIRE (CONFIDENTIAL)

WELCOME TO OUR COMPANY AND OUR PROJECT

We are sincerely interested in the Health and Safety of all our employees.

In an effort to prevent or minimize potential occupational injury or illness to yourself and others while employed here in our workplace, please complete the following confidential questionnaire:

Please indicate your responses with a check mark.

	No	Yes	
1.	Do you have a hearing impairmed	ent?	
2.	Do you have high blood pressur	re?	
3.	Are you uncomfortable working	at heights?	
4.	Are you uncomfortable working	in confined spaces?	
5.	Do you have diabetes?		
6.	Have you suffered injuries to yo	ur back in the past?	
7.	Do you have epilepsy?		
8.	Do you suffer from any visual im	npairment?	
9.	Do you suffer from any repetitive	e strain injury?	
10.	Have you had an injury in the pa	ast that may affect your work?	
		ns or allergies? Are you taking any ld aware of? (If yes, please explain)	
	owledgement: I hereby verify the edge, and are my responses:	foregoing is accurate and truthfo	ul, to the best of my

8.6.3 SAFETY ORIENTATION ACKNOWLEDGEMENT

I understand that as a condition of my employment, I may be required to complete an employment, job related medical examination. This examination may include appropriate testing to determine the presence or absence of certain drugs or alcohol.

I hereby authorize Valard to conduct through its designated medical examiner said physical examinations as now and may be later determined by the company to be appropriate. I further authorize full release of all test results and medical information to Valard Construction Ltd., and will hold the company, its subsidiaries, their directors, employees, and agents harmless from any claims arising out of the information obtained through the medical inquiries or tests.

I understand that participation in the Modified Work Program is a condition of my employment at Valard

I have received and understood the Harassment and Violence Policies, which states that it is not acceptable and if I'm harassed or being subjected to violence I am to report this to my supervisor and the Safety Department.

RIGHT TO REFUSE

The following are the steps to be followed when raising a refusal to work due to imminent Danger:

Step 1:

The employee reports the situation to the Foreman or other appropriate management staff and the Safety Coordinator.

Step 2:

The superintendent or other management staff member investigates the situation in the presence of the worker, the Safety Coordinator (if available), or a person chosen by the refusing worker.

Step 3:

If the investigation results in improvement or clarification satisfactory to the worker, he/she returns to work.

If there is insufficient improvement or clarification and the employee still has reasonable grounds to refuse, the employee or the employer or both, notify the OH&S inspector.

Step 4:

The inspector examines the situation in the presence of the person named in step 2. The inspector gives an order either requiring improvements or requiring that the employee return to work.

Date: Sept. 23, 2003		Revision:	5	Revised by:	A. Felczak	Date:	Jan. 3, 2013	

12.1 EMERGENCY PREPAREDNESS POLICY

It is the policy of Valard Construction that all projects shall have in place an emergency response plan specific to the potential hazards of the project. For projects designated by the Corporate Health, Safety & Environmental Manager, emergency preparedness drills will be conducted. Valard Construction shall provide first aid facilities as required by provincial/federal regulations.

12.2 EMERGENCY/FIRST AID RESPONSE PLAN

To be effective, an Emergency Response/First Aid Plan must be tailor made for the site that it is intended for. Emergency Response needs should be discussed during the initial project hazard analysis and a procedure developed and made available to all employees.

Items that should be considered include:

- Legislated requirements for first aid training and facilities and
- Provide a plan to provide prompt First Aid to injured worker/s
- Distance of the site from an advanced medical care facility and time to reach a medical facility.
- Provide a Emergency Transport Vehicle if required
- A Level 3 first aid certificated attendant will be required
- Availability of client provided first aid and emergency resources
- Availability of Valard Construction first aid resources
- Location and availability of professional emergency services (fire, ambulance, police)
- Review types of injuries that may be incurred on the worksite
- If air transportation is the primary or only method for transporting an injured worker, before the start of operations in a workplace, arrangements must be made with an air service to ensure that an appropriate aircraft is reasonably available to the workplace during those operations, and a system in place in case of the unavailability of the aircraft the provider must notify the employer and a means of communication between the pilot and first aid provider if no medical assistance is not provided with the aircraft company.
- Special situations that may be encountered (e.g. confined space rescue, high angle rescue)
- Hazards specific to the work site (e.g. product releases at petrochemical facilities, work over water)
- Methods of internal communication available, radio, Sat phone, cell phone*, land line phone, horn, alarm etc.
- Methods of external (off site) communications (radio, Sat phone, land line, cell phone* etc.)
- Internal fire fighting capability

Docum	ent [Description				Emerge	ncy Pr	eparedness
Created	Ву:	A. Felczak	Doc. Num	ber	Health, S	Safety & Envi	ronmen	tal Policy 12.00
Date:	Sep	ot. 23, 2003	Revision:	5	Revised by:	A. Felczak	Date:	Jan. 3, 2013

- Emergency evacuation procedures and muster points
- Requirements for Environmental Spills (spill kits, absorbent)
- Contact numbers for Federal and Provincial reporting (OH&S, Environmental incident)

FIRST AID:

First aid equipment, supplies and facilities must be kept clean, dry and ready for use, and be readily accessible at any time a worker works in the workplace. Conspicuously posted signs at the work site will direct workers to where First Aid supplies are available. Locations of First Aid Kits are in each vehicle used on any site, and identified on each daily tailboard. This first Aid Kit must be kept in the interior of the vehicle to insure a clean and safe environment for storage.

First aid training will be provided by:

- EMP
- St. John's First Aid
- Canadian Heart foundation

Valard's policy is to provide First Aid Training to a minimum of 80% of their employees. This is due the fact that crews change at any moment's notice, travel to different work sites. This policy insures that every crew of 4 has at least 2 qualified first aiders. Training providers are to inform the corporate office of all workers' successful completion of training with supporting documentation; this will be inputted into the training database.

Where the site is more than 20 minutes from a medical facility a Mobile treatment centre will be based at the worksite.

When developing an emergency response plan See Emergency Preparedness Form and complete the required numbers and a list of contacts to call in the event of an emergency so that all employees are aware of it. This procedure must be posted in areas where workers are present such as lunchrooms, vehicles and the site office. This must be communicated and discussed with the workers for their input to insure their understanding and also discussed at the start of the job as well as during it. If required a list of the landing points for Stars or other aircraft to be able to locate must be identified on page 4 of an Emergency Preparedness Form.

This plan must be reviewed on a monthly basis as well when conditions or services change.

* It should be noted that cell phone communication is not ideal in all situations due to possible service disruption and the tendency for cellular towers to be overloaded with calls during widespread emergencies. An example of this would be the Pine Lake tornado disaster in Alberta, in which only one cell phone call was received by the local the ambulance service before towers were overloaded and failed to function.

Emergency Equipment provided:

- Blankets In site office (also in MTC (mobile Treatment Centre) if available
- First Aid kits (in all vehicles)
- Stretcher (available in Site office or MTC

Docum	nent D	Description		Emerge	ncy Pr	eparedness		
Created	Ву:	A. Felczak	Doc. Num	ber	Health, \$	Safety & Envi	ronmen	tal Policy 12.00
Date:	Sep	ot. 23, 2003	Revision:	5	Revised by:	A. Felczak	Date:	Jan. 3, 2013

Emergency procedure as to location of hospitals Medi-centres etc. shall be identified on worker's daily Tailboards (Hazard Assessments) This includes land locations, directions to a hospital, identify the First aiders on crew, directions for the emergency crew and the emergency phone numbers. Crews must address this daily as they may be changing locations daily, Pole/structure locations have the land locates identified on them. These must be identified on all daily tailboards. All workers will attend an annual training program for both Pole top rescue and Bucket rescue, this documentation is to be sent to the corporate office. In case of an emergency the means of transporting the injured worker to a hospital must be addressed at each site. A dedicated vehicle must be identified on each crew. In cases where there is a MTC available then the attending EMT will insure that the worker is transported in an appropriate vehicle.

All records of injuries must be sent to the corporate office for retention for a period of not less than 3 years from date of injury.

12.3 EMERGENCY PREPAREDNESS DRILLS

For projects as designated by the Health, Safety & Environmental Manager, emergency preparedness drills will be conducted quarterly.

All personnel on site should be notified in advance of the drill. An incident should be simulated and observations made of the response. A post drill meeting should be conducted to review the response and address any deficiencies.

12.4 FIRE PROTECTION AND PREVENTION

A fire team will be established on sites when the risk of fire is high. The Project Management or designate and the Project HS&E Advisor shall establish the Fire Team. The Area Fire Team will be organized with specific duties being designated to each member.

The type of project and associated hazards will determine the need for a Team, its size, functions and specific duties.

An individual will be appointed by the Project Superintendent to act as Fire Team leader. Team members should always ensure they are able to escape in the event the fire is out of control. Team duties shall include as a minimum:

- Sounding the alarm or notify the work force using the pre-established emergency summon.
- Notifying the local Fire Department.
- Directing fellow workers to the evacuation area.
- Fighting the fire with available equipment, if safe to do so, until assistance arrives.
- De-energizing power to machines and equipment.
- Closing-off fuel supply to furnaces, ovens, temporary heating facilities, etc.
- Closing doors to contain fire.
- Removing combustible materials from threatened areas.

Document Description			Emergency Preparedness					
Created By:		A. Felczak	Doc. Num	ber	Health, Safety & Environmental Policy 12.00			
Date:	Sept. 23, 2003		Revision:	5	Revised by:	A. Felczak	Date:	Jan. 3, 2013

- Closing-off valves on lines that carry flammable fluids.
- Spreading waterproof covers over open floor drains to minimize water damage.
- Removal of vehicles or equipment from threatened areas.
- Guiding municipal fire fighting personnel to fire.
- Assisting police in crowd control.
- Maintaining access for fire fighting and other emergency vehicles.
- Re-establishing the fire fighting capability after the fire has been extinguished (i.e. spent fire extinguishers recharged or replaced immediately).

Important: No Fire Team member shall place his or her own personal safety at risk. Additional direction for investigation, cleanup and reconnection of services will be provided by the respective fire agency, during their investigation of cause.

The HS&E department on an annual basis will arrange the training of the Area Fire Team

It is essential that organizers of Fire Team impress upon its members that the Team is only the first line of defense against a fire. Caution must be exercised and the Team members are instructed not to place themselves in danger at any time.

12.5 COMMUNICATION WITH WORKERS, PUBLIC AND MEDIA

If and when an emergency occurs, the workers will be advised by sounding the horns on the trucks as well as utilizing the 2 way radios that are in all pieces of equipment. The following company officials will only be permitted to talk to either the general public and/or media:

- o President
- Vice-President of Transmission Projects
- Vice President of Health, Safety and environment

Following an actual incident, the response shall be reviewed to evaluate effectiveness and to correct deficiencies.

EMERGENCY RESPONSE PLANNING

This procedure is to aid in the development of Emergency procedures for work activities in remote areas and to be performed in a safe and efficient manner.

Objective: The following is a list of items which must be addressed and questions that need to be answered and addressed in order that a plan is in place in case of an emergency. It is to be reviewed by everyone so that they are aware of the actions that must be taken to reduce the impact of the emergency itself.

1. Goals:

- To ensure timely response.
- To provide transportation (how?)
- To provide immediate treatment to injured worker.
- To safeguard the general public.
- To prevent additional injury or damage to the rescuers and environment.

2. Communication:

- Radio system or cell phones (check if there is cell coverage) Ensure that the 911 number is available in the working location.
- Note the phone numbers or system to be used in daily tailboards.
- Have workers review emergency numbers in the safety meetings (document)

3. Potential Emergencies:

- Hoisting Equipment upset
- Electrical contact (worker).
- Fall from height.
- Heart attack/stroke
- Motor vehicle accident
- Personal injury (fractures, deep cuts, loss of consciousness).
- Aircraft accident.

The following pages contain the emergency process required to be completed and reviewed at safety meetings. (Please place numbers and contact names in appropriate locations). The Emergency process is to be conspicuously posted throughout the work site and beside site office phones. All supervisors / Forman must carry the ERP with them.

Page 3 - Provide numbers to call and give a copy to the workers.

Page 4 - Provide GPS locates for each area where aircraft can land and/or actual emergency muster point locates (GPS). (Provide this to workers to identify their GPS locates). Insure workers add this information on the tailboard. Ask client for the GPS locates or identify them yourself.

4. Directions required:

- Identify local communities where there is a hospital.
- Write down exact directions to the nearest hospital so that workers know the directions.
- Make sure they write this in their daily tailboards.

EMERGENCY PROCEDURE

- 1. Protect yourself
- 2. Control the scene
- 3. Call the foreman or the EMT's phone number
- 4. Provide first aid (if trained)
- 5. Keep individual warm while waiting for assistance

CALLING FOR ASSISTANCE

Information required

- 1. Your name and call back number.
- 2. Location GPS or other.
- 3. Type of injury(s).
- 4. Number of injured.
- 5. Call Valard's EMT for assistance.
- 6. Advise Stars of Emergency.
- 7. Ask if response will be land or air and the approximate time.
- 8. Keep line free for follow-up calls from Stars.
- 9. Instruct someone to wait at the pre-determined location to meet the emergency crew.

9.1 HEALTH, SAFETY AND ENVIRONMENTAL INSPECTION AND AUDIT POLICY

Valard through its entire employee's will maintain Health, Safety and Environmental Inspection and Audit programs involving formal and informal inspections and Audits.

Informal Health, Safety and Environmental inspections are to be performed on a continuous basis by all supervisory and management staff. All hazards are to be corrected at once.

It is the responsibility of the Area Supervisor's and Manager's to ensure that formal Health, Safety and Environmental Inspections are performed on a bi-weekly basis. A copy of the Health, Safety and Environmental Inspection Report will be forwarded to the Corporate HS&E department for review.

The Health, Safety and Environmental Manager will also conduct inspections on as need basis. PPE will be inspected on quarterly basis by the site Safety Advisor including the worker. This information will be recorded on Form # 9.6 located in section 9 of the HS&E Policy Manual.

All unsafe acts or practices observed during formal Health, Safety and Environmental inspections are to be placed on the next Health, Safety and Environmental meeting agenda.

The Health, Safety and Environmental Manager will or appoint a certified Auditor to conduct formal and informal Audits as a minimum every 12 months as directed in the Health, Safety and Environmental Audit Procedure.

9.2 HEALTH. SAFETY AND ENVIRONMENTAL AUDIT PROCEDURE

PURPOSE

To define the process for conducting periodic audits of the Health, Safety and Environmental Program. The procedure defines the process for scheduling, conducting, and reporting of Health, Safety and Environmental audits.

SCOPE

This procedure applies to all internal Health, Safety and Environmental audits conducted at the site. The scope of Health, Safety and Environmental audits may cover all activities and processes comprising the Health, Safety and Environmental Program or selected Sections or Policies.

Docum	nent [Description	Inspections/ Monitoring						
Created By: A. Felczak		Doc. Num	ber	Health, \$	Health, Safety & Environmental Policy 9.00				
Date: Sep		ot. 23, 2003	Revision:	5	Revised by:	A. Felczak	Date:	Jan. 3, 2013	

GENERAL

Internal Health, Safety and Environmental audits help to ensure the proper Implementation and maintenance of the Health, Safety and Environmental Program by verifying that activities conform to documented procedures and that corrective actions are undertaken and are effective.

All audits are to be conducted by Alberta Construction Safety Association trained Auditors.

When a candidate for Health, Safety and Environmental auditor is assigned to an audit team, the Health, Safety and Environmental Manager will prepare an evaluation of the candidate auditor's performance following the audit.

The Corporate HS&E Manager is responsible for maintaining Health, Safety and Environmental audit records, including a list of trained auditors, audit or training records, audit schedules and protocols, and audit reports.

Health, Safety and Environmental audits are scheduled to ensure that all of the Health, Safety and Environmental Program elements are audited at least once each year.

The Corporate HS&E Manager is responsible for notifying ACSA of any upcoming audits a reasonable time prior to the scheduled audit date. Site areas and functions subject to the Health, Safety and Environmental audit will also be notified a reasonable time prior to the audit.

The Corporate HS&E Manager is responsible for ensuring that the audit, audit report and any feedback to the site areas or functions covered by the audit is completed per the audit schedule.

The Site Safety Advisor/Area Supervisor, in conjunction with the Corporate HS&E Manager, is responsible for ensuring that Audit Action Items are prepared for audit findings, as appropriate.

PROCEDURE

- Audit Team Selection One or more auditors comprise an audit team. When
 the team consists of more than one auditor, a Lead Auditor will be designated.
 The Lead Auditor is responsible for audit team orientation, coordinating the audit
 process, and coordinating the preparation of the audit report.
- 2. Audit Team Orientation The Lead Auditor will assure that the team is adequately prepared to initiate the audit. Pertinent policies, procedures, standards, regulatory requirements and prior audit reports are made available for review by the audit team. Each auditor will have appropriate audit training from the ACSA.
- **3. Written Audit Plan** The Lead Auditor is responsible for ensuring the preparation of a written plan for the audit.
- **4. Prior Notification** The site areas to be audited are to be notified a reasonable time prior to the audit.
- 5. Conducting the Audit
 - a. A pre-audit conference is held with appropriate personnel to review the scope, plan and schedule for the audit.

Docum	nent [Description				Insped	ctions/	Monitoring
Created	Ву:	A. Felczak	Doc. Number Health, Safety & Environmental Policy					tal Policy 9.00
Date:	te: Sept. 23, 2003 Revision: 5 R		Revised by:	A. Felczak	Date:	Jan. 3, 2013		

- b. Auditors are at liberty to modify the audit scope and plan if conditions warrant.
- c. Objective evidence is examined to verity conformance to Health, Safety and Environmental Program requirements, including site procedures. All audit findings must be documented.
- d. Specific attention is given to corrective actions for audit findings from previous audits.
- e. A post-audit conference is held to present audit findings, clarify any misunderstandings, and summarize the audit results.

6. Reporting Audit Results

- a. The Team Leader prepares the audit report, which summarizes the audit scope, identifies the audit team, describes sources of evidence used, and summarizes the audit results.
- Findings requiring corrective action are entered into the corrective action database.

Audit Report Distribution

- a. The Corporate HS&E Manager is responsible for communicating the audit results to responsible site management. The Corporate HS&E Manager will make copies of the audit report available.
- b. The Corporate HS&E Manager is responsible for ensuring availability of audit reports for purposes of the annual Management review.

8. Audit Follow-up

- a. Management in the affected site is responsible for any follow-up actions needed as a result of the audit.
- b. The Corporate HS&E Manager Manager is responsible for tracking the completion and effectiveness of corrective actions.

9. Record Keeping

Audit reports are retained for at least two years from the date of audit completion. The Corporate HS&E Manager is responsible for maintaining such records.

9.3 HEALTH, SAFETY AND ENVIRONMENTAL INSPECTIONS

Informal site inspections are to be performed on a continuous basis by management and supervisors. Formal site inspections are to be performed a minimum bi-weekly.

The inspection team is to be made up of at least one supervisor and at least one worker (chosen on a rotational basis).

The inspection team will tour:

The entire site

Or:

• On larger projects, a designated portion of the site. If only a portion is completed, additional inspections will be required to ensure the entire project is inspected once bi-weekly.

Following the inspection, form 9.4a must be filled out for site inspections and 9.4b for office and shop inspections

- All deficiencies found must be noted on the checklist (if applicable) and on the summary.
- Any item on the summary must be assigned to an individual for corrective action. The corrective action must be carried out by the due date and signed off.
- Completed inspection forms are to be submitted to Corporate Safety in a timely manner.

11.1 INVESTIGATION POLICY

It is the Policy of Valard Construction to have all incidents reported utilizing the Notification/Investigation Report Form 11.3.1.

If the incident requires investigation it must be classified either Level I, Level II or Level III and it is to be thoroughly investigated.

Vehicle accidents must be reported on form # 11.3.1 (Incident Notification Form) and if available the Police report must also be attached. In case of a serious or major environmental spill the Environmental Incident Report Form 11.3.4 must be completed. The purpose of such investigations is to determine the basic root causes of the incident so that appropriate action can be taken to prevent its recurrence.

11.2 INVESTIGATION PROCEDURE

All incidents that result in First Aids, Lost Time Injury, Medical Aids, Modified Work, or Near-Misses that could have resulted in serious injury or property damage are to be thoroughly investigated. All investigators will be trained in investigative techniques. The Area Supervisor in conjunction with the Safety Advisor shall lead the investigation unless otherwise indicated by the VP of Health and Safety. The investigator shall take statements from witnesses or others who may have relevant information and thoroughly review the site and all pertinent evidence. All incidents must identify action items that will reduce the likelihood of re-occurrence. The lead investigator shall forward the Investigation Report to the Corporate HS&E Manager within 48 hours of the incident. A copy of the report shall be forwarded to the VP of Health, Safety & Environment within 48 hours. The VP of Health, Safety & Environment shall review all corrective action notices implemented.

Steps:

- 1. Secure area of incident. Rope off area and keep all personnel away.
- 2. Inform client, Valard's OH&S department and the appropriate Provincial government OH&S Office or the equivalent in other jurisdictions/provinces such as in Ontario (MOL), Yukon, NWT, British Columbia (WCB).
- 3. Have all witnesses complete a detailed statement as to what they either witnessed or heard.

All Investigation Reports will be reviewed at the next Health, Safety & Environmental meeting.

All Investigation Reports and new appropriate measures will be reviewed at regularly scheduled staff meetings.

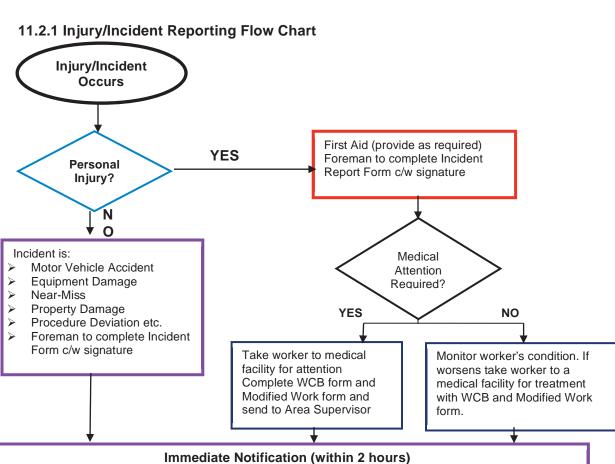

Workers will be instructed to report injuries (including minor scratches, muscle strain and particles in the eye, etc.) immediately to their foreman or supervisor. All incidents regardless of their severity shall be initially reported utilizing Incident Notification/Investigation Report Form 11.3.1. Employees should be instructed that if they must leave the job for illness or injury (either work related or non-work related) they must notify their supervisor.

Any employee seeking the care of a physician following an occupational injury or illness will be given a Modified Work Package for the physician to fill out (see Section 15 Modified Work), and will be instructed to report any anticipated loss of work time to

Docum	nent [Description	Incident Investigation Policy							
Created By: A. Felczak			Doc. Num	ber	Health, \$	Health, Safety & Environmental Policy11.00

his/her supervisor as soon as possible. When modified work is required, it will be arranged for as per Section 15 of this manual using the information provided by the Physician. If the Employee visits a medical clinic they and their supervisor will fill out the appropriate Workers' Compensation forms as prescribed by legislation. Immediately notify the Director of Health and Safety, and forward any all required WCB, (WSIB in Ontario) forms within 24 hours of the incident.

- Foreman to notify Area Supervisor
- Area Supervisor notifies Area Manager who will contact (depending on severity) the respective VP, Safety Contact, etc.
- All WCB and Valard Incident forms to be sent to Area Manager for further distribution

Usually there is no further action. However, you must contact Area Supervisor if the following occurs:

Non-medical attention injury now requires medical attention. Example, worker reports sore back, no medical attention initially required. Two weeks later back is still sore and wants to see a doctor. WCB report must be sent to area Supervisor. This includes seeing a specialist.

Docum	ent D	Description				Incident In	vestig	ation Policy

Date: Sept. 23, 2003		Revision:	5	Revised by:	A. Felczak	Date:	Jan.3, 2013	

11.2.2 Incident Classification and Investigation Process

Incidents are classified to differentiate from those that do not require a full investigation process from those that do.

For all incidents regardless of its severity must be reported on form # 11.3.1

For environmental Incidents use form # 11.3.2

LEVEL I: (Requires an incident report)

- First Aid
- Medical Aid (no high potential injury i.e. small cut to finger)
- Non-injury vehicle incident less than \$1000.00 damage
- Occupational Illness
- Loss of Property
- Damage to property or equipment less than \$1,000.00
- Procedure deviation with no damage

LEVEL II: Requires an investigation

- Lost Time or Medical Aid with high potential to cause permanent impairment
- Environmental noticeable but repairable short-term damage
- Vehicle incident with greater than \$1000.00 damage
- Vehicle incident with 3rd party injury
- Contact with either underground/overhead lines
- Procedure deviation that caused damage or an unscheduled outage
- Criminal Acts or threats to employees
- Damage to property or equipment greater than \$1000.00 and less than \$500,000.00

LEVEL III: Requires a full investigation (Tap Root Investigation Process)

- Death or permanent disability
- Environmental damage that may cause long term harm
- Damage that could exceed \$500,000.00
- Bomb threat or an attack against person resulting in serious injury or death, etc.

NOTE: For any incident in Level II and III the site must be secured and all workers involved must participate in the investigation.

7.1 ENVIRONMENTAL EMERGENCY RESPONSE PLAN

Preventing the Release of Contaminants

The prevention of the release of contaminants is achieved through the following means:

- 1. Compliance with all government legislation.
- 2. Safety and Environmental Hazard Awareness Training.
- 3. Preventative maintenance.
- 4. Emergency response training.
- 5. ECO to be prepared prior to work commencing.

The release of a contaminant may happen as a result of equipment malfunctions and human error. In the event of a release of a contaminant, Valard Construction will respond by:

- 1. Ensuring the safety and health of its employees, subcontractors and the public.
- 2. Mobilizing the necessary crews and equipment to contain and clean up the contaminant to protect the environment.
- 3. Report the release of the contaminant to the appropriate government agencies immediately.
- 4. Complete Environmental Incident Report Form # 11.3.4 (See Section 11)
- 5. List of numbers for all provinces are listed in 7.3 of this section

Contaminant Release Types

Contaminant releases can be categorized as Major, Serious and Minor.

1. Major incidents:

- a) An emergency presents an immediate threat to life, or an immediate hazard to property and/or to the environment.
- b) An uncontrolled release, vehicle collision, line, valve or tank rupture with an extensive release of hazardous materials occurs e.g. uncontrolled leakage from the rupture of a gasoline storage tank.
- c) Requires the involvement of an Emergency Team trained in spill contaminant and clean up.
- d) May extend beyond the site property, including materials released in or adjacent to watercourses.
- e) Are immediately reportable under legislation.

2. Serious incidents:

- a) Present a safety, property and/or an environmental hazard.
- b) Are controllable, but involve a high rate of release with the possibility of affecting a wide area. This includes small leaks of very hazardous materials, and may include materials released in or adjacent to water courses.
- c) Requires assistance from personnel outside of the company. i.e. environmental personnel.

Docum	nent [Description	Environmental Polic					ental Policy
Created By: A. Felczak D			Doc. Num	ber	Health, \$	Safety & Envi	ronmen	tal Policy 7.00
Date: Sept. 23, 20		ot. 23, 2003	Revision:	5	Revised by:	A. Felczak	Date:	Jan. 3, 2012

d) May have a potential to extend beyond the company site/property.

3. Minor incidents:

- a) Present minimal potential to safety, property damage or environmental hazard.
- b) Are localized and controllable.
- c) Can be contained and cleaned up immediately by personnel first on the scene or with minor assistance.

Approaching a Contaminant Release

Some basic safety tips when approaching a hazardous incident.

- 1. Try to identify the product from a distance and determine the hazards.
- 2. Do not approach from downwind.
- 3. Avoid inhalation of gases, fumes and smoke.
- 4. Remember that relatively light gases, when cold, may be initially heavier than air.
- 5. Do not assume that gases and vapours are harmless because they lack odour or the odour is not offensive.

Initial Contaminant Assessment

- 1. Determine the severity of the release (Major, Serious or Minor) using contaminant release flow chart (see next page).
- 2. Determine the type (material) of release and the level of severity/potential impact.
- 3. Determine the proper protective equipment from the Material Safety Data Sheet (MSDS).

7.2 Right of Way Construction Guidelines

Construction traffic shall be restricted to the right-of-way and approved extra workspace only. If possible, traffic shall be confined to a single trail along the right-of-way. Construction vehicles and equipment shall be operated at speeds safe for existing roads and traffic conditions.

Valard shall ensure that access through sensitive areas (i.e., critical wildlife habitat, erodible soils, recreational sites, historical sites, etc.) is pre-planned in advance of construction initiation. The number of vehicles and trips in these areas shall be minimized to reduce or eliminate potential environmental impacts. Material and equipment purchased must be evaluated on its impact on the environment. This impact must be reviewed prior to any purchases being processed. This includes such items as light bulbs, water use equipment, fuel burning devices and any work activities that may impact the environment and green house gases.

All surface disturbances shall be kept to a minimum. Every effort shall be made to preserve topsoil, and prevent topsoil/subsoil mixing and compaction, loss of organic matter, and rutting. During the onset of a winter thaw, wet weather, and other saturated soil conditions, the Field Representative shall have the authority to suspend equipment travel on the right-of-way to reduce or eliminate impacts. Equipment travel shall resume only after soils are sufficiently dry or frozen.

Docum	nent D	Description	Environmental Policy					ental Policy
Created By: A. Felczak			Doc. Num	ber	Health, S	Safety & Envi	ronmen	tal Policy 7.00
Date:	Sep	ot. 23, 2003	Revision:	5	Revised by:	A. Felczak	Date:	Jan. 3, 2012

Vehicle travel in areas susceptible to poor ground frost conditions or general unstable soil shall be closely monitored. Re-routes may be necessary to avoid low frost areas or employ alternate construction procedures such as swamp mats, log corduroy, rip-rap, or filter fabric. Approval of all re-routes shall be obtained from Valard Construction. All seasonal road bans shall be respected when and where applicable. Vehicles are not to be left idling unless required for a work activity. Workers will be transported to worksites in vehicles that accommodate more than 4 workers to minimize equipment used and lessen the impact on green house gases. This will also require that equipment purchased is evaluated for fuel efficiency.

When material is ordered for work on site, every effort must be made to order only the material required to perform the task and to minimize the amount of waste that is to be removed from site. Examples would be ordering the exact quantity of concrete for footing; only order the exact amount required and not extra "just in case" This prevents any addition trucking that may be required to remove any waste from the worksite.

7.3 REPORTING OF SPILLS

The following numbers are for reporting Environmental spills and are only accessible in the applicable province.

Alberta: 1-800-222-6514 **British Columbia** 1-800-663-3456 Saskatchewan 1-800-667-7525 Manitoba 1-204-994-4888 Ontario 1-800-268-6060 Yukon 1-867-667-7244 NWT/Nunavut 1-867-920-8130 Newfoundland 1-800-563-9089

IN ALBERTA REPORTABLE RELEASES INCLUDE: (IN ALBERTA)

- All oils > 5 Litres
- Gas, diesel & glycol > 50 litres
- PCBs > 50 ppm
- SF_6 or $CF_4 > 0.5$ kg
- Refrigerant > 10kg (ozone depleting substance)
- Releases entering or near entering waterways
- Releases that MAY cause adverse effect

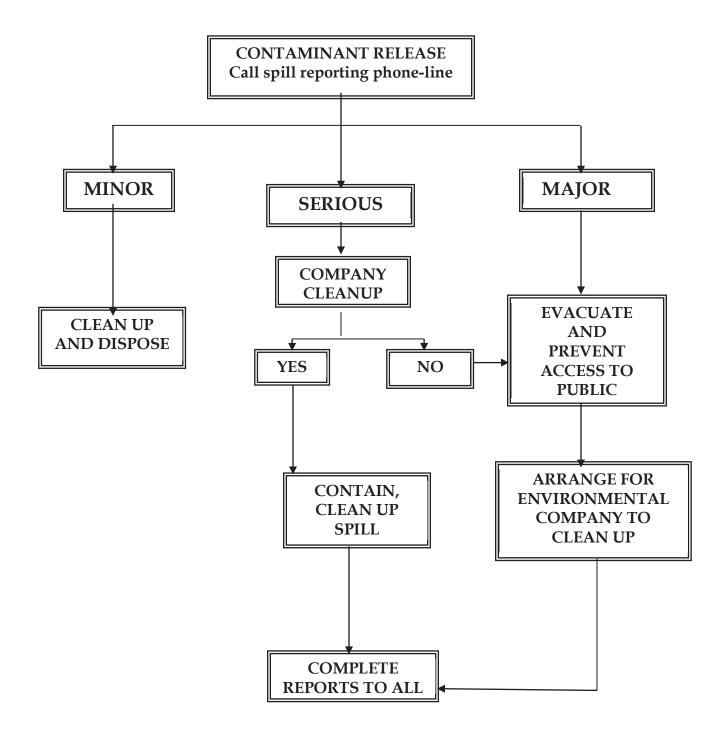

WHEN REPORTING YOU WILL BE ASKED TO PROVIDE:

- The location and time of the release
- A description of the circumstances leading to the release
- The type and quantity of substance released
- The details of any action proposed or taken at the release site
- · A description of the immediate surrounding area

Evacuate all persons to a safe distance!!!

Definitions

The following definitions shall be used in the interpretation of this manual and all referenced subdocuments:

- **Client** Any entity with which Valard Construction Ltd. holds a contract for the provision of products and/or services.
- Constructed Works The structures, devices and/or installations specified for construction in the scope of a Contract.
- **Contract** Governing agreement between the Client and Valard Construction Ltd. for the provision of services associated with a Project.
- **Directive** Instruction to responsible parties.
- **Distribution Register** Register maintained by the Quality Program Documents Administrator listing all recipients of controlled copies of the Quality Manual.
- Document See 'Quality Program Document'.
- **Engineer** To be interpreted as per the definition provided by the Engineering Professional Association in the jurisdiction where a product or service is provided, completed, purchased, negotiated or constructed.
- **Engineering Services** Any services governed by an Engineering Professional Association in the jurisdiction where a product or service is provided, completed, purchased, negotiated or constructed.
- Engineering Consultant Individual or entity subcontracted to provide Engineering Services to Valard Construction Ltd.
- Form Quality Program Document provided for the purpose of gathering data.
- Hold Point Juncture in a work Process at which work must not be continued until the specified inspections and/or signoffs are completed.
- **ITP** Inspection and Test Plan
- Operational Controls Documentation and devices employed in the assurance of Quality at the construction stage of a Project.
- Originator Individual assigned the responsibility of establishing a Quality Program Document.
- Owner Individual assigned the responsibility of revising a Quality Program Document.
- **Procedure** Quality Program Document consisting of a verbal narrative of the manner in which a task is to be completed.
- **Program** See 'Quality Program'.

0 Introduction

0.1 Goals of the Project Quality Plan

The stated goal of this Project Quality Plan is to establish a framework for the control and assurance of the Quality of (a) work completed by the Subcontractor, (b) materials supplied by Valard Construction, and (c) materials supplied by the client. This Preliminary Project Quality Plan is preliminary and has been composed for the purpose of proposing an implementation strategy for the Subcontractor's responsibilities on The 240 kV Transmission Line; this strategy has also been composed for the purpose of identifying the subcontractor's ability to conform to clients's Inspection and Testing Plan. The client is invited to review this PQP for the purpose of identifying any discrepancies or inconsistencies, following which the PQP will be revised to better reflect the requirements of the Contract.

0.2 Form of Project Quality Plan

This document is divided into four primary sections:

- Management & Administration: In addition to providing an overview of the proposed project management structure, this section will summarize the role assignments and assumed responsibilities associated with each role.
- 2) Records: This section will overview the manner in which records will be gathered, preserved, and distributed over the course of project completion.
- 3) Materials: This section will summarize all materials to be supplied by the by the Prime Contractor and/or the Subcontractor under the terms of the Contract; it will also specify the proposed methods of Quality Control associated with each material category.
- 4) General Work Activities: This section will examine Quality Control over broad topics affecting several or all work activities (i.e. supervision, certifications, etc.)
- 5) Specific Work Activities: This section will specifically address the work activities for The 240 kV Transmission Line

Page 8 of 80

1 Management & Administration

1.1 Project Management Structure

The general form of the Project management structure (as it pertains to Quality) is illustrated below:

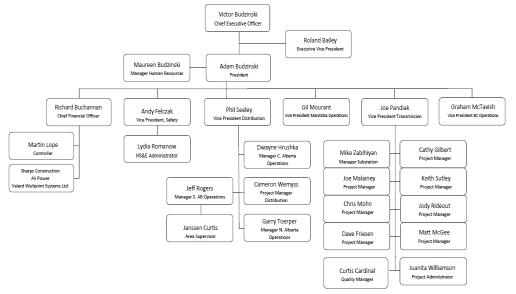

Fig. 01 Project Management Structure Diagram

The primary observable features of this structure are as follows:

- The Quality Manager answers directly to the President.
- Quality Coordinators report to the Quality Manager.
- Trade Supervisors and Project Coordinators are monitored by Quality Coordinators on behalf of the Quality Manager.

1.2 Role Assignments

The following chart will be completed to summarize some of the key personnel to be employed in the completion of the Project. Only personnel having responsibilities specified in the PQP are to be listed. The names of those personnel having key managerial roles are presently listed for the purpose of proposal.

C <u>IMFI</u>	P Exhibit P-	01886		Page 18	32
Valard A QUANTA SERVICES COMPANY				Quality Program	
Document Number: VCLP-02-7000-0-00	Revision N 1	umber:	Last Reviewe	ed:	
Project Quality Plan:		Originato	or:	Approved:	

The role assignments chart will continue to be updated as personnel are added to and/or removed from the Project.

Role	Name	E-mail	Phone	Initial	QM Initial
Project					
Manager					
Quality					
Manager					
Lead Quality					
Coordinator					
Quality					
Coordinator					
	(Several				
Supervisor	Assigned)				

Qualifications 1.3

All personnel employed in the administration of the Project Quality Plan shall possess the necessary skills and be qualified for the completion of their assigned responsibilities.

Responsibilities 1.4

It should be observed that the following responsibility summaries are not exhaustive, and describe the responsibilities associated with the roles in question only as they relate to the Project Quality Plan.

1.4.1 **Responsibilities of the President**

The responsibilities of the President as they relate to Quality are as described under heading 1.2.1 of the Quality Manual.

1.4.2 Responsibilities of the Project Manager

The responsibilities of the Project Manager are as follows:

- To ensure that supervisors and trade foremen are of adequate training and/or experience to complete the production-related tasks assigned to them
- To enforce the authority of the Quality Manager and appointed project Quality Coordinators
- To address the concerns of the client with respect to Quality issues
- To ensure that supervisors and trade foremen are completing their responsibilities in accordance with the Project Quality Plan

1.4.3 Responsibilities of the Quality Manager

The responsibilities of the Quality Manager as they relate to Quality are as described under heading 1.2.2 of the Quality Manual.

1.4.4 Responsibilities – Project Coordinators

The responsibilities of Project Coordinators with regard to a given Project Quality Plan are as follows:

- Project Coordinators shall accept the delegation of any of the Project Manager's responsibilities at the written request of the Project Manager.
- Project Coordinators shall work with subcontractor personnel at the planning stage to ensure they are informed of any and all Quality requirements of the Project as they relate to the subcontractor's work.
- Project Coordinators shall enforce the authority of the Quality Coordinator with respect to the administration of the Project Quality Plan

1.4.5 Responsibilities – Quality Coordinators

The responsibilities of Quality Coordinators are as follows:

- The Quality Coordinator shall prepare the Project Quality Plan in accordance with the Quality Manual.
- The Quality Coordinator shall interface with the Project Manager to collect any required information for the completion of the Quality Plan.
- The Quality Coordinator shall interface with trade supervisors and foremen to collect any required information for the completion of the Quality Plan.
- The Quality Coordinator shall interface with subcontractor trade supervisors and foremen to collect any required information for the completion of the Quality Plan.
- The Quality Coordinator shall be responsible for review of the Quality Plan to ensure that all items listed in the 'Controls' columns of the Quality Plan components listed under heading 3.1 are further referenced in the plan narrative. In the event that these items are not referenced in the narrative, the Quality Coordinator shall request a review of the Quality Manual and Project Quality Plan template to satisfy the requirements of the Project.
- The Quality Coordinator shall submit the Project Quality Plan to the Client in accordance with the requirements of the Contract, or in accordance with any further agreements made with the Client.
- The Quality Coordinator shall collect all required documentation associated with the purchase of materials and products for the Project from employees charged with receiving such materials and products; this work is completed for inclusion in the Quality Record.
- The Quality Coordinator shall collect inspection forms and reports generated at the time of installation from foremen and trades people for the purpose of inclusion in the completed Quality Record.
- The Quality Coordinator shall compile all relevant Quality documentation for inclusion in the completed Quality Record.
- At project kick-off, the Quality Coordinator shall be responsible for explaining the Quality-related responsibilities of all trade-level employees and subcontractors (Supervisors, Foremen, Trades people, and Labourers) – as well as specifying his/her own role – to the project Foremen and Supervisors.

Page 12 of 80

CIMFF	PExhibit P-	01886	ı	Page 1	85
Valard A QUANTA SERVICES COMPANY				Quality Program	
Document Number: VCLP-02-7000-0-00	Revision N	umber:	Last Reviewe	ed:	
Project Quality Plan:		Originato	nr.	Approved:	

The Quality Coordinator shall perform periodic audits for the purpose of confirming that all personnel are completing their work in accordance with the PQP.

1.4.6 Responsibilities – Engineering Manager

(Omitted)

1.4.7 Responsibilities – Design Lead

(Omitted)

1.4.8 Responsibilities – Design Engineers

(Omitted)

1.4.9 Responsibilities – Supervisors

The responsibilities assigned to Supervisors follows are as (responsibilities are common for both employed and subcontract supervisors):

- The Supervisor shall ensure that all trade-level employees are in possession of sufficient training and experience to complete their assigned tasks.
- The Supervisor shall enforce the authority of the Quality Coordinator as it relates to the direction of the completion and collection of Quality-related documents.
- The Supervisor shall ensure that trades people are supplied with those resources required to complete their work in accordance with the design requirements of the project, as well those required to observe and collect data pertaining to the Quality of the works constructed.

Page 13 of 80

1.4.10 Responsibilities – Foremen

The responsibilities assigned to foremen are as follows:

- The Foreman shall supervise the completion of work to ensure that it is completed in accordance with the requirements of the Project design drawings.
- The Foreman shall ensure that works constructed are built only in observance of drawings marked 'Issued for Construction.'
- The Foreman shall ensure that records of works installed are completed by those individuals completing the work, and that such records are completed at the time of installation or assembly.
- Where required by Installation Records, the Foreman shall perform a secondary inspection of works completed and sign for such inspection.
- The Foreman shall direct trades people and labourers working under their supervision as to their Quality-related responsibilities in accordance with this document.

1.4.11 Responsibilities – Trades people (Not specified in management structure)

Trades people shall complete all Quality Records specified by the Project Quality Plan and associated with their work at the time of installation, assembly, or testing, as the case in particular requires.

1.4.12 Responsibilities - Labourers (Not specified in management structure)

Labourers shall complete all Quality Records specified by the Project Quality Plan and associated with their work at the time of installation, assembly, or testing, as the case in particular requires.

IMED Evelet D 04006

2 Quality Record

'Quality Record' refers to the complete body of Quality-related documentation collected over the course of project completion. This section provides a narrative of the manner in which the constituent documents will be collected, preserved and distributed.

2.1 Valard Construction's Inspection and Test Plan

Valard Construction will generate a complete Inspection and Test Plan (ITP). The Quality Record consists essentially of the body of documentation described in the ITP.

Regarding all forms associated with the Quality Record and/or the ITP, Valard proposes, the following measures should be taken to expedite the collection, and distribution of Quality related documentation:

- All forms should be revised to ensure that they can be presented in their entirety on a single page (can be accomplished through the use of smaller fonts and/or legal-sized documents).
- All forms should be printed and made available in triplicate carbon paper form; alternately, Valard Construction will make electronic copies of the Forms specified in the ITP available for the purpose of its advance preparation of site-specific Quality Forms.

All ITP's shall be submitted for acceptance by the client and if required by the client, prior to any work commencing. ITP's shall be submitted at least 7 (seven) days prior to the proposed work commencement date, to allow for review and input from all parties.

2.2 Reporting Summary

Valard will generate a Reporting Summary consisting of a complete list of all completed and/or partially completed forms to be submitted to the Prime Contractor over the course of the Project. These forms shall be available, at all times, for review by the Prime Contractor's Quality assurance staff. Explicitly, this Summary shall consist of the following:

- A summary of all Quality Related Forms to be collected in relation to material receiving and inspection;
- A summary of all Quality Related Forms to be collected for each individual structure (inclusive of foundation) to be installed in awarded sections

In addition, the summary of structure-related Quality forms will also account for and reference secondary Quality forms such as concrete delivery tickets, third party concrete strength testing reports, laboratory sieve test results, and any other documentation.

 A summary of all Quality Forms relating to conductor and hardware installation.

2.2.1 Subcontractor Generated Quality Forms

In all cases, where the PQP specifies a Form, the Forms shall be generated in accordance with the requirements of the PQP. Each type of Form will be assigned a document number, in addition to a system of serial numbers whereby the Forms can be traced.

Subcontractor Quality Forms may be generated for the internal purposes of the Subcontractor with respect to Quality or may be generated for the purpose of satisfying elements of the specification that relate to Quality.

Page 16 of 80

2.2.2 The Quality Record

'Quality Record' describes the complete set of Quality-related documentation that will be:

- 1. Assembled by the Subcontractor for the purpose of satisfying its internal requirements with respect to Quality.
- 2. Submitted to the Prime Contractor for the purpose of documenting the Quality of works constructed in association with the Contract.

The Reporting Summary represents a table of contents for the Quality Record. The expectation is that at Project completion, all Forms outlined in the Reporting Summary will be present in the Quality Record.

In addition to those elements specified in the reporting summary, the Quality Record will include documentation of other elements of the Quality Program (i.e. Nonconformity Reports, Audit Documentation Forms, etc.); these elements are referenced throughout the PQP, and will be compiled at the time of generation of the Reporting Summary.

2.2.3 Completeness of Record

The completed Reporting Summary shall form a benchmark for the performance of the Subcontractor with respect to Quality over the course of the Project. A complete Quality Record corresponding exactly to the Reporting Summary (along with any amendments thereto made over the course of the Project) shall be deemed to accurately represent the Quality of all works constructed by the Subcontractor.

2.3 Procedures for the Completion of Quality Documentation

This section shall establish procedures for the completion of each type of Quality Form listed in Valard's ITP, in addition to Quality Documentation deemed to be necessary by the Subcontractor and completed in addition to the requirements of the ITP. These procedures consist of a crossfunctional procedural flowchart for each Quality form, along with a short narrative. The Procedures are divided into the same groups of forms described under Section 2.2 of this document.

It should be noted that for all forms - where the form has been completed and indicated for inclusion in the Quality Record - it is the

CIMF	P Exhibit P-	01886		Page 1	90

Project Quality Plan:		Originato	or:	Approved:	İ

VIMED Exhibit D 01006

Subcontractor's preference that it first be submitted Subcontractor's Project office for the purpose of copying and filing prior to submission to the Prime Contractor.

2.3.1 Forms Pertaining to Material Receiving and Inspection

In general the following will apply for Quality forms pertaining to material receiving and inspection:

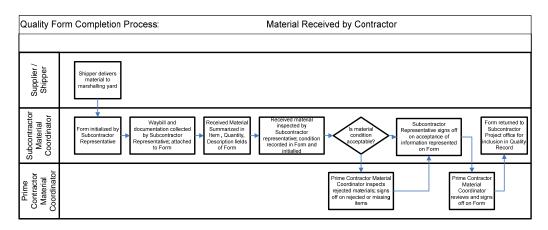

- 1. Quality forms pertaining to borrow pits and earthworks materials will be initialized by the Project Manager and/or Project Coordinators at Project startup or as required over the course of the project. Borrow pit documentation will be preserved in the Project office and associated with the geographic location of the pit for the purpose of efficient access to earthworks materials.
- 2. Quality Forms pertaining to purchased materials and products will be initialized by the Subcontractor Materials Coordinator at the time of receiving.
- 3. In all places where a Form indicates that a Subcontractor representative will notify the Prime Contractor of its intention to begin work on the right-of-way or at a structure location, it is implicit that such notice will be accomplished via the Subcontractor's schedule updates and daily verbal amendments thereto. In general, it is expected that the Prime Contractor's representatives will be working closely with the Subcontractor's Supervisors and construction Foremen, and as such will be familiar with its construction schedule. With the exception of direct requirements thereof found in the Contract, written notice specifying the completion or inspection of work at a particular location will not be provided. Submission of schedule updates on a regular basis will be deemed to be acceptable notice of the imminence of construction activities at any given location.

Page 18 of 80

Valard A QUANTA SERVICES COMPANY				Quality Program		
Document Number: VCLP-02-7000-0-00	Revision No	umber:	Last Reviewe	ed:		
Project Quality Plan:		Originato	or:	Approved:		

2.3.1.1 Materials Received by Contractor

The following diagram illustrates the flow of information related to the completion of Materials Received by Contractor form:

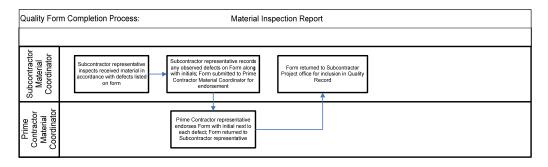

Process notes:

- Documentation collected by Sub-contractor's representative will include: mill test reports and bills of lading.
- In the event that the received condition of material is unacceptable, details of the reason for rejection of the material will be recorded in the available space on the form.
- Where the material or quantity thereof is inconsistent with the waybill, this condition will trigger the generation of a Vendor Shortage List.
- Process notes shall include welding examination and inspections for all welding completed by any supplier.
- All materials received from any supplier must be accompanied by welding reports and welding inspections substantiated quality of materials and workmanship.

2.3.1.2 Materials Inspection Report

The following diagram illustrates the flow of information related to the completion of Materials Inspection form:

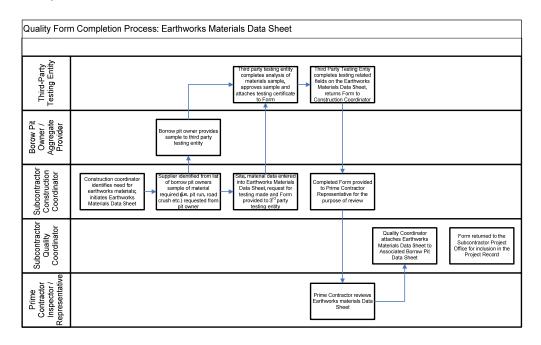

Process notes:

- Documentation collected by Subcontractor representative will include all defects, not just limited to defects specified on the Form.
- Sign established at pit will feature the following information:
 - Subcontractor name and logo
 - Contract tag and number
 - Borrow Pit Data Sheet document number
- Ultimately, as various materials are identified and approved at the borrow pit site, the associated Earthworks Materials Data Sheets will be attached to the Borrow Pit Data Sheet and made available in the Project Office.

2.3.1.3 Earthworks Material Data Sheet

The following diagram illustrates the flow of information related to the completion of the Earthworks Material Data Sheet:

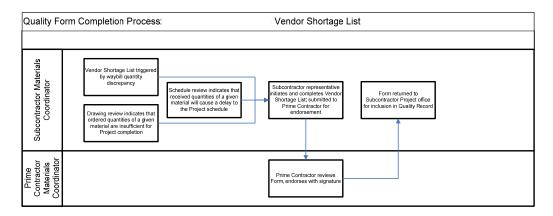

Process notes:

 As specified above, Earthworks Material Data Sheets will be attached to their respective Borrow Pit Data sheet, ultimately creating a record both of a site, as well as the properties of materials available at that site.

2.3.1.4 Vendor Shortage List

The following diagram illustrates the flow of information related to the completion of Vendor Shortage form:

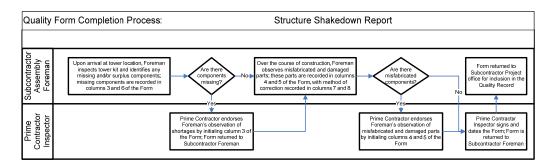

Process notes:

 Process assumes availability of Prime Contractor Representative for inspection of material and acceptance of Vendor Shortage Lists.

2.3.1.5 Structure Shakedown Report

The following diagram illustrates the flow of information related to the completion of Structure Shakedown form:

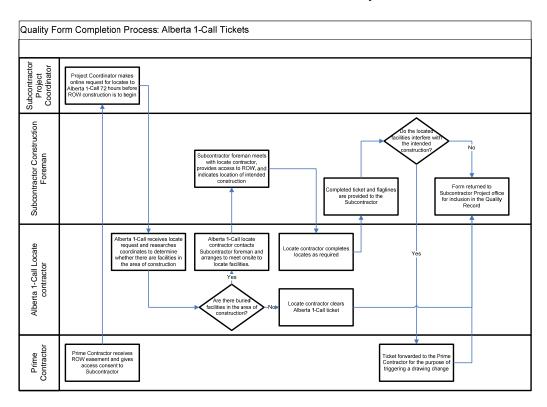

Process notes:

- Dependent upon the nature of the tower kit packaging, it may be beneficial to complete the initial survey for missing parts at the marshalling yard prior to delivery of the kit to the tower site.
- Observations of mis-fabrications are by necessity carried out over the course of construction; this is a result of the fact that many defects will be difficult or impossible to observe without actually attempting to assemble the tower.

2.3.2 Forms Pertaining to Structure Erection (Foundations)

2.3.2.1 Alberta 1-Call Tickets

Although the 1-Call Ticket is not a required element of the Prime Contractor's ITP, it will be included with the Quality Record.

Process notes:

 In the event that it has been determined that located facilities interfere with the installation of a tower foundation, construction

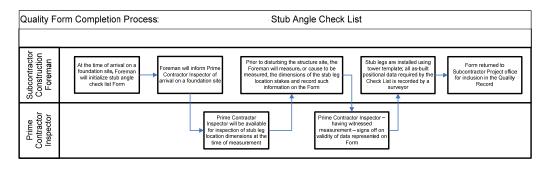

CIMF	P Exhibit P-		Page 196

Document Number: VCLP-02-7000-0-00	Revision N 1	umber:	Last Reviewe	ed:	
Project Quality Plan:		Originato	r:	Approved:	

at the tower site will be suspended pending a drawing change from the Prime Contractor.

Page 24 of 80

2.3.2.2 Stub Angle Checklist

The following diagram illustrates the flow of information related to the completion of Stub Angle Checklist form:

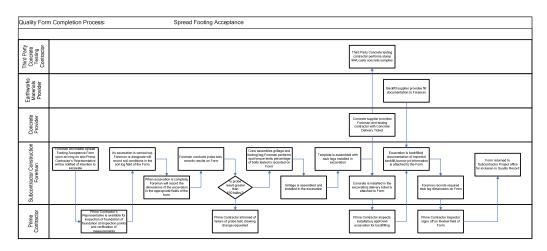

Process notes:

(None)

2.3.2.3 Spread Footing Acceptance

The following diagram illustrates the flow of information related to the completion of Spread Footing Acceptance form:

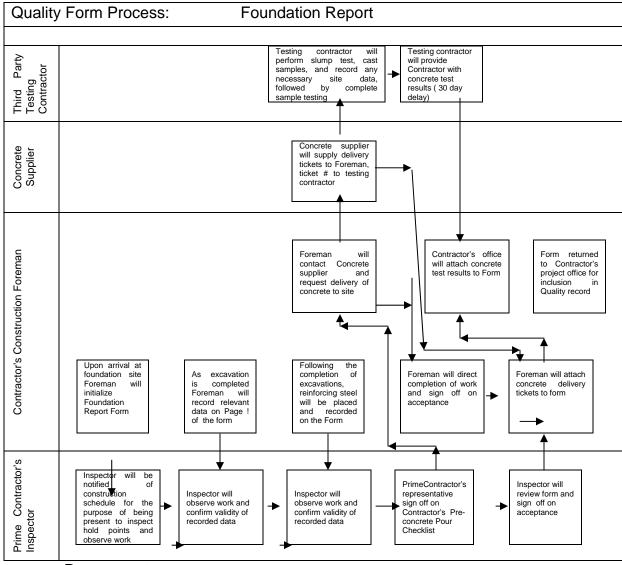

Process notes:

• (None)

CIMFP Exhibit P-01886				Page 19	98
Valard A QUANTA SERVICES COMPANY				Quality Program	
Document Number: VCLP-02-7000-0-00	Revision No	umber:	Last Reviewe	ed:	
Project Quality Plan:		Originato	r:	Approved:	

2.3.2.4 Foundation Report for Structure

The following diagram illustrates the flow of information related to the completion of Foundation Report for Structure form:

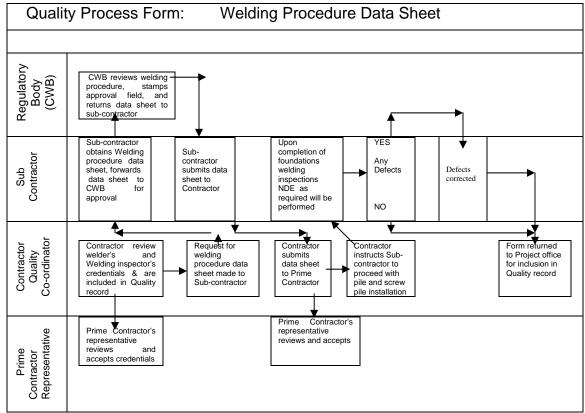

Process notes:

None

2.3.2.5 Welding Procedure Data Sheet

Page 26 of 80

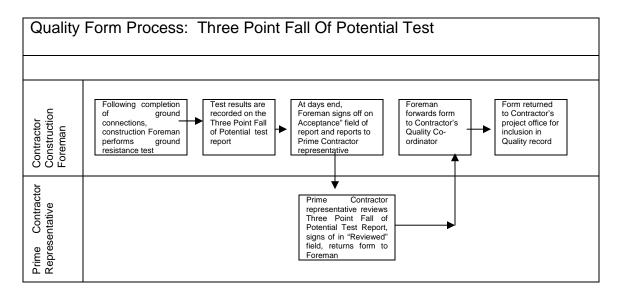

The following diagram illustrates the flow of information related to the completion of the Welding Procedure Data Sheet:

Process notes:

 Following completion of the Welding Procedure Data Sheet, it will be made readily available in the Project office

2.3.2.6 Three Point Fall of Potential Test Report

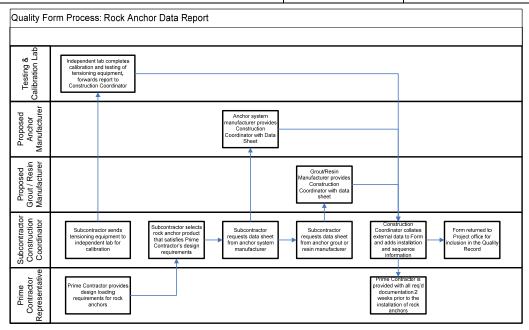

Process notes:

- Forms are to be completed and submitted on a daily basis.
- It is assumed that the Prime Contractor Representative will be available to provide supervision or spot-checks of testing process throughout the day for the purpose of confirming the validity of test results prior to signing the 'Reviewed field of the Form.

2.3.2.7 Rock Anchor Data Report

The following diagram illustrates the flow of information related to the completion of the Rock Anchor Data Report:

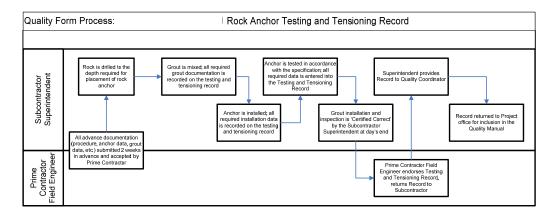

Process notes:

- Data report will consist essentially of a checklist indicating each piece of external documentation to be collected; these are to be collated to the report sheet when they are collected.
- Following submission of Rock Anchor Data Reports, they will be made available in the Project office for reference and/or subsequent Daily Rock Anchor Testing inclusion Tensioning Reports.

2.3.2.8 Subcontractor's Daily Rock Anchor Testing and Tensioning Report

The following diagram illustrates the flow of information related to the completion of Rock Anchor form:

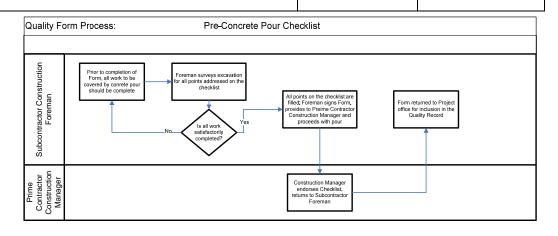

Process notes:

 ITP calls for only for testing of one anchor per day or every tenth anchor. The procedure outlined above applies only to those anchors specified for testing.

2.3.2.9 Pre-Concrete Pour Checklist

The following diagram illustrates the flow of information related to the completion of Pre-Concrete Pour Checklist form:

Page 30 of 80

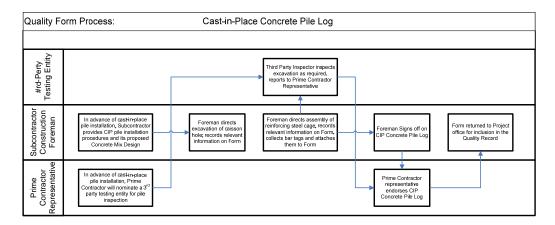

Process notes:

 All checklist points are to be evaluated in accordance with the specification.

2.3.2.10 Cast-in Place Concrete Pile Log

The following diagram illustrates the flow of information related to the completion of Cast-in-Place Concrete Pile form:

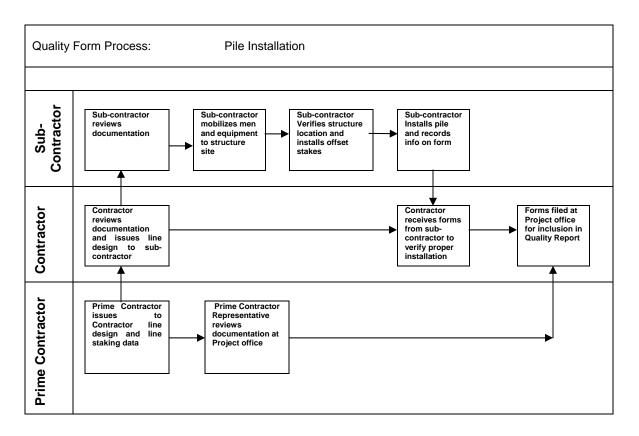

Process notes:

- 'Reinforcing Steel' field should be used to indicate the placement drawing number; bar tags taken from the reinforcing steel at the time of placement should be collected.
- Cast-in-place pile installation procedures will be provided to the Prime Contractor Two weeks in advance of installation of the first pile installed on the Project; this shall be deemed to be acceptable documentation of procedures for the entirety of CIP piles installed on the Project.
- It is expected that the Prime Contractor will nominate a single 3rd party testing entity at Project kick-off, and that this group will be available for efficient inspection of excavations as they come available.

2.3.2.11 Pile Installation

The following diagram illustrates the flow of information related to the completion of Cast-in-Place Concrete Pile form:

Process notes:

none

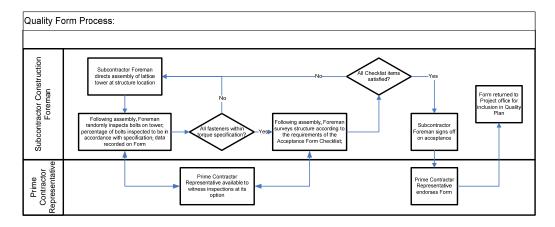

2.3.3 Forms Pertaining to Structure Erection

2.3.3.1 Structure Shake Down Report

 Note: The process associated with Structure Shakedown Report is included under Heading 2.3.1.5.

2.3.3.2 Tower Assembly Acceptance

The following diagram illustrates the flow of information related to the completion of Tower Assembly form:

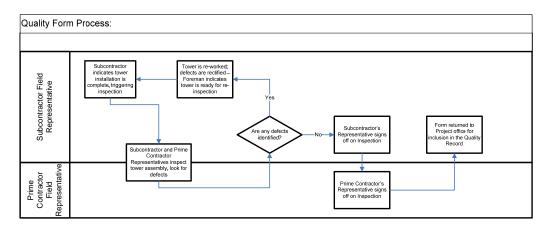

Process notes:

• (None)

2.3.3.3 Structure Assembly and Installation Inspection Report

The following diagram illustrates the flow of information related to the completion of Structure Assembly and Installation Inspection form:

Process notes:

 For the purpose of efficiency, the Subcontractor prefers that inspections should be completed immediately following tower erection.

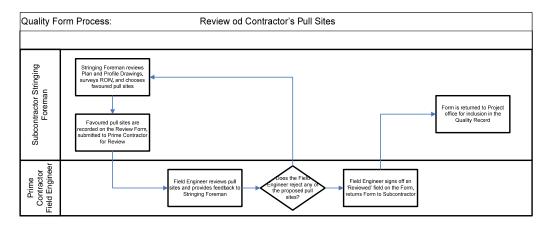

2.3.4 Forms Pertaining to Access and ROW issues

Note that in addition to the Form specified below, general ROW cleanup and conditioning is referenced in Tower Assembly Acceptance Form.

2.3.5 Forms Pertaining to Conductor Installation

2.3.5.1 Review of Contractor's Pull Sites

The following diagram illustrates the flow of information related to the completion of Pull Sites form:

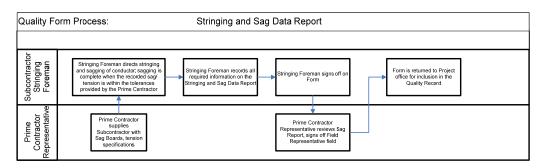

Process notes:

- It is expected that reviews of pull sites may be submitted and reviewed for discrete sections of line; this will be necessary for efficient execution of stringing work.
- Typically, pull sites will be chosen for the suitability of the ground and geography with respect to anchoring, accessibility for heavy stringing equipment, and to minimize wasted conductor.

2.3.5.2 Stringing and Sag Data Report

The following diagram illustrates the flow of information related to the completion of Stringing and Sag Data form:

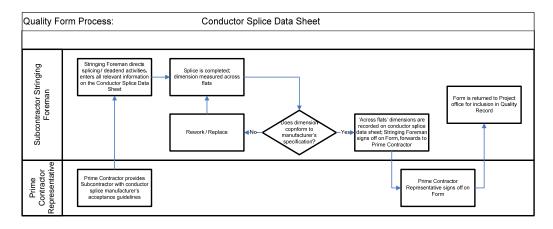

Process notes:

(None)

2.3.5.3 Conductor Splice Data Sheet

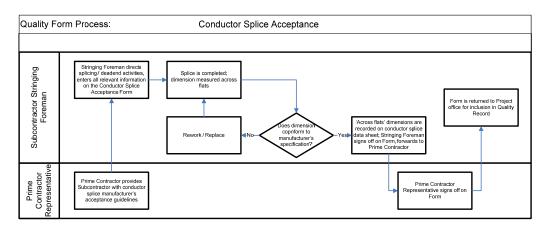

The following diagram illustrates the flow of information related to the completion of form:

2.3.5.5 Final Phase III Acceptance

The following diagram illustrates the flow of information related to the completion of form:

Process notes:

• (None)

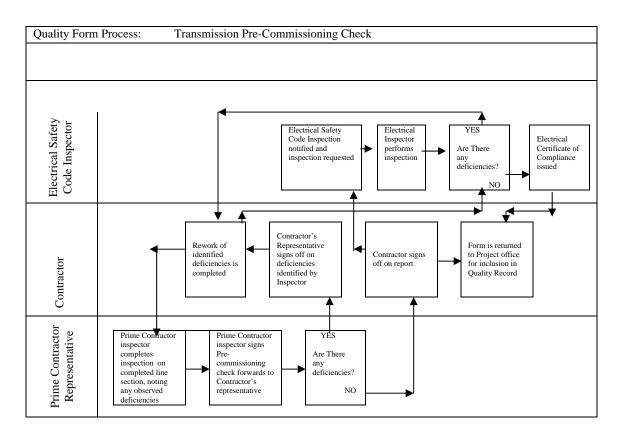

2.3.6 Forms Pertaining to Final Inspection and Commissioning

2.3.6.1 Ground Clearance Report

Note: This Form and the associated inspection will be completed by Valard Construction. These Forms will be submitted to the Prime Contractor for inclusion in the Quality Record.

2.3.6.2 Transmission Pre-Commissioning Check

The following diagram illustrates the flow of information related to the completion of Pre-Commission Check form:

Process notes:

CIME	P Exhibit P-	01886	I	Page 21	3

2.3.6.3 Patrol Worksheet

The following diagram illustrates the flow of information related to the completion of Patrol Worksheet form:

Process notes:

• (None)

2.4 Collection of Quality Documentation

In all cases the collection of forms and additional documentation will proceed as follows:

- 1. The Form will be initialized by the Foreman, Supervisor, or coordinator directing the work.
- 2. All qualitative Form fields (i.e. checklist-style documentation) will be completed:
 - a. In the field
 - b. At the time of work completion
 - c. By the tradesperson completing or directly supervising the work
- 3. All quantitative Form fields will be completed:
 - a. In the field
 - b. At the time of work completion
 - c. By the Foreman or Supervisor directing the work
 - d. Only by Foreman or Supervisor having personally performed the measurements represented or having directly observed the measuring process.
 - e. Documentation will be presented to the Prime Contractor's representative for review and/or endorsement (as required by the Prime Contractor's ITP) following which it is to be returned to the Foreman or Supervisor responsible for the work.
 - f. The Foreman or Supervisor will submit the Quality Form to the designated Quality Coordinator; the Quality Coordinator will be responsible for control and distribution of Quality Documentation.
 - 4. All documentation shall be maintained by Valard Construction in a proper filing system. The Prime Contractor's Quality Staff shall be granted access to these files for the purpose of review.

2.5 Control of Quality Documentation

The Quality Record shall be collected and maintained in the Subcontractor's Project office. The following process will apply to its control:

- 1. Upon submission of a Quality document, it will be listed as complete in the Reporting Summary.
- 2. The Form will be stored in hardcopy at the Subcontractor's Project office.
- 3. The Form will be scanned and stored electronically on the Subcontractor's remote server.

2.6 Distribution of Quality Documentation

The following process is proposed to satisfy all elements of the Quality Plan:

- e. All original documents shall be maintained by Valard Construction and shall be included in the turn over of documents at project completion.
- g. The form will be copied in triplicate.
- h. One copy of the Form will be entered into the Quality Record.
- One copy of the Form will be forwarded to the Project Manager or a designated coordinator for the purpose of tracking progress.

3 Materials

Quality control with respect to materials is to be administered under two primary headings:

- 1. Materials Supplied by the Prime Contractor
- 2. Materials Supplied by the Subcontractor

3.1 Materials Supplied by the Prime Contractor

With respect to materials supplied by the Prime Contractor, the goals of the PQP are as follows:

- 1. To confirm the quantity and condition of material received from the Prime Contractor's suppliers
- 2. To confirm the conformity of received material to its type design
- 3. To quantitatively record deviations of the lattice tower materials from their type design for the purpose of calculating changes to the Contract

To the end of achieving the above, the following controls are to be implemented:

- 1. Visual Inspections
- 2. Quantity Checks
- 3. Vendor Shortage Reporting
- 4. Nonconforming Material Quarantine

3.1.1 Visual Inspections

Visual inspections will be conducted on all material received by the Subcontractor on behalf of the Prime Contractor at the time of receiving in the marshalling yard.

Visual inspections will be documented and will be subject to review and confirmation by the Prime Contractor's Materials Coordinator.

3.1.2 Quantity Checks

Quantity checks will be documented and will be subject to review and confirmation by the Prime Contractor's Materials Coordinator.

Shortages that become apparent as a result of quantity checks will trigger the generation of a Vendor Shortage List (see following section).

Quantity checks specifically addressing component checks for missing and misfabricated components of the steel lattice tower kits will be documented.

3.1.3 Vendor Shortage Reporting

Vendor shortages will be documented.

3.1.4 Quarantine

Upon taking possession of the respective marshalling yard, the Contractor will identify an area of the yard to be reserved for quarantined parts. This area will be clearly marked and segregated from the remainder of the yard by ropes or tape.

Upon identification of substandard, damaged, or broken parts or components, such components shall be clearly marked with a tag bearing the following information:

- Large bold notice: NONCONFORMING PART
- Discrepancy: Description of the identified problem with the part
- Supplier: Name of supplier
- Date: Date nonconformity was identified
- Initial: Initial of individual taking part out of circulation

Once parts have been deposited in the Quarantine area, tags will not be necessary.

CIME	P Exhibit P-	UTBBb	1	Page 2	13
Valard A QUANTA SERVICES COMPANY				Quality Program	
Document Number: VCLP-02-7000-0-00	Revision No	umber:	Last Reviewe	ed:	
Project Quality Plan:		Originato	or:	Approved:	

3.2 Materials Supplied by the Subcontractor

With respect to materials supplied by the Subcontractor, the goals of the PQP are as follows:

- 1. To document the properties of received material for the internal requirements of the Subcontractor.
- 2. To document the properties of received material to assure the Prime Contractor of the Quality of such Material.

While the following Subcontractor-supplied materials are referenced in the ITP, no forms have been provided. As such, the Subcontractor will generate forms for the efficient tracking of these materials (Note: these forms are also referenced under headings 2.2 and 2.3):

- Borrow Pit documentation
- Road Crush
- Pit Run
- Sand
- Native Fill
- Concrete
- Reinforcing Steel
- Rock Anchors
- Grout

The information to be addressed in each of these forms is summarized in the table on the following page.

C <u>II</u>	MFP Exhibit P-	01886		Page 2	20
Valard A QUANTA SERVICES COMPANY				Quality Program	
Document Number: VCLP-02-7000-0-00	Revision N	umber:	Last Reviewe	ed:	
Project Quality Plan:		Originato	or:	Approved:	1

The following chart summarizes all Subcontractor supplied materials as specified in the Contract, along with proposed Quality controls:

Subcontractor Supplied Material	Product Controls	Submission Schedule	Comments
Earthwork Materials - Borrow Pits (General)	Borrow pit information to be submitted to Prime Contractor prior to provision of earthwork materials: -Address or coordinates of borrow pits -Summary of methods of excavation, mixing, screening, and transportation -Summary of the rated capacities of equipment used for borrow pit excavation and process -Summary of unusual mixing or excavating procedures -Summary of methods in use to control moisture and drainage -Information on disposition of oversized material -Information on the disposition of unsuitable material from stripping operations	Prior to use of borrow pit	
Road Crush	Information qualifying 'road crush' as conformant to Alberta Transportation Designation 4, Class 20: -Sieve analysis -Maximum density curve -Optimum Moisture curve	2 weeks prior to the commencement of material placement	
Pit Run	Information qualifying 'pit run' as conformant to Alberta Transportation Designation 6, Class 80: -Sieve analysis -Maximum density curve -Optimum Moisture curve	2 weeks prior to the commencement of material placement	
Sand	Information qualifying sand as conformant to SP-062200-4100-01 7.2.4: -Sieve analysis -Maximum density curve -Optimum Moisture curve	2 weeks prior to the commencement of material placement	
Native Fill	-Maximum density curve -Optimum Moisture curve	2 weeks prior to the commencement of material placement	
	-Concrete mix design, formulated in accordance with the requirements of the design drawing	2 weeks prior to the commencement of material placement	
Concrete	-Concrete Delivery Tickets conforming to CSA A23.1 Section 5.2.4.5 Information gathered by third-party testing contractor:	Immediately following placement	
	-Slump test results -Air content test results -Ambient temperature at time of delivery -Compressive strength test results	Immediately following availability of results

3.3 Audits

This section addresses only those audits associated Quality Assurance and Control for material.

3.3.1 General

Field-level audits will be instituted for the purpose of ensuring that Quality Assurance and Control measures are being implemented in accordance with the PQP. It is intended that an audit will be completed in approximately one day.

3.3.2 Procedure

The Subcontractor will compose a complete procedure for the completion of field-level audits. This procedure will implement the following elements:

- 1. Audits will include spot checks on documentation of new material arriving in the marshalling yard.
- 2. Audits will include an inspection of the measures used to identify the 'Quarantine' area of the marshalling yard.
- 3. Audits will include a review of collected borrow pit documentation.
- 4. Audits will include an observation of the received material inspection procedure.
- 5. Audits will include an inspection of reinforcement steel stored at the marshalling yard.
- 6. Audits will include a review of earthworks materials being installed at a structure location, complete with an inspection of the associated documentation.
- 7. The audit procedure will include a Form to be used for the purpose of documentation of the audit (referenced below).

3.3.3 Documentation

The audit documentation form will feature the following; where a field specifies 'notes', the field shall contain both a nonconformities column and a rectification column:

- 1. Information fields identifying:
 - a. Date of audit
 - b. Name of auditor
 - c. Identification of marshalling yard audited
 - d. Identification of Project office audited
- 2. Notes field for incoming material documentation
- 3. Notes field for quarantine area marking scheme
- 4. Notes field for borrow pit documentation.
- 5. Notes field for material receiving documentation
- 6. Notes field for reinforcing steel documentation
- 7. Notes field for installed earthworks material documentation

3.3.4 Frequency

Audits will be conducted on the following schedule (please note that this schedule will apply to:

- One audit will be conducted exactly 1 week following the first receipt of material.
- Following the initial audit, an additional two audits shall be conducted on two week intervals. These (three) audits correspond to the 'setup' period of the Project Quality Plan.
- After the 'setup' period, one audit will be conducted per month, on a random basis.

4 General Work Activities

This section describes Quality Control measures that are broad in application and that apply to multiple work activities.

4.1 Drawings

Under no circumstances will any of the Subcontractor's personnel, for the purpose of constructing or inspecting any element of the work represented in the Contract, consult drawings that are not marked "Issued for Construction".

4.2 Procedures

Where the Contract specifies that the Subcontractor must submit procedures for the work it completes, such documentation shall be collected prior to the start of work subject to the procedure requirement, and made available in the Project office.

Where specified procedure requirements are subject to certification (i.e. welding procedures) such procedures shall form a part of the Quality Record.

4.3 Certifications

Certification of procedures, where specified by the Contract, shall form a part of the Quality Record and be made available in the Project office.

Where Certifications are required as a part of the Quality record for a given work activity, copies of the certification are to be attached to the Quality Form associated with the work activity in question.

4.4 Trade Qualifications

Where the Contract specifies trade qualifications for a certain work activity (i.e. welding), such qualifications shall be documented in advance of the completion of work and be made available in the Project office.

Page 52 of 80

4.5 Supervisory Qualifications

Several work elements of the Contract specify Supervision by a Qualified Supervisor. In order to document its conformance to the requirements of the Contract, it is the Subcontractors intent to implement a Supervisory Qualification Registry. This registry will be kept in the Project office and updated each time a new Supervisor is introduced or promoted on the Project.

4.5.1 Supervisory Qualification Registry

The Supervisory Qualification Registry shall consist of a chart listing the following information for each of the Subcontractor's Supervisors:

- Supervisor's name
- Check-boxes for each Contract work activity specifying Supervisory Qualifications
- Signature column for Quality Coordinator

The Supervisory Qualification Registry will form an element of the Quality Record.

4.5.2 Documentation

Documentation of any Supervisor's qualifications will be provided at the request of the Prime Contractor in the form of a resume.

4.6 Calibration & Testing of Tools & Instruments

4.6.1 General

Several work elements of the Contract specify Calibration or testing of installation tools and/or measurement instruments. In order to document its conformance to the requirements of the Contract, it is the Subcontractors intent to implement the following Quality Control measures:

- Collection and preservation of Calibration / Testing Records
- Tool Control Registry

4.6.2 Calibration / Testing Records

Prior to its use on the Project, any tool or measuring device specified in the Contract for calibration or testing will be tested (a) by the Subcontractor where its personnel and/or equipment are capable of completing such an inspection or calibration or (b) by an external calibration or testing laboratory.

Following testing or calibration of a tool or instrument, the following will apply:

- The testing or calibration certificate will be submitted to and preserved in the Project office.
 - The testing certificate will feature the instrument's serial number unit number
- A sticker or tag will be affixed to the tool or instrument indicating the date of its last calibration, and the date of its next calibration.
- An automated message will be initiated in Microsoft Outlook by the Quality Coordinator one month before the tool or instrument's next calibration.

Testing and calibration certificates will be preserved in the Project office and will form an element of the Quality Record.

4.6.3 Tool Control Registry

The tool control registry shall consist of a chart featuring the following columns:

- Tool unit number
- Description (2-4 words as required)
- Manufacturer
- Model Number
- Calibration Date
- Date of next calibration

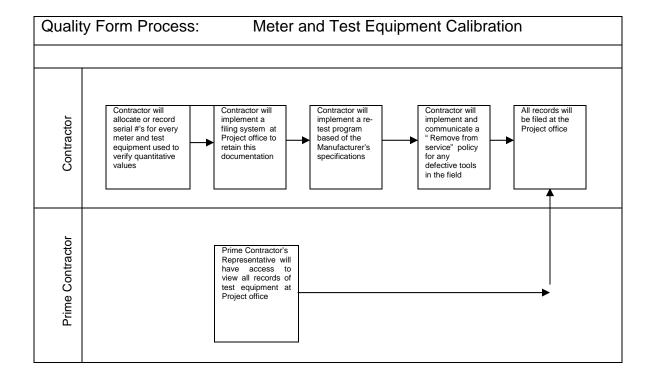

The Tool Control Registry shall form an element of the Quality Record.

4.6.4 Periodicity of Calibration / Inspection

With regard to periodicity, the period between calibrations of a given tool or instrument shall be determined from the following according to the following precedence:

- 1. Prime Contractor's requirements as specified in the Contract
- 2. Legislative requirements
- 3. Manufacturer's recommendations
- 4. 1 year (specified in the absence of any other recommendations)

Notwithstanding the above the shortest period specified by items (1), (2), and (3) shall take absolute precedence.

4.7 Audits (Work Activities)

This section addresses only those audits associated with Quality Assurance and Control for work activities.

4.7.1 General

CIMFI	P Exhibit P-	01886		Page 2	28
Valard A QUANTA SERVICES COMPANY				Quality Program	
Document Number: VCLP-02-7000-0-00	Revision N	umber:	Last Reviewe	ed:	
Project Quality Plan:	•	Originato	\r·	Approved:	1

Field-level audits will be instituted for the purpose of ensuring that Quality Assurance and Control measures are being implemented in accordance with the PQP. It is intended that an audit will be completed in approximately one day.

4.7.2 Procedure

The Subcontractor will compose a complete procedure for the completion of field-level audits on work activities. This procedure will implement the following elements:

- 1. Audits will include spot checks on documentation for material installed on the site.
- 2. Audits will include supervisory spot checks to ensure (a) that each work activity being completed is supervised by a supervisor listed on the Supervisory Qualification Registry, and (b) that Supervisor is qualified to supervise the work being completed.
- Audits will include spot checks to ensure that any tools or measuring devices being used in the completion of work that are subject to testing or calibration are listed on the Tool Control Registry and further that any such tools carry a valid certificate of calibration or testing.
- 4. Audits will include an inspection of onsite documentation being completed for the purpose of documenting the completion of work and/or the inspection thereof.

- 5. Audits will include a review of the procedures documented in the Quality Record, and spot checks on affected activities to ensure that these activities are being completed in accordance with the governing procedure.
- 6. Audits will include a review for the purpose of identifying any related Quality issues, and reviewing the Project Quality Plan to ensure that it conforms to the requirements of the Contract.
- 7. The audit procedure will include a Form to be used for the purpose of documentation of the audit (referenced below).
- 8. The audit procedure will include reference to the identification of root causes and the correction thereof.

4.7.3 Documentation

The audit documentation form will feature the following; where a field specifies 'notes', the field shall contain both a nonconformities column and a rectification column:

- 1. Information fields identifying:
 - a. Date of audit
 - b. Name of auditor
 - c. Identification of marshalling yard audited
 - d. Identification of Project office audited
- 2. Notes field for installed material documentation
- 3. Notes field for supervisory qualification documentation
- 4. Notes field for tool and instrument and documentation
- 5. Notes field for work records documentation
- 6. Notes field for procedures documentation
- 7. Notes field for Contract conformity

4.7.4 Frequency

Audits will be conducted on the following schedule:

- One audit will be conducted exactly 1 week following the first completion of onsite work.
- Following the initial audit, an additional two audits shall be conducted on two week intervals. These (three) audits correspond to the 'setup' period of the Project Quality Plan.
- After the 'setup' period, one audit will be conducted per month, on a random basis.

- If a deficiency is identified, a formal notification report will be issued to the sub-contractor informing them of:
 - 1. The nature of the deficiency
 - 2. Potential severity or impact of deficiency
 - 3. Timeframe to Address Deficiency
 - Minor- 14 working days
 - Moderate- 7 working days
 - Major- 2 working days

4.8 Nonconformities

Nonconformity refers to an identified condition where a material or its associated documentation does not conform to the measures and procedures specified in the Project Quality Plan.

4.8.1 Stop Work Authority

Where a systematic nonconformity has been identified, the Quality Manager is empowered to halt any associated work until such time as he is satisfied with regard to the fact that the systematic nonconformity has been addressed or eliminated.

4.8.2 Nonconformity Reporting

'Nonconformity Reporting' as described in this section refers to the identification and tracking of material and construction nonconformities under conditions that are not explicitly addressed by the ITP.

The Contractor shall employ a nonconformity reporting Form for the purpose of logging nonconformities. Nonconformity Reports can be triggered on authority of coordinators in all management groups, construction Foremen and Supervisors, the Project Manager, or the Quality Manager. The following situations will trigger a Nonconformity Report:

- 1. Nonconformity is identified in the course of an audit.
- Nonconformity is observed by the material manager or a subordinate in the course of material distribution

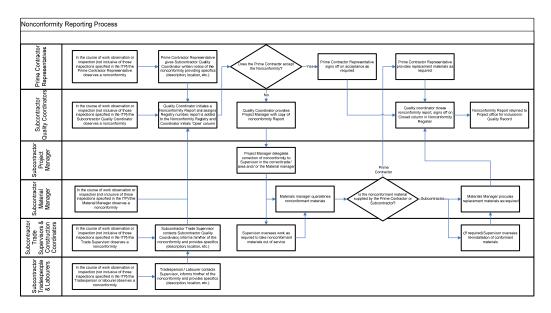

CIMFP	CIMFP Exhibit P-01886			Page 23	31
Valard A QUANTA SERVICES COMPANY				Quality Program	
Document Number: VCLP-02-7000-0-00	Revision N 1	umber:	Last Reviewe	ed:	
Project Quality Plan:		Originato	or:	Approved:	1

- 3. Nonconformity is observed by a tradesperson or labourer in the field and reported to their Foreman or Supervisor
- 4. Nonconformity is observed by an agent of the Prime Contractor

All Non-conformances shall be copied to the Quality Manager as soon as they are initiated. All dispositions shall be submitted to the Quality Manager, and the Client's Quality Representative, prior to the remedial work commencing, for approval. No remedial work is to commence until this approval is obtained.

4.8.2.1 Procedure

The procedures to be followed in the identification and tracking of nonconformities is illustrated in the following diagram:

All non conformances shall be copied to the Quality Manager as soon as they are initiated.

All dispositions shall be submitted to the Quality Manager, and the Client's Quality Representative, prior to the remedial work commencing, for approval.

No remedial work is to commence until this approval is obtained

4.8.2.2 Nonconformity Control

The primary mechanisms of nonconformity control to be implemented are the Material Nonconformity Report Form and the Nonconformity Register.

CIMFP	IMFP Exhibit P-01886			Page 2		
Valard A QUANTA SERVICES COMPANY				Quality Program		
Document Number: VCLP-02-7000-0-00	Revision N 1	umber:	Last Reviewe	ed:		
Project Quality Plan:		Originato	or:	Approved:		

Nonconformity Report Forms shall form an element of the Quality Record.

Page 61 of 80

4.8.2.3 Nonconformity Report Form

The Nonconformity Report Form will feature the following information:

- Nonconformity Registry number
- Name of individual that observed the Nonconformity
- Name and signature of Quality Coordinator
- Description of Nonconformity
- Description of rectification
- Description of root causes

Nonconformity Report Forms are to be filled out only by the Quality Coordinator.

4.8.2.4 Nonconformity Register

The Nonconformity Register forms a part of the Quality Record.

The Nonconformity Register will consist of a grid wherein each row provides the information associated with a given Nonconformity Report. The columns of the Nonconformity Register will feature the following information for each Nonconformity Form:

- Nonconformity Registry Number
- Brief (2-3 words) Description
- 'Open' initial column
- 'Closed' initial column

5 Specific Work Activities

This section of the PQP directly addresses the manner in which Quality Control measures will be applied to specific work activities, as required by the Contract and Tender Documents and as directed by the PQP.

5.1 Construction of Access and Right-of-Way

The goals of the Project Quality Plan with respect to Construction access and ROW are as follows:

- 1. To ensure that access is constructed in accordance with the requirements of the Prime Contractor.
- 2. To promote and maintain the positive relationships of the Prime Contractor with Landowners along the ROW.
- 3. To ensure that gates and fencing are established in accordance with the requirements of the Prime Contractor.
- 4. To ensure that the ROW is restored in accordance with agreements between the Prime Contractor and affected landowners along the ROW.
- 5. To ensure that fence and access construction, as well as ROW restoration are documented for the purpose of assuring the Prime Contractor of the Quality of work completed.

Note: Control of access to the ROW is addressed in the Subcontractor's Access Plan.

Note: Environmental issues are addressed in the Subcontractor's environmental plan.

5.1.1 Access and Approaches

To ensure the conformance of constructed access roads and approaches, the Subcontractor Quality Coordinator, in cooperation with the Subcontractor Lands Manager will maintain a complete set of Plan and Profile drawings for each awarded section of ROW. In this set of Plan and Profile drawings, the following data will be recorded:

- Location and diagrams of every off-ROW access road or trail constructed by the Contractor
- An information box on each page indicating the status of the section of ROW

 Drawing amendments showing precisely which section of the ROW is addressed on the Plan and Profile drawing in question

Originator:

Approved:

 Information boxes for each access road or trail indicated on the Plan and Profile drawings indicating the status of the access facilities

When access to a section of ROW is granted by the Prime Contractor, the Subcontractor Lands Manager will mark all plan and profile drawings affected by the section of ROW to which access has been granted as 'Open'. The Land Manager will then affix a status label to the drawings for each off-ROW access trail. The status label will contain one of the following comments:

- Proposed Entered in the status box when an access trail has been determined to be required for access to one or more structures.
- Approved Entered in the status box when an access trail has been approved for construction or use.
- Abandoned Entered in the status box when the use of an access trail is no longer required.

Where a proposed access trail conforms to the Prime Contractor's access plan or any amendments thereto, the trail will automatically be assigned 'Approved' status.

Typically, access trails will only be assigned 'Abandoned' status after all stringing activities have been completed, along with pre-commissioning reports.

5.1.2 ROW Restoration

Project Quality Plan:

To ensure the conformance of ROW restoration with the requirements of the Prime Contractor (i.e. conformance with the Prime Contractor's agreement with the Landowner) the Subcontractor Quality Coordinator in cooperation with the Subcontractor Lands Manager will maintain a complete set of Plan and Profile drawings for each awarded section of ROW. In this set of Plan and Profile drawings, the following data will be recorded:

- The status of each section with respect to ROW access
- 'Redline' Mark-ups of areas that have been disturbed, along with note-box labels describing the condition of the ROW.

Quality Program

auch et a contract contract en			
Document Number: VCLP-02-7000-0-00	Revision Number: 1	Last Reviewe	ed:
Project Quality Plan:	Originato	r:	Approved:

The Subcontractor Lands Manager will be responsible for confirming the condition of the ROW. Following completion of construction and stringing activities, the lands manager will be responsible for directing and confirming the restoration of the ROW. Restoration of the ROW will be conducted in accordance with the requirements of the Contract.

If at any time over the course of ROW restoration a landowner directly expresses dissatisfaction with ROW restoration efforts, the Subcontractor will inform the Prime Contractor and continue with restoration activities under the Contract or any changes thereto.

Conformance of ROW restoration to the Contract will be demonstrated to the Prime Contractor by way of inspection. Documentation of the conformance of ROW restoration to the requirements of the Prime Contractor will be recorded.

5.2 Foundation Installation

The goals of the Project Quality Plan with respect to Foundation Installation are as follows:

- To ensure that the positions of installed foundations conform to the positions described by the Prime Contractor's established markers.
- To ensure that concrete employed in the construction of foundations conforms to the requirements of the Prime Contractor.
- To ensure that the compaction of backfill materials and subsurface materials beneath the structure conform to the Prime Contractor's requirements.
- 4. To ensure that the placement of reinforcing steel is completed in accordance with the Prime Contractor's requirements
- 5. To ensure that soils not conforming to the Prime Contractor's expectations are observed and reported.
- 6. To assure the Prime Contractor that all foundation work completed by the Subcontractor is completed in accordance with the Prime Contractor's requirements.

5.2.1 Positional Tolerances

The following measures will instituted to ensure that towers are installed in accordance with the Prime Contractor's drawing package:

C <u>IMI</u>	MFP Exhibit P-01886			Page 23	
Valard A QUANTA SERVICES COMPANY				Quality Program	
Document Number: VCLP-02-7000-0-00	Revision N	Revision Number:		ed:	
Project Quality Plan:		Originate	or:	Approved:	

- 1. Upon arrival onsite the Subcontractor's personnel will establish offset stakes to allow space for the completion of work activities while preserving the locations of the Prime Contractor's stakes.
- 2. While foundation construction activities proceed, the offset stakes will be used to establish and confirm the positional dimensions of the foundation during the construction of forms and installation of caissons, and/or rock anchors.
- 3. Following the establishment of the lower elements of the foundation, a tower template will be used to confirm the location of the stub legs relative to each other. With the stub legs secured to the template, a (Subcontractor-employed) surveyor will confirm the location and orientation of the stub legs. The template and stub legs will then be secured with temporary works for the duration of tack welding or initial concrete setup.

For the purpose of assuring the Prime Contractor of the conformance of the positional dimensions of the installed tower to the tolerances provided by the Prime Contractor, the positional dimensions will be confirmed by the surveyor and recorded on Stub Angle Checklist Form. The site of the work will be available to the Prime Contractor for inspection at any time over the course of construction.

Page 66 of 80

Project Quality Plan:		Originato	or.	Approved:	

VIMED Exhibit D 01006

5.2.2 Concrete Testing

The following measures will be implemented to ensure that all concrete installed over the course of the Project satisfies the requirements of the Prime Contractor with respect to its physical properties:

- 1. The concrete mix design will be submitted to the Prime Contractor for review two weeks prior to the delivery of concrete to the site.
- 2. No concrete will be accepted onsite if delivery tickets are not provided. These tickets will be preserved in the Quality Record and attached to Foundation Report for Structure for the purpose of associating loads of concrete (and their associated test cylinders) with the structure locations at which they were deposited.
- 3. The Subcontractor will cooperate with the Prime Contractor's Third Party testing subcontractor with respect to the coordination of concrete testing (slump test, break test, compressive testing, etc.).

5.2.3 Compaction Testing

Compaction testing will be performed in accordance with the requirements of the Contract; associated documentation will be collected by the Subcontractor for inclusion in the Quality Record and attachment to any required Forms. All relevant documentation will also be forwarded to the Prime Contractor. In the event that compaction testing reveals incompetent soils, the Subcontractor's Supervisor will immediately notify the Prime Contractor's representative.

Page 67 of 80

CIMFI	P Exnibit P-	U1886)	Page 24	
Valard A QUANTA SERVICES COMPANY				Quality Program	
Document Number: VCLP-02-7000-0-00	Revision Number:		Last Reviewed:		
Project Quality Plan:		Originat	or:	Approved:	1

5.2.4 Forming and Placement of Reinforcing Steel

The following measures will be implemented for the purpose of ensuring that reinforcing steel is formed and placed in accordance with the requirements of the Prime Contractor:

- 1. The Subcontractor will submit CWB-approved welding procedures to the Prime Contractor for review 2 weeks prior to the completion of welding in the assembly and/or placement of reinforcing steel. In the completion of welding on any reinforcement steel installed on the Project, these welding procedures will be strictly adhered to (Note: Where welding is unnecessary in the assembly and placement of reinforcing steel, no such procedures will be submitted; the Subcontractor does not intend to weld together reinforcing steel except where it is specified by the Prime Contractor's documents).
- 2. The Subcontractor will submit bar placement diagrams to the Prime Contractor for review two weeks prior to the placement of reinforcing steel in a structure foundation (spread footing or castin-place caisson). For the generation of these drawings, the Subcontractor will require that the Prime Contractor distribute 'Issued for Construction' foundation drawings.
- 3. The Subcontractor will collect and archive mill test reports in the Quality Record at the time of receiving reinforcing steel at the Project marshalling yard. Mill test reports will be reviewed for the purpose of ensuring that received steel conforms to the requirements of the Prime Contractor with respect to the physical properties of the steel. In the event that a shipment of steel does not satisfy the requirement of the Prime Contractor, it will be returned to the supplier.
- 4. At the time of receiving, the Subcontractor will clearly label received reinforcing steel (or bundles thereof) with weather-proof bar tags referring the steel back to its mill test report. These tags will remain with the steel until such time as it is ready for installation at a foundation location.

Page 68 of 80

For the purpose of assuring the Prime Contractor of the conformity of installed reinforcing steel to its requirements, at the time of installation, bar tags will be removed from the reinforcing steel and affixed to one of the following Quality Reports (dependent upon the foundation element installed):

- 1. Foundation Report for Structure
- 2. Cast-in-Place Concrete Pile Log

These forms, along with the associated bar tags, will be submitted to the Prime Contractor as an element of the Quality Record.

5.2.5 Subsurface Confirmation

The following measures will be adopted for the purpose of confirming that the subsurface conditions encountered in the course of excavation match the subsurface conditions predicted by the Prime Contractor, or for the purpose of ensuring that — in the case where subsurface formations do not conform to the predictions of the Prime Contractor — the Prime Contractor is informed of the nature of the subsurface condition:

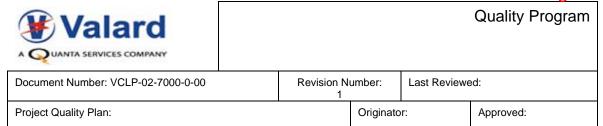

1. The Subcontractor will observe the nature of excavated soils and record such information.

5.3 Tower Installation

The goals of the PQP with respect to tower installation are as follows:

- 1. To ensure the proper fit and engagement of tower members.
- 2. To confirm the length and type of bolts installed on towers are in accordance with the requirements of the Prime Contractor.
- 3. To prevent the installation of bent, deformed, or damaged members on towers.
- 4. To ensure that test devices used in the assembly and erection of towers are properly calibrated.
- 5. To ensure that towers are installed on plumb.
- 6. To assure the Prime Contractor of the Quality of all tower installations.

5.3.1 Fit and Engagement

For the purpose of ensuring the fit and engagement of installed steel lattice tower members the Subcontractor will adopt the following measures:

- 1. At the time of assembly of tower panes or box sections assembly personnel will inspect joined members to ensure that there are no gaps at bolted joints (or in the case of back-to-back L-beams with spacers, personnel will check to ensure uniformity of the gap).
- 2. At the time of setting of the lower section of the tower on the foundation stub legs, the Foreman will conduct a visual inspection of the joint between the lower tower members and the stub legs to ensure there is no gap between the members and the tower is not twisted at the stub.
- 3. At the time of complete tower assembly (i.e. assembly of panes and sections) installation personnel and Foreman will conduct a visual inspection of joint plates and associated seams to ensure there is no gap between the joined sections of tower.
- 4. Additional spot inspections of tower arms will occur at the time of conductor installation and spacer installation. Personnel involved in these activities will report any discrepancies to their Supervisor who will in turn trigger a nonconformity report.
- 5. Subcontractor Foremen / Supervisors will perform post-assembly inspections of towers for the purpose of identifying nonconformities.

The following documentation will be provided to the Prime Contractor for the purpose of assuring the fit and engagement of completed tower assemblies:

- 1. Tower Assembly Acceptance Form
- 2. Structure Assembly and Installation Inspection Report

5.3.2 Length and Type of Bolts

The Subcontractor will adopt the following measures to ensure the correct length and type of bolts:

- 1. Assembly personnel will be directed to assemble towers using only hardware provided in tower kits by the Prime Contractor.
- 2. Assembly personnel will be given information regarding the visual identification of properly chosen size of fastener both before and after installation. Information provided will cover the following points:
 - a. Selecting the correct diameter of fastener

- b. Selecting the correct length of fastener
- c. Confirming the correct length of fastener (following installation)
- At the time of tower inspections (whether following partial or complete assembly), supervisory personnel will be directed to examine installed fasteners to ensure they have been chosen properly and are of appropriate length.
- 4. The Subcontractor will cooperate with the Prime Contractor with respect to the coordination of inspections of towers (it is assumed the Prime Contractor will also be examining fasteners to confirm correct choice).
- 5. Fastener choice will be cited as a potential element to be observed in the submission of nonconformity Reports.

For the purpose of assuring the Prime Contractor that towers have been assembled using the correct fasteners, fastener choice shall form an element of the inspections associated with the following Forms:

- 1. Tower Assembly Acceptance Form
- 2. Structure Assembly and Installation Inspection Report

5.3.3 Bent, Deformed, or Damaged Items

For the purpose of identifying, eliminating, and/or correcting bent deformed or damaged tower members and/or fasteners, the following measures will be implemented:

- Tower packages will be inspected both at the time of receiving and at the time of arrival onsite for assembly. Bent, deformed, or damaged members will be identified and logged on the structure shakedown report for notification of the Prime Contractor.
- 2. As towers are assembled, individual parts will be examined for fit and dimension. Bent, deformed, or damaged members will be identified and logged on the structure shakedown report for notification of the Prime Contractor.
- In the event that the Subcontractor identifies bent, deformed or damaged items, it will make written application to the Prime Contractor to the Prime Contractor of its intentions for the members (rework, remanufacture, re-order, etc.) prior to proceeding.

Page 71 of 80

CIMF	P Exhibit P-	01886		Page 244	
Valard A QUANTA SERVICES COMPANY				Quality Program	
Document Number: VCLP-02-7000-0-00	Revision N	Revision Number:		ed:	
Project Quality Plan:		Originato	or:	Approved:	

- 4. Assembly personnel will be directed not to install bent or damaged members on towers.
- 5. At the time of tower inspections (whether following partial or complete assembly), supervisory personnel will be directed to examine tower members to ensure they are free of damage and defects.
- 6. The Subcontractor will cooperate with the Prime Contractor with respect to the coordination of inspections of towers (it is assumed the Prime Contractor will also be examining members to confirm that they are free of damage).
- 7. Member condition will be cited as a potential element to be observed in the submission of nonconformity Reports.

For the purpose of assuring the Prime Contractor that all towers have been assembled using only members that are straight and free of damage, member damage will be an element addressed in the inspections associated with the following Forms:

- 1. Structure Shakedown Report Form
- 2. Tower Assembly Acceptance Form
- 3. Structure Assembly and Installation Inspection Report

5.3.4 Installation Bolt Torque

Note: Because the two subjects are closely related and inspected in sequence, Installation Bolt Torque is addressed below along with Locking Devices.

5.3.5 Testing Tools and Calibration

In order to ensure that testing tools used in the assembly of towers conform to the requirements of the Contract, the following calibration schemes will be implemented:

- 1. Where power wrenches are used to torque bolts:
 - a. Calibrated slip devices will be used to prevent over-torque situations.
 - b. The Subcontractor will either procure the services of a testing laboratory to calibrate the slip devices daily, or it will purchase a standard and develop a testing rig for the purpose of calibrating slip devices on a daily basis.
- 2. Where manual wrenches are used to torque bolts:
 - a. To prevent over-torque situations, power wrenches having a maximum torque output less than the minimum torque specified in the Contract (40 ft-lbs) will be used for initial installation of bolts on the structure
 - b. Final torque installation will be completed using calibrated manual torque wrenches.
 - c. The Subcontractor will either procure the services of a testing laboratory to calibrate the slip devices monthly, or it will purchase a standard and develop a testing rig for the purpose of calibrating torque wrenches on a monthly basis.

For the purpose of assuring the Prime Contractor of the conformity of its torque devices to the requirements of the Contract, the following documentation will be included in the Quality Record for submission to the Prime Contractor (ref. Section 4.5 of the PQP):

- 3. Calibration / Testing Records
- 4. Tool Control Registry
- 5. Labels applied to torque devices

5.3.6 Locking Devices (and Installation Bolt Torque)

In order to ensure that locking devices and torque devices are used in accordance with the requirements of the Contract the following measures will be adopted:

- Copies of the torque charts for fasteners used in tower assembly as provided in the Contract will be distributed in the field (ideally these could form a part of the acceptance form or be printed on the back thereof).
- 2. Assembly personnel will receive training with respect to the use of power wrenches (with and without torque limiting devices) and manual torque wrenches.
- 3. Before the bolts to be installed in any given structure or surface thereof are secured at rated torque, all bolts on that structure or surface will be installed loosely, following which all bolts on the structure or surface will be installed to rated torque.
- 4. After each nut on the structure is torqued, the individual confirming the fastener torque will apply red permanent marker to the back side of the bolt.
- 5. After all bolts on a structure or surface are correctly torqued and the bottoms marked with red permanent ink, the structure will be inspected by the Foreman or Supervisor; the inspecting party will examine all fasteners for proper size and length, and torque-test 10% of the fasteners with a manual torque wrench. The inspection will then be recorded on the appropriate Quality Form.
- 6. Following the inspection of the structure or surface by the supervisor, each bolt will be deformed in the first thread emerging from its associated note using a punch/chisel and hammer ('caulking' or 'corking'). After each bolt is deformed, the individual performing the corking will then apply black permanent ink to the back of the bolt.
- 7. Following corking (caulking) and marking, the supervisor will conduct a second inspection.

The installation and marking procedure described in steps 4-7 is routine for the Subcontractor's tower assembly crews; it is referred to as the 'Torque and Cork' method.

Document Number: VCLP-02-7000-0-00	Revision N 1	umber:	Last Reviewe	ed:		
Project Quality Plan:		Originato	or:	Approved:		

For the purpose of assuring the Prime Contractor of the conformance of tower assemblies to the requirements of the Contract, the following Forms will be used to document the inspections conducted in the course of and following assembly:

- 1. Tower Assembly Acceptance Form
- 2. Structure Assembly and Installation Inspection Report

5.3.7 Plumb / Straightness of Erected Towers

Because of the rigid nature of lattice towers, tubular steel monopoles, and wood pole H-frames, the straightness of a tower is entirely dependent upon a level foundation. As such, ensure that a tower is plumb equates precisely to ensuring that the foundation is level. The following measures will be implemented for the purpose of ensuring that towers are installed in plumb in accordance with the requirements of the Contract:

- 1. Upon arrival onsite the Subcontractor's personnel will establish offset stakes to allow space for the completion of work activities while preserving the locations of the Prime Contractor's stakes.
- While foundation construction activities proceed, the offset stakes will be used to establish and confirm the positional dimensions of the foundation during the construction of forms and installation of caissons, and/or rock anchors.
- 3. Following the establishment of the lower elements of the foundation, a tower template will be used to confirm the location of the stub legs relative to each other. With the stub legs secured to the template, a (Subcontractor-employed) surveyor will confirm the location and orientation of the stub legs (this process will be inclusive of confirming that the template is level). The template and stub legs will then be secured with temporary works for the duration of tack welding or initial concrete setup.

For the purpose of assuring the Prime Contractor of the conformance of tower assemblies with respect to plumb, each installation will be documented on a Stub Angle Checklist.

5.4 Installation of Conductors

The goals of the PQP with respect to the installation of conductors are as follows:

- 1. To ensure that splice and deadend connectors are installed in accordance with the Prime Contractor's requirements.
- 2. To ensure that conductors are installed at the sag specified by the Prime Contractor.
- 3. To ensure that conductor tie-ins are completed in accordance with the requirements of the Prime Contractor.
- 4. To assure the Prime Contractor of the Quality of all conductor installations.

5.4.1 Sleeves, Deadends, and Electrical Connectors

For the purpose of ensuring the conformance of sleeves, deadends, and connectors to the requirements of the Contract, the following measures will be adopted:

- 1. All personnel involved in conductor bonding will receive training in the use of compression-type splices and deadends.
- 2. Completed splices will be inspected in detail for defects; unsatisfactory splices will be cut out and replaced.
- Compression-type splices will be inspected using go-no-go gauges 'across the flats'. Personnel will be provided with training in the use of go-no-go gauges.
- 4. At the option of the Prime Contractor, all implosive connectors will be installed in the presence of the Prime Contractor's Representative.
- 5. Implosive type sleeve connectors will be installed in accordance with Specifications.
- 6. Compression and implosive type connectors will be x-ray inspected at the Prime Contractor's option.

To assure the Prime Contractor of the conformance of deadends, sleeves, and connectors to the requirements of the Contract, splicing and connecting activities will be documented on the following Forms:

- 1. Conductor Splice Data Sheet
- 2. Conductor Splice Acceptance Form

To assure the Prime Contractor that the Subcontractor has properly accounted for all implosive sleeve connectors in its possession, the Subcontractor will document the storage and installation of implosive sleeve connectors on the following Forms:

- 1. Blasting Logs
- 2. Magazine Logs

5.4.2 Sag Verification

For the purpose of verifying the sag of installed conductors, the following measures will be implemented:

- In advance of stringing / sagging operations, the Subcontractor's proposed butt down and pulling setup areas will be submitted to the Prime Contactor for review.
- 2. Butt-down locations will be chosen so as to minimize conductor waste.
- 3. The Subcontractor will submit a written request for sag data to the Prime Contractor.
- 4. Stringing sheaves will be chosen to conform to the requirements of:
 - a. The Contract
 - b. The conductor manufacturer
 - c. IEEE standard 524
- 5. Stringing activities will be supervised by a qualified Supervisor with extensive experience in the tension stringing method of bundled conductor installation.
- 6. Stringing activities will be performed in conformance with the requirements.

For the purpose of assuring the Prime Contractor of the conformance of strung conductor to the requirements of the Contract, sagging activities will be documented in the following Forms:

- 1. Review of Contractor's Pull Sites Form
- 2. Stringing and Sag Data Reports

5.4.3 Ground Clearance Confirmation

As stated in the specification, ground clearance confirmation will be the responsibility of the Prime Contractor. The Subcontractor will cooperate with the Prime Contractor's Representative with respect to providing schedule information and confirming which sections of line are ready for ground clearance confirmation.

Project Quality Plan:		Originato	or.	Approved:	1

5.4.4 Conductor tie-ins

For the purpose of ensuring that conductor tie-ins are completed in accordance with the requirements of the Contract the following measures will be implemented:

- 1. Clipping personnel will receive training in the correct installation of tie-in hardware in accordance with specifications. This training will be inclusive of:
 - a. Discussion of insulator handling and care
 - b. Discussion of hardware alignment and installation
 - c. Discussion of correct installation and orientation of cotter keys to allow for hotstick installation / removal.
- 2. Clipping personnel will be instructed in the correct installation of insulator string tie-ins with respect to offset distance.
- 3. Inspections will be conducted to ensure that conductor tie-in hardware is properly installed in accordance with the specification.

For the purpose of assuring the Prime Contractor that tying-in activities have been completed in accordance with the requirements of the Contract, the Subcontractor will document tying-in activities on Final Phase III Acceptance Form.

5.5 Final Inspections and Commissioning Patrols

The goals of the PQP with respect to final inspections and commissioning patrols are as follows:

- 1. To provide a final opportunity to ensure that all Quality-related properties of sections of the transmission line are confirmed prior to final handover of the line for commissioning.
- 2. To ensure that all commitments of the Subcontractor under the Contract have been satisfied prior to its closure of such Contract.
- 3. To assure the Prime Contractor of the overall Quality of all works constructed under the Contract prior to final handover of the transmission line.

Final inspections and patrols will be conducted and documented in accordance with Contract and in full cooperation with the Prime Contractor. These inspections will be documented in the following Forms:

- 1. Transmission Pre-Commissioning Check Form
- 2. Patrol Worksheet

Date: Sept. 23, 2003 F		Revision:	5	Revised by:	A. Felczak	Date:	Jan. 3, 2012		

4.1 SUBCONTRACTOR POLICY

It is the policy of Valard that all direct hire and subcontractor employees are entitled to work in a safe environment. To achieve this, every reasonable effort shall be to eliminate hazards and prevent incidents that cause injury to workers, environmental damage and property damage. This effort shall include controls applied both before awarding a subcontract and during the execution of the work.

Valard believes that taking proper precautions can prevent incidents. It is the duty of every subcontractor, in the performance of their subcontract, to cooperate with and comply fully with Valard's Health, Safety & Environmental Manual and Provincial/Federal Health, Safety & Environmental Regulations.

4.2 PRECONTRACT CONTROLS

All subcontractors are to be evaluated before being considered for a subcontract to ensure they are capable of meeting Valard's safety standards.

Subcontractors being evaluated must submit the following documentation to Valard.

- Copy of subcontractor's safety manual
- Completed copy of Form 4.5.2 Subcontractor Prequalification Questionnaire Form
- Copy of A WCB clearance letter. If the subcontractor is unable to provide the document, the client must approve them prior to them entering the worksite.

The Vice President of Health and Safety will review these documents for acceptability. The subcontractor can be rated as "approved", "approved with conditions" and "rejected". Subcontractors with a "rejected" rating may be considered only if there are no "approved" or "approved with conditions" rated contractors available.

Subcontractors are to be advised that they are responsible for screening any of their subcontractors they retain to ensure they are capable of meeting Valard's Safety standards.

Valard's Health, Safety and Environmental Department will review and evaluate subcontractor's 4.5.2 Prequalification Questionnaire Form by completing Form # 4.5.3 and will either approve their Manual or request that Valard's HS&E Manual be followed.

4.3 PRECONSTRUCTION CONTROLS

Before subcontractors are permitted to mobilize on site and begin work, the following steps must be taken:

- Subcontractor Policy Agreement Form #4.5.1 must be signed and forwarded to the Edmonton office.
- A copy of the subcontractor's safety manual must be submitted to the project Area Supervisor.
- WHMIS Material Safety Data Sheets are to be submitted to the Area Supervisor or the Safety Coordinator for every controlled product the subcontractor uses or stores on site. MSDS's are not valid if they are over three years old. (See Section 13 of this Manual)

All subcontractor personnel must complete CSTS (Construction Safety Training System, offered by the Alberta Construction Safety Association) if:

Docum	nent D	Description				Sub-Co	ontract	or Controls
Created By: A. Felczak			Doc. Nun	nber	Health,	Safety & Envi	ronmer	ntal Policy 4.00
Date: Sept. 23, 2003		Revision:	5	Revised by:	A. Felczak	Date:	Jan. 3, 2012	

- The client requires it. Workers arriving for orientation must have a valid CSTS wallet card in their possession.
- Subcontractors are to ensure that they have an adequate number of employees trained in First Aid to meet the requirements of the OH&S First Aid Regulations.
- The subcontractor's Site Supervisor must attend a pre-job meeting and physically inspect the work site.
- Subcontractors must submit a Hazard Analysis for their scope of work. (See Section 6 of this manual)

4.4 CONSTRUCTION CONTROLS

Subcontractors in the process of performing work under the control of Valard must meet the following requirements:

- All work will be performed in accordance to the subcontractor's safety manual. If the standards set out in the subcontractor's manual is exceeded by Valard's Health, Safety & Environmental Manual, our clients Safety Manual and/or Legislation, the higher standard must be adhered to. Subcontractors without a manual or without elements included in Valard's manual shall follow Valard's manual.
- Workers arriving on a Valard's Site must receive Valard's Site Specific Orientation as per Section 8 of this manual and any applicable client required orientations.
- Subcontractors will be responsible for monitoring the performance of their employees and subcontractors and taking corrective action when necessary. (See Section 3 of this manual)
- All subcontractor employees will participate in a morning Tailboard (pre-task meeting) Valard and its subcontractors will hold joint meetings whenever practical. (See section 6 of this manual)
- All site subcontractor employees will participate in a monthly safety meeting. (See Section 8 of this manual)
- All subcontractors will perform a bi-weekly safety inspection and submit it to Valard's Foreman or Safety Coordinator. (See Section 9 of this manual)
- Subcontractors shall ensure that their employees have adequate Personal Protective Equipment available to them (See Section 10 of this manual)
- Subcontractors are required to report all incidents and near misses to Valard's Foreman and the Vice President of Health, Safety & Environment.
- Valard and their Subcontractors shall investigate as a minimum:
 - 1. Lost Time Incidents
 - 2. Medical Aid Incidents
 - 3. Incidents resulting in Modified Work
 - 4. Incidents that had potential for serious injury or property damage
- Valard and their subcontractors will provide the investigation of incidents results to the client if required.
- Subcontractors are to ensure their employees are familiar with site emergency procedures. (Both Valard's and the owner/clients if applicable).

Docum	ent D	Description				Sub-Co	ontract	or Controls
Created By: A. Felczak			Doc. Nur	nber	Health,	Safety & Envi	ronmer	ntal Policy 4.00
Date: Sept. 23, 2		ot. 23, 2003	Revision:	5	Revised by:	A. Felczak	Date:	Jan. 3, 2012

- Valard may require a manpower roster within one hour of work commencing for the day for evacuation head count purposes.
- Subcontractors shall actively manage WCB claims and will provide Modified Work whenever possible.
- Subcontractors shall at all time maintain a substance abuse program equivalent while on the worksite as documented in the Construction Owners Association of Alberta Model. (See Section 16 of this manual). In cases where the client's Alcohol and Drug Policy differs from the Canadian Model then Valard will inform the subcontractor and will provide a copy of the client's Alcohol and Drug Policy and that this policy must be communicated to their employees and it must be adhered to while working on their worksite.
- Subcontractors shall maintain all of their tools and equipment as per manufactures specifications. All tools and equipment must be inspected at the start of the job and then on a monthly basis thereafter. The inspections must be recorded and forwarded to Valard's' Area Supervisor or Safety Advisor. All mobile equipment must be accompanied with a mechanic's report on its condition including a signed statement that all safety switches operate as per manufacturer's design. Cranes/lifting devices require a Boom certificate dated within the past 12 months and recertified if it is expired before continuing work.
- On the last working day of the month, subcontractors are to submit their statistics for themselves and their subcontractors to the Area Supervisor or Safety Coordinator. The statistics must include:
 - 1. Number of First Aid Incidents
 - 2. Number of Medical Aid Incidents
 - 3. Number of Lost Time Incidents
 - 4. Number of Near Miss Incidents
 - 5. Number of Property Damage Incidents
 - 6. Number of Environmental Incidents
 - 7. Total Man Hours Worked
- Subcontractors are to provide or develop any necessary safe work practices and procedures. The practices and procedures must be applicable to the project.
- Subcontractors will be evaluated for compliance after a maximum of 30 days on site using Valard's Subcontractor's Site Safety Audit Form #4.5.4.
- All subcontractors will be evaluated after the specific project is completed using the following information;
 - Monthly Health and Safety stat reports as required in Section 21 (monthly HS&E reports)
 - 2. Site Inspection reports
 - 3. Form 4.5.2 Subcontractor's pre-qual
 - 4. Form 4.5.3 Subcontractor's Pre-qual audit
 - 5. Form 4.5.4 Subcontractors site safety audit
- The following individuals are to be present during the projects subcontractors' evaluation meeting, Valard's Vice President of Health and Safety, Project Manager, site Superintendent, site Safety Advisor, Valard's person in charge of

4.5.1 SUBCONTRACTOR POLICY AGREEMENT FORM.

It is the policy of Valard Construction that all direct hire and subcontractor employees are entitled to work in a safe environment. To achieve this, every reasonable effort shall be to eliminate hazards and prevent incidents that cause injury to workers, environmental damage and property damage. This effort shall include controls applied both before awarding a subcontract and during the execution of the work.

Valard Construction believes that taking proper precautions can prevent incidents. It is the duty of every subcontractor, in the performance of their subcontract, to cooperate with Valard Construction and comply fully with Valard's Health, Safety & Environmental Manual and Provincial Health, Safety & Environmental Regulations.

I acknowledge and agree with the above policy and I will personally endeavour to ensure that the employees of my company comply with all of the above. I understand that non-compliance with these policies may result in the dismissal of individuals on site and/or the termination of my contract.

See attached project summary sheet for specific in	nformation on schedule performance
Description of the Work Performed:	
The ATCO Northeast Loop Program included the f 1. 240kV Tower Lines 2. 144kV Wood Pole Lines	following sub-projects:
3. Substations in Fort McMurray and the W	'abasca areas. The project itself started
approximately 20km southwest of the Fort McMu sections of a pipeline, a 260kV Steel Lattice T Refineries. The 127km right-of-way was primarily	urray Airport and ran 127km north paralleling ransmission Line and several Tar Sands Oil

by pipeline and logging companies. There were two river crossings involved.

The project was required to supply the load demands in the Fort McMurray region. As the Transmission Facilities Owner (TFO), ATCO Electric was required to construct 240kV double circuit transmission lines, 144kV transmission Lines and substations for the following sections:

- from the proposed Salt Creek substation to the proposed Black Fly substation
- from the proposed Black Fly substation to the proposed McClelland substation
- from the proposed Black Fly substation to the proposed Green Stocking substation
- from the proposed Salt Creek substation to connect to the existing 240-kV line

The substations included four (4) new greenfield 240kV substations and four (4) new greenfield 138kV substations near Fort McMurray, at the Husky Sunrise Plant and North of Fort McMurray. An additional substation required salvage to be completed. Our scope of work included full construction; installation of ground grid, above-ground grounding, steel erection, equipment erection, bus works, electrical control cable installation and termination.

The following substations were included in this project:

- 240kV Salt Creek Greenfield substation
- 240kV Livock Greenfield substation
- 240kV Green Stocking Greenfield substation
- 138kV Quigley Greenfield substation
- 138kV Germain Greenfield substation
- 138kV Kinosis Addition to existing substation

Salvage of the reactor and switches at the Ruth Lake substation was later added to the contract on an hourly rate basis.

See attached Project Summary Sheet for further information

NORTHEAST LOOP PROGRAM

Northeast Alberta / Fort McMurray & Wabasca Areas
November 2011 – Staggered Completion Dates Throughout 2012

Owner: ATCO Electric Contacts:

Orrin Perry e-mail <u>Orrin.Perry@atcoelectric.com</u> – substations Dean Kandt email: <u>dean.kandt@atcoelectric.com</u> – lines Reza Sharifi – 780 733 2685 - lines

The ATCO Northeast Loop Program included the following sub-projects:

- 1. 240kV Tower Lines
- 2. 144kV Wood Pole Lines
- 3. Substations in Fort McMurray and the Wabasca areas

The project itself started approximately 20km southwest of the Fort McMurray Airport and ran 127km north paralleling sections of a pipeline, a 260kV Steel Lattice Transmission Line and several Tar Sands Oil Refineries. The 127km right-of-way was primarily accessed via a radio-controlled road shared by pipeline and logging companies. There were two river crossings involved.

The project was required to supply the load demands in the Fort McMurray region. As the Transmission Facilities Owner (TFO), ATCO Electric was required to construct 240kV double circuit transmission lines,

144kV transmission Lines and substations for the following sections: (refer to the attached map)

- from the proposed Salt Creek substation to the proposed Black Fly substation
- from the proposed Black Fly substation to the proposed McClelland substation
- from the proposed Black Fly substation to the proposed Green Stocking substation
- from the proposed Salt Creek substation to connect to the existing 240-kV line

The substations included four (4) new greenfield 240kV substations and four (4) new greenfield 138kV substations near Fort McMurray, at the Husky Sunrise Plant and North of Fort McMurray. An additional substation required salvage to be completed.

Our scope of work included full construction; installation of ground grid, above-ground grounding, steel erection, equipment erection, bus works, electrical control cable installation and termination.

240kV Salt Creek Greenfield substation 240kV Livock Greenfield substation 240kV Green Stocking Greenfield substation Greenfield substation 138kV Quigley 138kV Germain Greenfield substation

138kV Kinosis Addition to existing substation

Salvage of the reactor and switches at the Ruth Lake substation was later added to the contract on an hourly rate basis.

The 240kV Transmission Line has 323 double circuit 240kV RC22 type steel lattice structures carrying two-bundle 795 kcmil ACSR "Drake" conductor in addition to one OPGW and one overhead shield wire. There were also several sections of 240kV H-Frame wood pole structures with two-bundle 477 kcmil ACSR "Hawk". The towers vary in height from 43meters to 58 meters and in weight from 13,700 Kg to 82,000 Kg. This section was split between 2 seasons; approximately 240 structures were completed from December 11, 2011 to April 5, 2012. Valard's scope of work including the assembly of all

towers, erection, stringing of conductor and wire, and commissioning.

28 Structures were also added to Valard's scope 83 Structures remain to be completed.

Three major crossings are involved in the project including two River Crossings over the Clearwater and Steepbank Rivers, and one hotline crossing over the 260kV Steel Lattice.

Two 144kV projects were also completed in two separate areas, South of Fort McMurray and in Cheecham, AB. Construction of approximately 5km's of new wood 144kV powerline from the new Salt Creek Substation to the existing Hangingstone Substation and 13km from Quigley Substation to Kinosis Substation.

The scope of work was for material delivery, pole setting, stringing and commissioning

Valard utilized 430 personnel on the project consisting of linemen, electricians, equipment operators, laborers, supervisors, safety personnel, administrative staff and management positions.

Accommodations were handled in self sustained camps located along the line route at various locations and in the existing oilsand's camps.

SCHEDULE PERFORMANCE

Substation November 31, 2011 – December 31, 2012

Schedule has been delayed for 240kV Livock Substation, 240kV Blackfly and

138kV McCellan Lake / shifted at the client's request

240kV Salt Creek Substation, 240kV Greenstocking, 138kV Quigley, 138kV

Germain, 138kV Kinosis Substations were completed on time.

240kV Transmission Line Dec 31, 2011 – March 31, 2012

Requested ISD was April 4, 2012

144kV Transmission Line

Quigley to Kinosis

Jan 3, 2012 - March 31, 2012

Requested completion date was March 9, 2012

The schedule was extended by 22 days at our request due to weather / time of

year

144kV Transmission Line

Feb 28, 2012 – March 29, 2012

Hangingstone to Salt Creek

Requested completion date was March 31, 2012

The project was completed on time with no extensions or delays

COST PERFORMANCE / BUDGET MANAGEMENT

Substations:

Value of Contract: \$17,200,000 Extra Claims: \$1,200,000

All change orders were initiated and requested by the client / ATCO Electric

240kV Transmission Line:

Value of Contract: \$65,000,000

\$4,400,000 for additional scope Extra Claims:

> All change orders were initiated and requested by the client / ATCO Electric. The majority of the change orders were for increased and additional scope of work items;

we were requested to perform work originally in another contractor's contract.

144kV Transmission Line

Quigley to Kinosis: Value of Contract: \$1,800,000

144kV Transmission Line

Hangingstone to Salt Creek: Value of Contract: \$800,000

Schedule:		
1. Date of Award: 2009		
 2. Date of Completion as specified in the Contract on the date of award: December 2012 3. Actual Date of Completion: April 2012 		
Description of the Work Performed:		
Construction of 175km of double circuit 500kV lattice steel tower line between the Bruce Nuclear plant and Milton, Ontario. Four-bundled 973kcmil ACSR conductor.		
Please see attached Project Summary sheet for more detailed information about the project.		

BRUCE x MILTON DOUBLE CIRCUIT 500kV TRANSMISSION LINE

2009 - 2012

Owner: Hydro One Networks Inc. Contact: Michael Power 416-345-1333

The Bruce to Milton Transmission Reinforcement Project included the construction of all above-ground facilities for a new double circuit 500kV lattice steel transmission line in Ontario.

The program was the largest expansion to Ontario's transmission system in 20 years. Valard Construction was selected by Hydro One to construct the new overhead transmission line from Bruce Nuclear Generating Station on the shores of Lake Huron to the Milton Substation in the Greater Toronto Area, Ontario. The new line was located largely on a widened existing transmission corridor

The scope of this critical project included:

- Assembly and erection of 720 steel lattice towers
- Stringing of 180 kilometers of new 500 kV double circuit conductor, 4 bundle 732 ACSR/TW (OHSW and OPGW)

Challenges ranged from land acquisition timelines that impacted construction schedules to crossing Highway 401 and several railroad tracks. The line also crossed near or through several environmentally sensitive areas, including four watersheds, rivers, the Saugeen Ojibway Nations Reserve and the Niagara Escarpment.

Valard Construction held Notice of Project and were the Constructor

SCHEDULE PERFORMANCE

Following initial mobilization in 2009, the project was delayed by the Owner / Hydro One for approximately one year.

Revised completion date was set for December 2012

A series of subsequent schedule advancements were requested by Hydro One and the project was successfully completed 7months (approximately 215 days) early.

Completion date = end April 2012

COST PERFORMANCE / BUDGET MANAGEMENT

The initial contract was awarded at \$271,000,000 The final value was \$143,359,448

There were eight (8) change orders on the project; all issued and initiated by the client / Hydro One. No change orders initiated by Valard

Description of the Work Performed:		
The Kearl Project consisted of a 240kV:72kV substation and approximately 39 km of 240kV transmission line, fiber optic and shield wire terminating at the Kearl Oil Sands main plant site. The transmission line contract involved right-of-way clearing, assembly and installation of 69 concrete foundations and steel monopoles ranging from 105′ – 180′. The remainder of the line consisted of 145 wood pole H-frame structures. The foundation component of the contract was EPC (Engineer, Procure and Construct).		
Please see attached detailed Project Sur	mmary sheet for more information on the project.	

KEARL OILSANDS PROGRAM

Fort McKay, Alberta August 2009 – December 2010

Owner: Imperial Oil Ventures Limited (IOVL) Contact: Mike Bilotta (Fluor) 403-537-4793 Contact: Wayne Duncan (IOVL) 403-969-6485

The Kearl Project consisted of a 240kV:72kV substation and approximately 39 km of 240kV transmission line, fiber optic and shield wire terminating at the Kearl Oil Sands main plant site.

The substation team mobilized in May 2010 and demobilized in keeping with the bid schedule of completion by December 18th, 2010. The substation construction involved installation of ground grid, all steel structure and gantry installations, transformer installation, 240kV and 72kV gas insulated switchgear (GIS), building installation, cable and fiber installations,

terminations and splicing, and some testing & commissioning.

The transmission line contract involved right-of-way clearing, assembly and installation of 69 concrete foundations and steel monopoles ranging from 105′ – 180′. The remainder of the line consisted of 145 wood pole H-frame structures.

The foundation component of the contract was EPC (Engineer, Procure and Construct).

The foundation utilized approximately 4,320 m³ of concrete while the transmission portion included some procurement and construction. The transmission line start date was August 2009 with final transmission construction ending mid-August 2009. Final commissioning and energization took place on December 18th, 2010.

SCHEDULE PERFORMANCE

The transmission line contract was extended approximately 180 days due to material availability.

COST PERFORMANCE / BUDGET MANAGEMENT

Substation:

The contract was delivered on a Cost-Plus basis.

The initial contract was awarded at \$6,109,019

The final value was \$12,467,812

There were no claims issued by Valard Construction; all change orders were initiated by the client.

There were approximately sixteen (16) change orders issued. Direct costs have been reimbursed; negotiations ongoing with respect to indirect charges.

Transmission Line:

The contract originated at \$31,451,824

The value was finalized at \$50,758,441

There were approximately 40 change orders items with the majority issues by Valard. Change Orders were issued for standard out of scope items and delays; all issues were amicably resolved.

Valard did not act as *Constructor* on this project

Description of the Work Performed:

Construction of foundations for substations and construction of 50km of 144kV transmission lines. The transmission line was constructed in swampy muskeg conditions for the entire line route.

The foundation portion of the project was to construct foundations for five (5) 240kV:144kV substations and three (3) 144kV transmission lines. Foundations included transformer pads as well as structure foundations. Transmission line foundations were constructed for the installation of steel monopoles. Foundation construction commenced in the spring of 2008 and was completed by January 2009. The largest foundation measured 9.5m x 13.5m with multiple pours.

The foundations were delivered under a Procure & Construct contract while the transmission was solely construction

SUNCOR FIREBAG

PHASE 3 – TRANSMISSION / SUBSTATION PROGRAM April 2008 – March 2010

Subcontract to Washington Group North Contact: Mike Buzan (780) 588-1714

This project was at the Suncor Firebag site and the client was Washington Group North.

SUBSTATION SCOPE OF WORK

The foundation portion of the project was to construct foundations for five (5) 240kV:144kV substations and three (3) 144kV transmission lines. Foundations included transformer pads as well as structure foundations. Transmission line foundations were constructed for the installation of steel monopoles. Foundation construction commenced in the spring of 2008 and was completed by January

2009. The largest foundation measured 9.5m x 13.5m with multiple pours.

The foundations were delivered under a Procure & Construct contract while the transmission was solely construction.

The photos depict transformer pad construction as well as bus structures and monopole foundations. Some foundations were constructed in the summer months in muskeg utilizing temporary road access.

SCHEDULE PERFORMANCE

The original contract award schedule spanned two years and was driven entirely by the Owner.

Valard mobilized and began construction within a timely manner however upon completion of foundation construction, Suncor placed the project on-hold for a period of approximately one year (365 days). Once the work was able to resume, transmission line construction was completed and the transmission line facilities were delivered within the agreed-upon timeline of three (3) months.

COST PERFORMANCE / BUDGET MANAGEMENT

Foundations:

The initial contract was awarded at \$11,600,000 The final value was \$11,351,516

Transmission Lines:

The initial award for the transmission contract was \$4,732,448 The final value was \$5,776,787

There were approximately 5 change orders on the project at the request of the client; none by Valard.

Valard did not act as *Constructor* on this project.

This project included 24	100 single pole structures, 3 river	crossings,

Valard was responsible for planning and scheduling, preliminary design, supplier and subcontractor selection, surveying and geotechnical, final design of transmission and substations, procurement, right-of-way clearing, construction, and commissioning. As part of the construction of the transmission line, Valard was responsible for providing camp accommodation for construction crews. Valard placed a full time Environmental Coordinator and Health and Safety Officer on the Project.

Please see the attached detailed Project Summary sheet for further details on the project

VICTOR MINE

Northern Ontario 2005 - 2008

Owner: DeBeers Canada Inc.

Contact: Tony Copland, Manager Engineering

905-829-5399 ext2351

This contract was an Engineer, Procure, and Construct project for a 115kV transmission line across northern Ontario from Otter Rapids to the De Beers Victor Mine Site on James Bay lowlands. The scope also included 3 115kV substations.

The project involved substantial logistical challenges; the entire line was built along the James Bay Coast with mobilization and support by rail, barge, and air. The project included dedicated CN-414 for expediting support and crew moves, as well as construction of public-use ice road linking isolated Northern communities to the Ontario highway system.

This project included 2400 single pole structures, 3 river crossings,

Valard was responsible for planning and scheduling, preliminary design, supplier and subcontractor selection, surveying and geotechnical, final design of transmission and substations, procurement, right-of-way clearing, construction, and commissioning. As part of the construction of the transmission line, Valard was responsible for providing camp accommodation for construction crews. Valard placed a full time Environmental Coordinator and Health and Safety Officer on the Project

SCHEDULE PERFORMANCE

Contract start date = 2005 Requested completion = 2007 Actual completion date = 2008

There was a schedule delay of approximately 365 days (one year) due to a road blockage by the First Nations community.

COST PERFORMANCE / BUDGET MANAGEMENT

The project was a lump sum contract initiated at \$88M

The final contract price was \$95M which included change orders for delays and other client-initiated changes.

Definitions

The following definitions shall be used in the interpretation of this manual and all referenced subdocuments:

- **Client** Any entity with which Valard Construction Ltd. holds a contract for the provision of products and/or services.
- Constructed Works The structures, devices and/or installations specified for construction in the scope of a Contract.
- **Contract** Governing agreement between the Client and Valard Construction Ltd. for the provision of services associated with a Project.
- **Directive** Instruction to responsible parties.
- **Distribution Register** Register maintained by the Quality Program Documents Administrator listing all recipients of controlled copies of the Quality Manual.
- Document See 'Quality Program Document'.
- **Engineer** To be interpreted as per the definition provided by the Engineering Professional Association in the jurisdiction where a product or service is provided, completed, purchased, negotiated or constructed.
- **Engineering Services** Any services governed by an Engineering Professional Association in the jurisdiction where a product or service is provided, completed, purchased, negotiated or constructed.
- Engineering Consultant Individual or entity subcontracted to provide Engineering Services to Valard Construction Ltd.
- Form Quality Program Document provided for the purpose of gathering data.
- Hold Point Juncture in a work Process at which work must not be continued until the specified inspections and/or signoffs are completed.
- **ITP** Inspection and Test Plan
- Operational Controls Documentation and devices employed in the assurance of Quality at the construction stage of a Project.
- Originator Individual assigned the responsibility of establishing a Quality Program Document.
- Owner Individual assigned the responsibility of revising a Quality Program Document.
- **Procedure** Quality Program Document consisting of a verbal narrative of the manner in which a task is to be completed.
- **Program** See 'Quality Program'.

0 Introduction

0.1 Goals of the Project Quality Plan

The stated goal of this Project Quality Plan is to establish a framework for the control and assurance of the Quality of (a) work completed by the Subcontractor, (b) materials supplied by Valard Construction, and (c) materials supplied by the client. This Preliminary Project Quality Plan is preliminary and has been composed for the purpose of proposing an implementation strategy for the Subcontractor's responsibilities on The 240 kV Transmission Line; this strategy has also been composed for the purpose of identifying the subcontractor's ability to conform to clients's Inspection and Testing Plan. The client is invited to review this PQP for the purpose of identifying any discrepancies or inconsistencies, following which the PQP will be revised to better reflect the requirements of the Contract.

0.2 Form of Project Quality Plan

This document is divided into four primary sections:

- Management & Administration: In addition to providing an overview of the proposed project management structure, this section will summarize the role assignments and assumed responsibilities associated with each role.
- Records: This section will overview the manner in which records will be gathered, preserved, and distributed over the course of project completion.
- 3) Materials: This section will summarize all materials to be supplied by the by the Prime Contractor and/or the Subcontractor under the terms of the Contract; it will also specify the proposed methods of Quality Control associated with each material category.
- 4) General Work Activities: This section will examine Quality Control over broad topics affecting several or all work activities (i.e. supervision, certifications, etc.)
- 5) Specific Work Activities: This section will specifically address the work activities for The 240 kV Transmission Line

Page 8 of 80

1 Management & Administration

1.1 Project Management Structure

The general form of the Project management structure (as it pertains to Quality) is illustrated below:

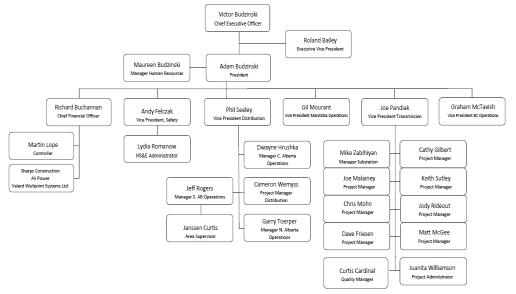

Fig. 01 Project Management Structure Diagram

The primary observable features of this structure are as follows:

- The Quality Manager answers directly to the President.
- Quality Coordinators report to the Quality Manager.
- Trade Supervisors and Project Coordinators are monitored by Quality Coordinators on behalf of the Quality Manager.

1.2 Role Assignments

The following chart will be completed to summarize some of the key personnel to be employed in the completion of the Project. Only personnel having responsibilities specified in the PQP are to be listed. The names of those personnel having key managerial roles are presently listed for the purpose of proposal.

CIMF	MFP Exhibit P-01886			Page 309	
Valard A QUANTA SERVICES COMPANY				Quality Program

Project					
Manager					
Quality					
Manager					
Lead Quality					
Coordinator					
Quality					
Coordinator					
	(Several				
Supervisor	Assigned)				

1.3 Qualifications

All personnel employed in the administration of the Project Quality Plan shall possess the necessary skills and be qualified for the completion of their assigned responsibilities.

1.4 Responsibilities

It should be observed that the following responsibility summaries are not exhaustive, and describe the responsibilities associated with the roles in question only as they relate to the Project Quality Plan.

1.4.1 Responsibilities of the President

The responsibilities of the President as they relate to Quality are as described under heading 1.2.1 of the Quality Manual.

1.4.2 Responsibilities of the Project Manager

The responsibilities of the Project Manager are as follows:

- To ensure that supervisors and trade foremen are of adequate training and/or experience to complete the production-related tasks assigned to them
- To enforce the authority of the Quality Manager and appointed project Quality Coordinators
- To address the concerns of the client with respect to Quality issues
- To ensure that supervisors and trade foremen are completing their responsibilities in accordance with the Project Quality Plan

1.4.3 Responsibilities of the Quality Manager

The responsibilities of the Quality Manager as they relate to Quality are as described under heading 1.2.2 of the Quality Manual.

1.4.4 Responsibilities – Project Coordinators

The responsibilities of Project Coordinators with regard to a given Project Quality Plan are as follows:

- Project Coordinators shall accept the delegation of any of the Project Manager's responsibilities at the written request of the Project Manager.
- Project Coordinators shall work with subcontractor personnel at the planning stage to ensure they are informed of any and all Quality requirements of the Project as they relate to the subcontractor's work.
- Project Coordinators shall enforce the authority of the Quality Coordinator with respect to the administration of the Project Quality Plan

1.4.5 Responsibilities – Quality Coordinators

The responsibilities of Quality Coordinators are as follows:

- The Quality Coordinator shall prepare the Project Quality Plan in accordance with the Quality Manual.
- The Quality Coordinator shall interface with the Project Manager to collect any required information for the completion of the Quality Plan.
- The Quality Coordinator shall interface with trade supervisors and foremen to collect any required information for the completion of the Quality Plan.
- The Quality Coordinator shall interface with subcontractor trade supervisors and foremen to collect any required information for the completion of the Quality Plan.
- The Quality Coordinator shall be responsible for review of the Quality Plan to ensure that all items listed in the 'Controls' columns of the Quality Plan components listed under heading 3.1 are further referenced in the plan narrative. In the event that these items are not referenced in the narrative, the Quality Coordinator shall request a review of the Quality Manual and Project Quality Plan template to satisfy the requirements of the Project.
- The Quality Coordinator shall submit the Project Quality Plan to the Client in accordance with the requirements of the Contract, or in accordance with any further agreements made with the Client.
- The Quality Coordinator shall collect all required documentation associated with the purchase of materials and products for the Project from employees charged with receiving such materials and products; this work is completed for inclusion in the Quality Record.
- The Quality Coordinator shall collect inspection forms and reports generated at the time of installation from foremen and trades people for the purpose of inclusion in the completed Quality Record.
- The Quality Coordinator shall compile all relevant Quality documentation for inclusion in the completed Quality Record.
- At project kick-off, the Quality Coordinator shall be responsible for explaining the Quality-related responsibilities of all trade-level employees and subcontractors (Supervisors, Foremen, Trades people, and Labourers) – as well as specifying his/her own role – to the project Foremen and Supervisors.

Page 12 of 80

 The Quality Coordinator shall perform periodic audits for the purpose of confirming that all personnel are completing their work in accordance with the PQP.

1.4.6 Responsibilities – Engineering Manager

(Omitted)

1.4.7 Responsibilities – Design Lead

(Omitted)

1.4.8 Responsibilities – Design Engineers

(Omitted)

1.4.9 Responsibilities – Supervisors

The responsibilities assigned to Supervisors are as follows (responsibilities are common for both employed and subcontract supervisors):

- The Supervisor shall ensure that all trade-level employees are in possession of sufficient training and experience to complete their assigned tasks.
- The Supervisor shall enforce the authority of the Quality Coordinator as it relates to the direction of the completion and collection of Quality-related documents.
- The Supervisor shall ensure that trades people are supplied with those resources required to complete their work in accordance with the design requirements of the project, as well those required to observe and collect data pertaining to the Quality of the works constructed.

Page 13 of 80

1.4.10 Responsibilities – Foremen

The responsibilities assigned to foremen are as follows:

- The Foreman shall supervise the completion of work to ensure that it is completed in accordance with the requirements of the Project design drawings.
- The Foreman shall ensure that works constructed are built only in observance of drawings marked 'Issued for Construction.'
- The Foreman shall ensure that records of works installed are completed by those individuals completing the work, and that such records are completed at the time of installation or assembly.
- Where required by Installation Records, the Foreman shall perform a secondary inspection of works completed and sign for such inspection.
- The Foreman shall direct trades people and labourers working under their supervision as to their Quality-related responsibilities in accordance with this document.

1.4.11 Responsibilities – Trades people (Not specified in management structure)

Trades people shall complete all Quality Records specified by the Project Quality Plan and associated with their work at the time of installation, assembly, or testing, as the case in particular requires.

1.4.12 Responsibilities - Labourers (Not specified in management structure)

Labourers shall complete all Quality Records specified by the Project Quality Plan and associated with their work at the time of installation, assembly, or testing, as the case in particular requires.

Page 14 of 80

CIMFF	P Exhibit P-	01886		Page 314

Project Quality Plan:		Originato	or:	Approved:	

2 Quality Record

'Quality Record' refers to the complete body of Quality-related documentation collected over the course of project completion. This section provides a narrative of the manner in which the constituent documents will be collected, preserved and distributed.

2.1 Valard Construction's Inspection and Test Plan

Valard Construction will generate a complete Inspection and Test Plan (ITP). The Quality Record consists essentially of the body of documentation described in the ITP.

Regarding all forms associated with the Quality Record and/or the ITP, Valard proposes, the following measures should be taken to expedite the collection, and distribution of Quality related documentation:

- All forms should be revised to ensure that they can be presented in their entirety on a single page (can be accomplished through the use of smaller fonts and/or legal-sized documents).
- All forms should be printed and made available in triplicate carbon paper form; alternately, Valard Construction will make electronic copies of the Forms specified in the ITP available for the purpose of its advance preparation of site-specific Quality Forms.

All ITP's shall be submitted for acceptance by the client and if required by the client, prior to any work commencing. ITP's shall be submitted at least 7 (seven) days prior to the proposed work commencement date, to allow for review and input from all parties.

2.2 Reporting Summary

Valard will generate a Reporting Summary consisting of a complete list of all completed and/or partially completed forms to be submitted to the Prime Contractor over the course of the Project. These forms shall be available, at all times, for review by the Prime Contractor's Quality assurance staff. Explicitly, this Summary shall consist of the following:

- A summary of all Quality Related Forms to be collected in relation to material receiving and inspection;
- A summary of all Quality Related Forms to be collected for each individual structure (inclusive of foundation) to be installed in awarded sections

In addition, the summary of structure-related Quality forms will also account for and reference secondary Quality forms such as concrete delivery tickets, third party concrete strength testing reports, laboratory sieve test results, and any other documentation.

 A summary of all Quality Forms relating to conductor and hardware installation.

2.2.1 Subcontractor Generated Quality Forms

In all cases, where the PQP specifies a Form, the Forms shall be generated in accordance with the requirements of the PQP. Each type of Form will be assigned a document number, in addition to a system of serial numbers whereby the Forms can be traced.

Subcontractor Quality Forms may be generated for the internal purposes of the Subcontractor with respect to Quality or may be generated for the purpose of satisfying elements of the specification that relate to Quality.

2.2.2 The Quality Record

'Quality Record' describes the complete set of Quality-related documentation that will be:

- 1. Assembled by the Subcontractor for the purpose of satisfying its internal requirements with respect to Quality.
- 2. Submitted to the Prime Contractor for the purpose of documenting the Quality of works constructed in association with the Contract.

The Reporting Summary represents a table of contents for the Quality Record. The expectation is that at Project completion, all Forms outlined in the Reporting Summary will be present in the Quality Record.

In addition to those elements specified in the reporting summary, the Quality Record will include documentation of other elements of the Quality Program (i.e. Nonconformity Reports, Audit Documentation Forms, etc.); these elements are referenced throughout the PQP, and will be compiled at the time of generation of the Reporting Summary.

2.2.3 Completeness of Record

The completed Reporting Summary shall form a benchmark for the performance of the Subcontractor with respect to Quality over the course of the Project. A complete Quality Record corresponding exactly to the Reporting Summary (along with any amendments thereto made over the course of the Project) shall be deemed to accurately represent the Quality of all works constructed by the Subcontractor.

2.3 Procedures for the Completion of Quality Documentation

This section shall establish procedures for the completion of each type of Quality Form listed in Valard's ITP, in addition to Quality Documentation deemed to be necessary by the Subcontractor and completed in addition to the requirements of the ITP. These procedures consist of a crossfunctional procedural flowchart for each Quality form, along with a short narrative. The Procedures are divided into the same groups of forms described under Section 2.2 of this document.

It should be noted that for all forms - where the form has been completed and indicated for inclusion in the Quality Record - it is the

Page 17 of 80

CIMF	P Exhibit P-	01886		Page 31

Project Quality Plan:		Originato	or.	Approved:

Subcontractor's preference that it first be submitted to the Subcontractor's Project office for the purpose of copying and filing prior to submission to the Prime Contractor.

2.3.1 Forms Pertaining to Material Receiving and Inspection

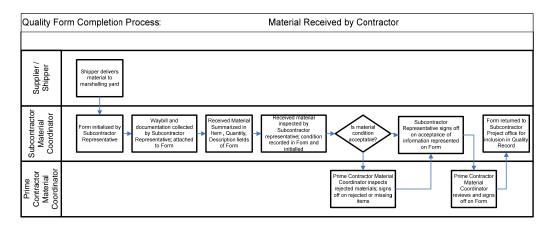

In general the following will apply for Quality forms pertaining to material receiving and inspection:

- Quality forms pertaining to borrow pits and earthworks materials will be initialized by the Project Manager and/or Project Coordinators at Project startup or as required over the course of the project. Borrow pit documentation will be preserved in the Project office and associated with the geographic location of the pit for the purpose of efficient access to earthworks materials.
- Quality Forms pertaining to purchased materials and products will be initialized by the Subcontractor Materials Coordinator at the time of receiving.
- 3. In all places where a Form indicates that a Subcontractor representative will notify the Prime Contractor of its intention to begin work on the right-of-way or at a structure location, it is implicit that such notice will be accomplished via the Subcontractor's schedule updates and daily verbal amendments thereto. In general, it is expected that the Prime Contractor's representatives will be working closely with the Subcontractor's Supervisors and construction Foremen, and as such will be familiar with its construction schedule. With the exception of direct requirements thereof found in the Contract, written notice specifying the completion or inspection of work at a particular location will not be provided. Submission of schedule updates on a regular basis will be deemed to be acceptable notice of the imminence of construction activities at any given location.

Page 18 of 80

2.3.1.1 Materials Received by Contractor

The following diagram illustrates the flow of information related to the completion of Materials Received by Contractor form:

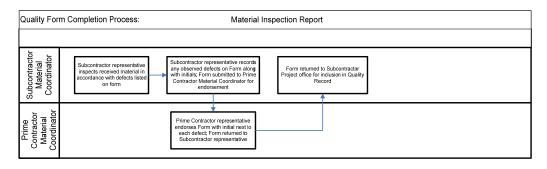

Process notes:

- Documentation collected by Sub-contractor's representative will include: mill test reports and bills of lading.
- In the event that the received condition of material is unacceptable, details of the reason for rejection of the material will be recorded in the available space on the form.
- Where the material or quantity thereof is inconsistent with the waybill, this condition will trigger the generation of a Vendor Shortage List.
- Process notes shall include welding examination and inspections for all welding completed by any supplier.
- All materials received from any supplier must be accompanied by welding reports and welding inspections substantiated quality of materials and workmanship.

2.3.1.2 Materials Inspection Report

The following diagram illustrates the flow of information related to the completion of Materials Inspection form:

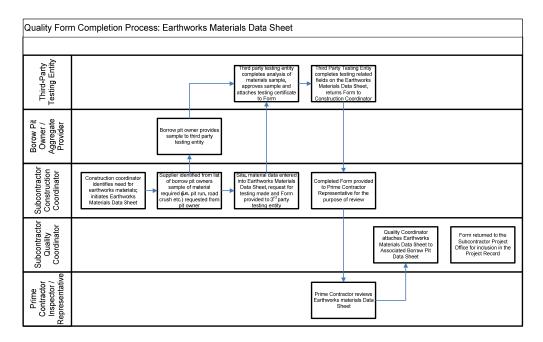

Process notes:

- Documentation collected by Subcontractor representative will include all defects, not just limited to defects specified on the Form.
- Sign established at pit will feature the following information:
 - Subcontractor name and logo
 - Contract tag and number
 - Borrow Pit Data Sheet document number
- Ultimately, as various materials are identified and approved at the borrow pit site, the associated Earthworks Materials Data Sheets will be attached to the Borrow Pit Data Sheet and made available in the Project Office.

2.3.1.3 Earthworks Material Data Sheet

The following diagram illustrates the flow of information related to the completion of the Earthworks Material Data Sheet:

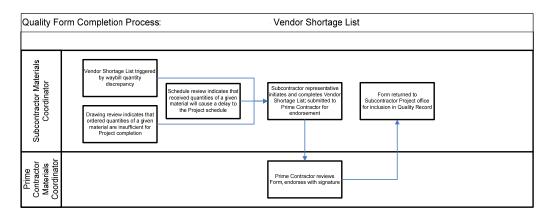

Process notes:

 As specified above, Earthworks Material Data Sheets will be attached to their respective Borrow Pit Data sheet, ultimately creating a record both of a site, as well as the properties of materials available at that site.

2.3.1.4 Vendor Shortage List

The following diagram illustrates the flow of information related to the completion of Vendor Shortage form:

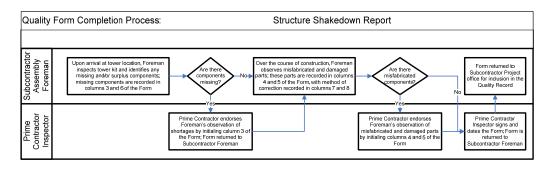

Process notes:

 Process assumes availability of Prime Contractor Representative for inspection of material and acceptance of Vendor Shortage Lists.

2.3.1.5 Structure Shakedown Report

The following diagram illustrates the flow of information related to the completion of Structure Shakedown form:

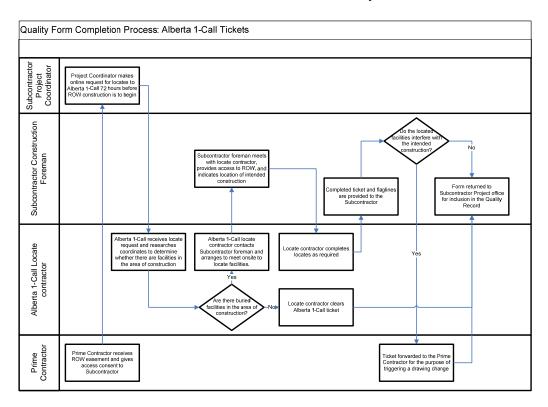

Process notes:

- Dependent upon the nature of the tower kit packaging, it may be beneficial to complete the initial survey for missing parts at the marshalling yard prior to delivery of the kit to the tower site.
- Observations of mis-fabrications are by necessity carried out over the course of construction; this is a result of the fact that many defects will be difficult or impossible to observe without actually attempting to assemble the tower.

2.3.2 Forms Pertaining to Structure Erection (Foundations)

2.3.2.1 Alberta 1-Call Tickets

Although the 1-Call Ticket is not a required element of the Prime Contractor's ITP, it will be included with the Quality Record.

Process notes:

 In the event that it has been determined that located facilities interfere with the installation of a tower foundation, construction

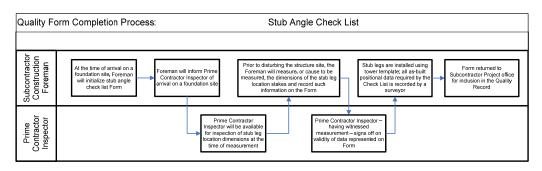

CIMFP Exhibit P-		01886	1	Page 32	23
Valard A QUANTA SERVICES COMPANY				Quality Program

Valard A QUANTA SERVICES COMPANY				Quality Program	
Document Number: VCLP-02-7000-0-00	Revision N 1	umber:	Last Reviewe	ed:	
Project Quality Plan:		Originato	or:	Approved:	

2.3.2.4 Foundation Report for Structure

The following diagram illustrates the flow of information related to the completion of Foundation Report for Structure form:

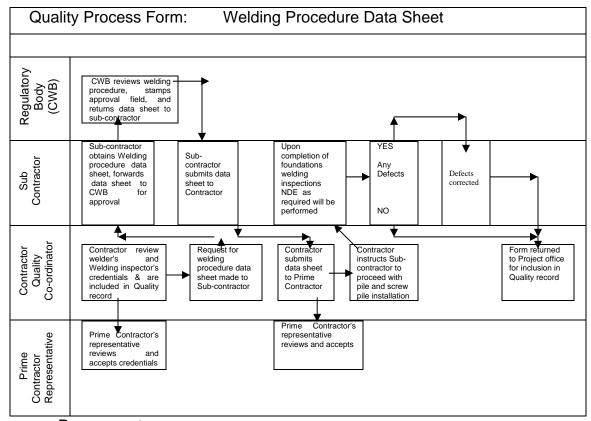

Process notes:

None

2.3.2.5 Welding Procedure Data Sheet

Page 26 of 80

The following diagram illustrates the flow of information related to the completion of the Welding Procedure Data Sheet:

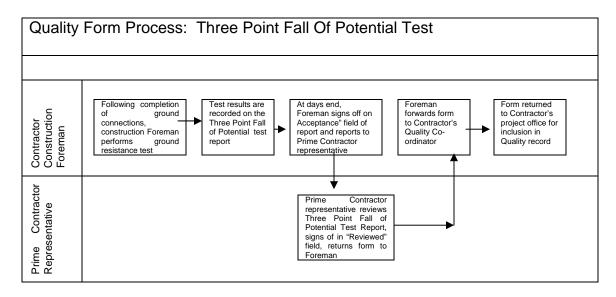

Process notes:

Following completion of the Welding Procedure Data Sheet, it will be made readily available in the Project office

Page 326

2.3.2.6 Three Point Fall of Potential Test Report

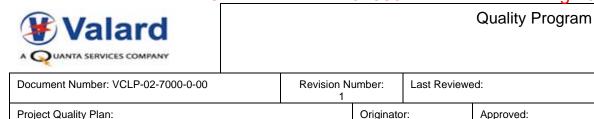

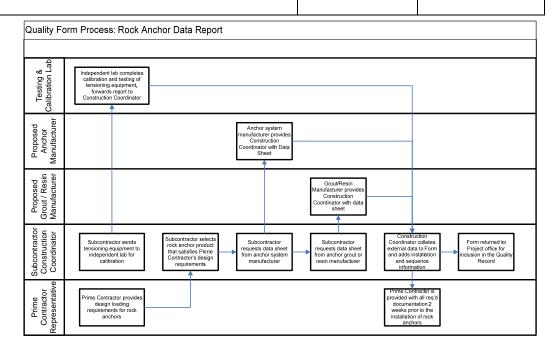

Process notes:

- Forms are to be completed and submitted on a daily basis.
- It is assumed that the Prime Contractor Representative will be available to provide supervision or spot-checks of testing process throughout the day for the purpose of confirming the validity of test results prior to signing the 'Reviewed field of the Form.

2.3.2.7 Rock Anchor Data Report

The following diagram illustrates the flow of information related to the completion of the Rock Anchor Data Report:

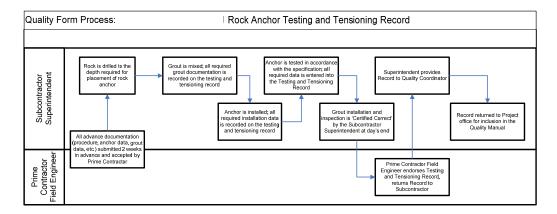

Process notes:

- Data report will consist essentially of a checklist indicating each piece of external documentation to be collected; these are to be collated to the report sheet when they are collected.
- Following submission of Rock Anchor Data Reports, they will be made available in the Project office for reference and/or inclusion subsequent Daily Rock Anchor Testing and Tensioning Reports.

2.3.2.8 Subcontractor's Daily Rock Anchor Testing and Tensioning Report

The following diagram illustrates the flow of information related to the completion of Rock Anchor form:

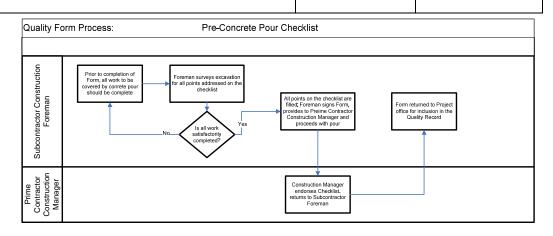

Process notes:

 ITP calls for only for testing of one anchor per day or every tenth anchor. The procedure outlined above applies only to those anchors specified for testing.

2.3.2.9 Pre-Concrete Pour Checklist

The following diagram illustrates the flow of information related to the completion of Pre-Concrete Pour Checklist form:

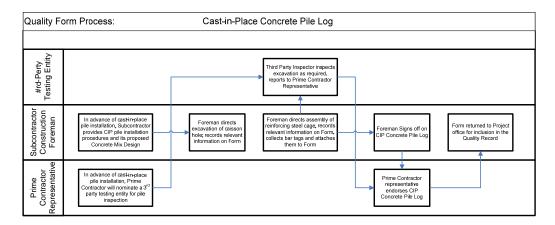

Process notes:

 All checklist points are to be evaluated in accordance with the specification.

2.3.2.10 Cast-in Place Concrete Pile Log

The following diagram illustrates the flow of information related to the completion of Cast-in-Place Concrete Pile form:

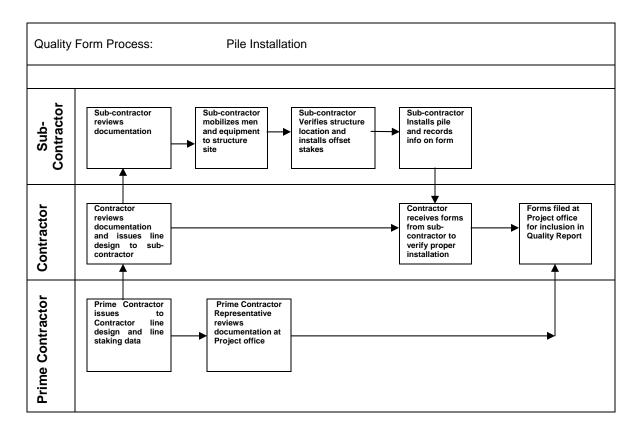

Process notes:

- 'Reinforcing Steel' field should be used to indicate the placement drawing number; bar tags taken from the reinforcing steel at the time of placement should be collected.
- Cast-in-place pile installation procedures will be provided to the Prime Contractor Two weeks in advance of installation of the first pile installed on the Project; this shall be deemed to be acceptable documentation of procedures for the entirety of CIP piles installed on the Project.
- It is expected that the Prime Contractor will nominate a single 3rd party testing entity at Project kick-off, and that this group will be available for efficient inspection of excavations as they come available.

2.3.2.11 Pile Installation

The following diagram illustrates the flow of information related to the completion of Cast-in-Place Concrete Pile form:

Process notes:

none

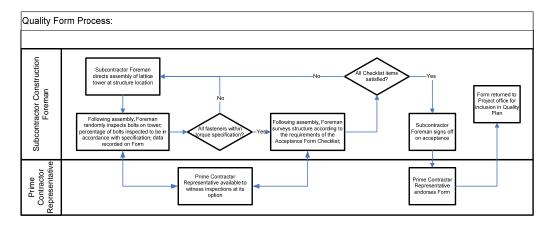

2.3.3 Forms Pertaining to Structure Erection

2.3.3.1 Structure Shake Down Report

• Note: The process associated with Structure Shakedown Report is included under Heading 2.3.1.5.

2.3.3.2 Tower Assembly Acceptance

The following diagram illustrates the flow of information related to the completion of Tower Assembly form:

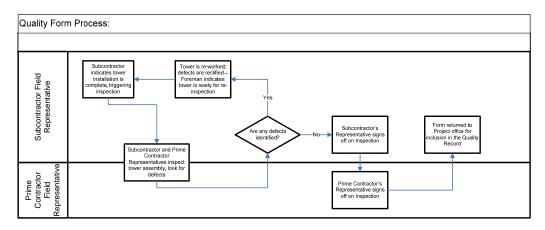

Process notes:

• (None)

2.3.3.3 Structure Assembly and Installation Inspection Report

The following diagram illustrates the flow of information related to the completion of Structure Assembly and Installation Inspection form:

Process notes:

 For the purpose of efficiency, the Subcontractor prefers that inspections should be completed immediately following tower erection.

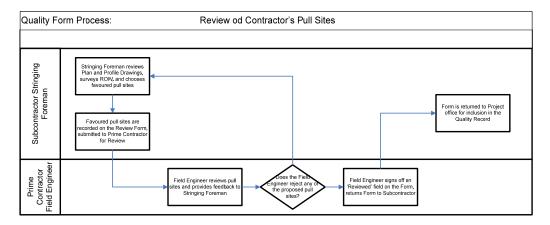

2.3.4 Forms Pertaining to Access and ROW issues

Note that in addition to the Form specified below, general ROW cleanup and conditioning is referenced in Tower Assembly Acceptance Form.

2.3.5 Forms Pertaining to Conductor Installation

2.3.5.1 Review of Contractor's Pull Sites

The following diagram illustrates the flow of information related to the completion of Pull Sites form:

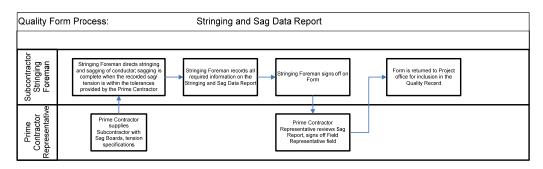

Process notes:

- It is expected that reviews of pull sites may be submitted and reviewed for discrete sections of line; this will be necessary for efficient execution of stringing work.
- Typically, pull sites will be chosen for the suitability of the ground and geography with respect to anchoring, accessibility for heavy stringing equipment, and to minimize wasted conductor.

2.3.5.2 Stringing and Sag Data Report

The following diagram illustrates the flow of information related to the completion of Stringing and Sag Data form:

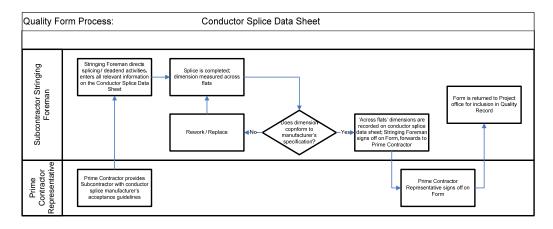

Process notes:

• (None)

2.3.5.3 Conductor Splice Data Sheet

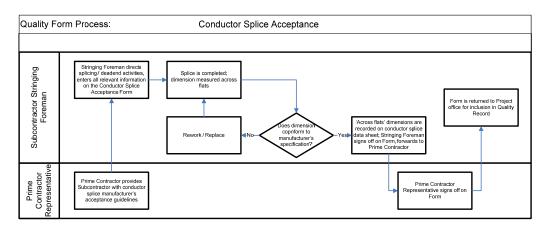

The following diagram illustrates the flow of information related to the completion of form:

Project Quality Plan:		Originato	or:	Approved:	

2.3.5.5 Final Phase III Acceptance

The following diagram illustrates the flow of information related to the completion of form:

Process notes:

• (None)

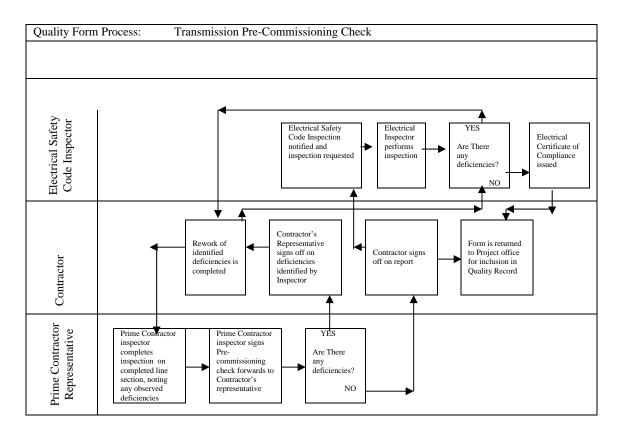

2.3.6 Forms Pertaining to Final Inspection and Commissioning

2.3.6.1 Ground Clearance Report

Note: This Form and the associated inspection will be completed by Valard Construction. These Forms will be submitted to the Prime Contractor for inclusion in the Quality Record.

2.3.6.2 Transmission Pre-Commissioning Check

The following diagram illustrates the flow of information related to the completion of Pre-Commission Check form:

Process notes:

CIMFI	P Exhibit P-	01886	I	Page 3	40

2.3.6.3 Patrol Worksheet

The following diagram illustrates the flow of information related to the completion of Patrol Worksheet form:

Process notes:

• (None)

2.4 Collection of Quality Documentation

In all cases the collection of forms and additional documentation will proceed as follows:

- 1. The Form will be initialized by the Foreman, Supervisor, or coordinator directing the work.
- 2. All qualitative Form fields (i.e. checklist-style documentation) will be completed:
 - a. In the field
 - b. At the time of work completion
 - c. By the tradesperson completing or directly supervising the work
- 3. All quantitative Form fields will be completed:
 - a. In the field
 - b. At the time of work completion
 - c. By the Foreman or Supervisor directing the work
 - d. Only by Foreman or Supervisor having personally performed the measurements represented or having directly observed the measuring process.
 - e. Documentation will be presented to the Prime Contractor's representative for review and/or endorsement (as required by the Prime Contractor's ITP) following which it is to be returned to the Foreman or Supervisor responsible for the work.
 - f. The Foreman or Supervisor will submit the Quality Form to the designated Quality Coordinator; the Quality Coordinator will be responsible for control and distribution of Quality Documentation.
 - 4. All documentation shall be maintained by Valard Construction in a proper filing system. The Prime Contractor's Quality Staff shall be granted access to these files for the purpose of review.

2.5 Control of Quality Documentation

The Quality Record shall be collected and maintained in the Subcontractor's Project office. The following process will apply to its control:

- 1. Upon submission of a Quality document, it will be listed as complete in the Reporting Summary.
- 2. The Form will be stored in hardcopy at the Subcontractor's Project office.
- 3. The Form will be scanned and stored electronically on the Subcontractor's remote server.

2.6 Distribution of Quality Documentation

The following process is proposed to satisfy all elements of the Quality Plan:

- e. All original documents shall be maintained by Valard Construction and shall be included in the turn over of documents at project completion.
- g. The form will be copied in triplicate.
- h. One copy of the Form will be entered into the Quality Record.
- One copy of the Form will be forwarded to the Project Manager or a designated coordinator for the purpose of tracking progress.

3 Materials

Quality control with respect to materials is to be administered under two primary headings:

- 1. Materials Supplied by the Prime Contractor
- 2. Materials Supplied by the Subcontractor

3.1 Materials Supplied by the Prime Contractor

With respect to materials supplied by the Prime Contractor, the goals of the PQP are as follows:

- 1. To confirm the quantity and condition of material received from the Prime Contractor's suppliers
- 2. To confirm the conformity of received material to its type design
- 3. To quantitatively record deviations of the lattice tower materials from their type design for the purpose of calculating changes to the Contract

To the end of achieving the above, the following controls are to be implemented:

- 1. Visual Inspections
- 2. Quantity Checks
- 3. Vendor Shortage Reporting
- 4. Nonconforming Material Quarantine

3.1.1 Visual Inspections

Visual inspections will be conducted on all material received by the Subcontractor on behalf of the Prime Contractor at the time of receiving in the marshalling yard.

Visual inspections will be documented and will be subject to review and confirmation by the Prime Contractor's Materials Coordinator.

3.1.2 Quantity Checks

Quantity checks will be documented and will be subject to review and confirmation by the Prime Contractor's Materials Coordinator.

CIME	P EXHIBIT P-	טססונ		Page 3	ŧ
Valard A QUANTA SERVICES COMPANY				Quality Program	
Document Number: VCLP-02-7000-0-00	Revision Nu	ımber:	Last Reviewe	ed:	
Project Quality Plan:		Originato	or:	Approved:	

IMED EVERIBLE D 04006

Shortages that become apparent as a result of quantity checks will trigger the generation of a Vendor Shortage List (see following section).

Quantity checks specifically addressing component checks for missing and misfabricated components of the steel lattice tower kits will be documented.

3.1.3 Vendor Shortage Reporting

Vendor shortages will be documented.

3.1.4 Quarantine

Upon taking possession of the respective marshalling yard, the Contractor will identify an area of the yard to be reserved for quarantined parts. This area will be clearly marked and segregated from the remainder of the yard by ropes or tape.

Upon identification of substandard, damaged, or broken parts or components, such components shall be clearly marked with a tag bearing the following information:

- Large bold notice: NONCONFORMING PART
- Discrepancy: Description of the identified problem with the part
- Supplier: Name of supplier
- Date: Date nonconformity was identified
- Initial: Initial of individual taking part out of circulation

Once parts have been deposited in the Quarantine area, tags will not be necessary.

Valard A QUANTA SERVICES COMPANY				Quality Program
Document Number: VCLP-02-7000-0-00	Revision No	umber:	Last Reviewe	ed:
Project Quality Plan:		Originato	or:	Approved:

3.2 Materials Supplied by the Subcontractor

With respect to materials supplied by the Subcontractor, the goals of the PQP are as follows:

- 1. To document the properties of received material for the internal requirements of the Subcontractor.
- 2. To document the properties of received material to assure the Prime Contractor of the Quality of such Material.

While the following Subcontractor-supplied materials are referenced in the ITP, no forms have been provided. As such, the Subcontractor will generate forms for the efficient tracking of these materials (Note: these forms are also referenced under headings 2.2 and 2.3):

- Borrow Pit documentation
- Road Crush
- Pit Run
- Sand
- Native Fill
- Concrete
- Reinforcing Steel
- Rock Anchors
- Grout

The information to be addressed in each of these forms is summarized in the table on the following page.

CIMFP	Exhibit P-	01886		Page 34	ł
Valard A QUANTA SERVICES COMPANY				Quality Program	
Document Number: VCLP-02-7000-0-00	Revision No	umber:	Last Reviewe	ed:	
Project Quality Plan:		Originato	r:	Approved:	

The following chart summarizes all Subcontractor supplied materials as specified in the Contract, along with proposed Quality controls:

Subcontractor Supplied Material	Product Controls	Submission Schedule	Comments
Earthwork Materials - Borrow Pits (General)	Borrow pit information to be submitted to Prime Contractor prior to provision of earthwork materials: -Address or coordinates of borrow pits -Summary of methods of excavation, mixing, screening, and transportation -Summary of the rated capacities of equipment used for borrow pit excavation and process -Summary of unusual mixing or excavating procedures -Summary of methods in use to control moisture and drainage -Information on disposition of oversized material -Information on the disposition of unsuitable material from stripping operations Information qualifying 'road crush' as conformant to Alberta Transportation	Prior to use of borrow pit	Comments
Road Crush	Information qualifying Toac crush as conformant to Alberta Transportation Designation 4, Class 20: -Sieve analysis -Maximum density curve -Optimum Moisture curve	2 weeks prior to the commencement of material placement	
Pit Run	Information qualifying 'pit run' as conformant to Alberta Transportation Designation 6, Class 80: -Sieve analysis -Maximum density curve -Optimum Moisture curve	2 weeks prior to the commencement of material placement	
Sand	Information qualifying sand as conformant to SP-062200-4100-01 7.2.4: -Sieve analysis -Maximum density curve -Optimum Moisture curve	2 weeks prior to the commencement of material placement	
Native Fill	-Maximum density curve -Optimum Moisture curve	2 weeks prior to the commencement of material placement	
	-Concrete mix design, formulated in accordance with the requirements of the design drawing	2 weeks prior to the commencement of material placement	
Concrete	-Concrete Delivery Tickets conforming to CSA A23.1 Section 5.2.4.5	Immediately following placement	
	Information gathered by third-party testing contractor: -Slump test results -Air content test results -Ambient temperature at time of delivery -Compressive strength test results	Immediately following availability of results

3.3 Audits

This section addresses only those audits associated Quality Assurance and Control for material.

3.3.1 General

Field-level audits will be instituted for the purpose of ensuring that Quality Assurance and Control measures are being implemented in accordance with the PQP. It is intended that an audit will be completed in approximately one day.

3.3.2 Procedure

The Subcontractor will compose a complete procedure for the completion of field-level audits. This procedure will implement the following elements:

- 1. Audits will include spot checks on documentation of new material arriving in the marshalling yard.
- 2. Audits will include an inspection of the measures used to identify the 'Quarantine' area of the marshalling yard.
- 3. Audits will include a review of collected borrow pit documentation.
- 4. Audits will include an observation of the received material inspection procedure.
- 5. Audits will include an inspection of reinforcement steel stored at the marshalling yard.
- 6. Audits will include a review of earthworks materials being installed at a structure location, complete with an inspection of the associated documentation.
- 7. The audit procedure will include a Form to be used for the purpose of documentation of the audit (referenced below).

3.3.3 Documentation

The audit documentation form will feature the following; where a field specifies 'notes', the field shall contain both a nonconformities column and a rectification column:

- 1. Information fields identifying:
 - a. Date of audit
 - b. Name of auditor
 - c. Identification of marshalling yard audited
 - d. Identification of Project office audited
- 2. Notes field for incoming material documentation
- 3. Notes field for guarantine area marking scheme
- 4. Notes field for borrow pit documentation.
- 5. Notes field for material receiving documentation
- 6. Notes field for reinforcing steel documentation
- 7. Notes field for installed earthworks material documentation

3.3.4 Frequency

Audits will be conducted on the following schedule (please note that this schedule will apply to:

- One audit will be conducted exactly 1 week following the first receipt of material.
- Following the initial audit, an additional two audits shall be conducted on two week intervals. These (three) audits correspond to the 'setup' period of the Project Quality Plan.
- After the 'setup' period, one audit will be conducted per month, on a random basis.

4 General Work Activities

This section describes Quality Control measures that are broad in application and that apply to multiple work activities.

4.1 Drawings

Under no circumstances will any of the Subcontractor's personnel, for the purpose of constructing or inspecting any element of the work represented in the Contract, consult drawings that are not marked "Issued for Construction".

4.2 Procedures

Where the Contract specifies that the Subcontractor must submit procedures for the work it completes, such documentation shall be collected prior to the start of work subject to the procedure requirement, and made available in the Project office.

Where specified procedure requirements are subject to certification (i.e. welding procedures) such procedures shall form a part of the Quality Record.

4.3 Certifications

Certification of procedures, where specified by the Contract, shall form a part of the Quality Record and be made available in the Project office.

Where Certifications are required as a part of the Quality record for a given work activity, copies of the certification are to be attached to the Quality Form associated with the work activity in question.

4.4 Trade Qualifications

Where the Contract specifies trade qualifications for a certain work activity (i.e. welding), such qualifications shall be documented in advance of the completion of work and be made available in the Project office.

Page 52 of 80

4.5 Supervisory Qualifications

Several work elements of the Contract specify Supervision by a Qualified Supervisor. In order to document its conformance to the requirements of the Contract, it is the Subcontractors intent to implement a Supervisory Qualification Registry. This registry will be kept in the Project office and updated each time a new Supervisor is introduced or promoted on the Project.

4.5.1 Supervisory Qualification Registry

The Supervisory Qualification Registry shall consist of a chart listing the following information for each of the Subcontractor's Supervisors:

- Supervisor's name
- Check-boxes for each Contract work activity specifying Supervisory Qualifications
- Signature column for Quality Coordinator

The Supervisory Qualification Registry will form an element of the Quality Record.

4.5.2 Documentation

Documentation of any Supervisor's qualifications will be provided at the request of the Prime Contractor in the form of a resume.

4.6 Calibration & Testing of Tools & Instruments

4.6.1 General

Several work elements of the Contract specify Calibration or testing of installation tools and/or measurement instruments. In order to document its conformance to the requirements of the Contract, it is the Subcontractors intent to implement the following Quality Control measures:

- Collection and preservation of Calibration / Testing Records
- Tool Control Registry

4.6.2 Calibration / Testing Records

Prior to its use on the Project, any tool or measuring device specified in the Contract for calibration or testing will be tested (a) by the Subcontractor where its personnel and/or equipment are capable of completing such an inspection or calibration or (b) by an external calibration or testing laboratory.

Following testing or calibration of a tool or instrument, the following will apply:

- The testing or calibration certificate will be submitted to and preserved in the Project office.
 - The testing certificate will feature the instrument's serial number unit number
- A sticker or tag will be affixed to the tool or instrument indicating the date of its last calibration, and the date of its next calibration.
- An automated message will be initiated in Microsoft Outlook by the Quality Coordinator one month before the tool or instrument's next calibration.

Testing and calibration certificates will be preserved in the Project office and will form an element of the Quality Record.

4.6.3 Tool Control Registry

The tool control registry shall consist of a chart featuring the following columns:

- Tool unit number
- Description (2-4 words as required)
- Manufacturer
- Model Number
- Calibration Date
- Date of next calibration

The Tool Control Registry shall form an element of the Quality Record.

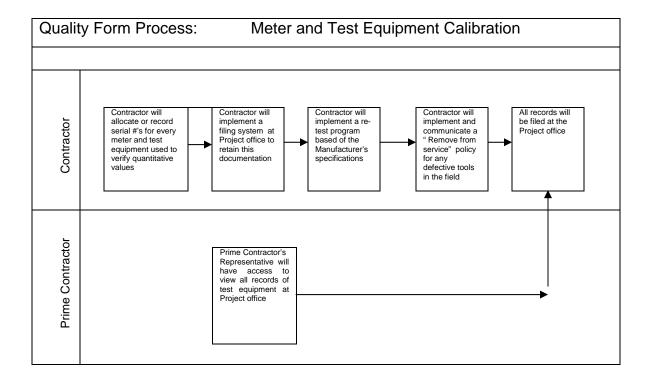

4.6.4 Periodicity of Calibration / Inspection

CIMFP	CIMFP Exhibit P-01886			Page 35	
Valard A QUANTA SERVICES COMPANY				Quality Program	
Document Number: VCLP-02-7000-0-00	Revision N 1	umber:	Last Reviewe	ed:	
Project Quality Plan:		Originato	or:	Approved:	

With regard to periodicity, the period between calibrations of a given tool or instrument shall be determined from the following according to the following precedence:

- 1. Prime Contractor's requirements as specified in the Contract
- 2. Legislative requirements
- 3. Manufacturer's recommendations
- 4. 1 year (specified in the absence of any other recommendations)

Notwithstanding the above the shortest period specified by items (1), (2), and (3) shall take absolute precedence.

4.7 Audits (Work Activities)

This section addresses only those audits associated with Quality Assurance and Control for work activities.

4.7.1 General

C <u>IMF</u> I	CIMFP Exhibit P-01886			Page 35	
Valard A QUANTA SERVICES COMPANY				Quality Program	
Document Number: VCLP-02-7000-0-00	Revision N	Revision Number: 1		ed:	
Project Quality Plan:		Originato	or:	Approved:	

Field-level audits will be instituted for the purpose of ensuring that Quality Assurance and Control measures are being implemented in accordance with the PQP. It is intended that an audit will be completed in approximately one day.

4.7.2 Procedure

The Subcontractor will compose a complete procedure for the completion of field-level audits on work activities. This procedure will implement the following elements:

- 1. Audits will include spot checks on documentation for material installed on the site.
- Audits will include supervisory spot checks to ensure (a) that each work activity being completed is supervised by a supervisor listed on the Supervisory Qualification Registry, and (b) that Supervisor is qualified to supervise the work being completed.
- Audits will include spot checks to ensure that any tools or measuring devices being used in the completion of work that are subject to testing or calibration are listed on the Tool Control Registry and further that any such tools carry a valid certificate of calibration or testing.
- 4. Audits will include an inspection of onsite documentation being completed for the purpose of documenting the completion of work and/or the inspection thereof.

- 5. Audits will include a review of the procedures documented in the Quality Record, and spot checks on affected activities to ensure that these activities are being completed in accordance with the governing procedure.
- 6. Audits will include a review for the purpose of identifying any related Quality issues, and reviewing the Project Quality Plan to ensure that it conforms to the requirements of the Contract.
- 7. The audit procedure will include a Form to be used for the purpose of documentation of the audit (referenced below).
- 8. The audit procedure will include reference to the identification of root causes and the correction thereof.

4.7.3 Documentation

The audit documentation form will feature the following; where a field specifies 'notes', the field shall contain both a nonconformities column and a rectification column:

- 1. Information fields identifying:
 - a. Date of audit
 - b. Name of auditor
 - c. Identification of marshalling yard audited
 - d. Identification of Project office audited
- 2. Notes field for installed material documentation
- 3. Notes field for supervisory qualification documentation
- 4. Notes field for tool and instrument and documentation
- 5. Notes field for work records documentation
- 6. Notes field for procedures documentation
- 7. Notes field for Contract conformity

4.7.4 Frequency

Audits will be conducted on the following schedule:

- One audit will be conducted exactly 1 week following the first completion of onsite work.
- Following the initial audit, an additional two audits shall be conducted on two week intervals. These (three) audits correspond to the 'setup' period of the Project Quality Plan.
- After the 'setup' period, one audit will be conducted per month, on a random basis.

- If a deficiency is identified, a formal notification report will be issued to the sub-contractor informing them of:
 - 1. The nature of the deficiency
 - 2. Potential severity or impact of deficiency
 - 3. Timeframe to Address Deficiency
 - Minor- 14 working days
 - Moderate- 7 working days
 - Major- 2 working days

4.8 Nonconformities

Nonconformity refers to an identified condition where a material or its associated documentation does not conform to the measures and procedures specified in the Project Quality Plan.

4.8.1 Stop Work Authority

Where a systematic nonconformity has been identified, the Quality Manager is empowered to halt any associated work until such time as he is satisfied with regard to the fact that the systematic nonconformity has been addressed or eliminated.

4.8.2 Nonconformity Reporting

'Nonconformity Reporting' as described in this section refers to the identification and tracking of material and construction nonconformities under conditions that are not explicitly addressed by the ITP.

The Contractor shall employ a nonconformity reporting Form for the purpose of logging nonconformities. Nonconformity Reports can be triggered on authority of coordinators in all management groups, construction Foremen and Supervisors, the Project Manager, or the Quality Manager. The following situations will trigger a Nonconformity Report:

- 1. Nonconformity is identified in the course of an audit.
- 2. Nonconformity is observed by the material manager or a subordinate in the course of material distribution

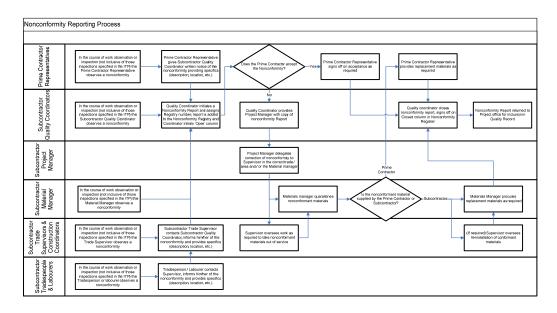

CIMFP	CIMFP Exhibit P-01886			Page 3	
Valard A QUANTA SERVICES COMPANY				Quality Program	
Document Number: VCLP-02-7000-0-00	Revision N	Revision Number: 1		Last Reviewed:	
Project Quality Plan:		Originato	r:	Approved:	

- 3. Nonconformity is observed by a tradesperson or labourer in the field and reported to their Foreman or Supervisor
- 4. Nonconformity is observed by an agent of the Prime Contractor

All Non-conformances shall be copied to the Quality Manager as soon as they are initiated. All dispositions shall be submitted to the Quality Manager, and the Client's Quality Representative, prior to the remedial work commencing, for approval. No remedial work is to commence until this approval is obtained.

4.8.2.1 Procedure

The procedures to be followed in the identification and tracking of nonconformities is illustrated in the following diagram:

All non conformances shall be copied to the Quality Manager as soon as they are initiated.

All dispositions shall be submitted to the Quality Manager, and the Client's Quality Representative, prior to the remedial work commencing, for approval.

No remedial work is to commence until this approval is obtained

4.8.2.2 Nonconformity Control

The primary mechanisms of nonconformity control to be implemented are the Material Nonconformity Report Form and the Nonconformity Register.

CIMFF	IMFP Exhibit P-01886			Page 36	30
Valard A QUANTA SERVICES COMPANY				Quality Program	
Document Number: VCLP-02-7000-0-00	Revision Number		Last Reviewe	ed:	1
Project Quality Plan:		Originato	r:	Approved:	Ì

Nonconformity Report Forms shall form an element of the Quality Record.

Page 61 of 80

IMED Evelet D 04006

4.8.2.3 Nonconformity Report Form

The Nonconformity Report Form will feature the following information:

- Nonconformity Registry number
- Name of individual that observed the Nonconformity
- Name and signature of Quality Coordinator
- Description of Nonconformity
- Description of rectification
- Description of root causes

Nonconformity Report Forms are to be filled out only by the Quality Coordinator.

4.8.2.4 Nonconformity Register

The Nonconformity Register forms a part of the Quality Record.

The Nonconformity Register will consist of a grid wherein each row provides the information associated with a given Nonconformity Report. The columns of the Nonconformity Register will feature the following information for each Nonconformity Form:

- Nonconformity Registry Number
- Brief (2-3 words) Description
- 'Open' initial column
- 'Closed' initial column

5 Specific Work Activities

This section of the PQP directly addresses the manner in which Quality Control measures will be applied to specific work activities, as required by the Contract and Tender Documents and as directed by the PQP.

5.1 Construction of Access and Right-of-Way

The goals of the Project Quality Plan with respect to Construction access and ROW are as follows:

- 1. To ensure that access is constructed in accordance with the requirements of the Prime Contractor.
- 2. To promote and maintain the positive relationships of the Prime Contractor with Landowners along the ROW.
- 3. To ensure that gates and fencing are established in accordance with the requirements of the Prime Contractor.
- 4. To ensure that the ROW is restored in accordance with agreements between the Prime Contractor and affected landowners along the ROW.
- 5. To ensure that fence and access construction, as well as ROW restoration are documented for the purpose of assuring the Prime Contractor of the Quality of work completed.

Note: Control of access to the ROW is addressed in the Subcontractor's Access Plan.

Note: Environmental issues are addressed in the Subcontractor's environmental plan.

5.1.1 Access and Approaches

To ensure the conformance of constructed access roads and approaches, the Subcontractor Quality Coordinator, in cooperation with the Subcontractor Lands Manager will maintain a complete set of Plan and Profile drawings for each awarded section of ROW. In this set of Plan and Profile drawings, the following data will be recorded:

- Location and diagrams of every off-ROW access road or trail constructed by the Contractor
- An information box on each page indicating the status of the section of ROW

- Drawing amendments showing precisely which section of the ROW is addressed on the Plan and Profile drawing in question
- Information boxes for each access road or trail indicated on the Plan and Profile drawings indicating the status of the access facilities

When access to a section of ROW is granted by the Prime Contractor, the Subcontractor Lands Manager will mark all plan and profile drawings affected by the section of ROW to which access has been granted as 'Open'. The Land Manager will then affix a status label to the drawings for each off-ROW access trail. The status label will contain one of the following comments:

- Proposed Entered in the status box when an access trail has been determined to be required for access to one or more structures.
- Approved Entered in the status box when an access trail has been approved for construction or use.
- Abandoned Entered in the status box when the use of an access trail is no longer required.

Where a proposed access trail conforms to the Prime Contractor's access plan or any amendments thereto, the trail will automatically be assigned 'Approved' status.

Typically, access trails will only be assigned 'Abandoned' status after all stringing activities have been completed, along with pre-commissioning reports.

5.1.2 ROW Restoration

To ensure the conformance of ROW restoration with the requirements of the Prime Contractor (i.e. conformance with the Prime Contractor's agreement with the Landowner) the Subcontractor Quality Coordinator in cooperation with the Subcontractor Lands Manager will maintain a complete set of Plan and Profile drawings for each awarded section of ROW. In this set of Plan and Profile drawings, the following data will be recorded:

- The status of each section with respect to ROW access
- 'Redline' Mark-ups of areas that have been disturbed, along with note-box labels describing the condition of the ROW.

Quality Program

Document Number: VCLP-02-7000-0-00	Revision Number: 1	Last Reviewe	ed:
Project Quality Plan:	Originato	or:	Approved:

The Subcontractor Lands Manager will be responsible for confirming the condition of the ROW. Following completion of construction and stringing activities, the lands manager will be responsible for directing and confirming the restoration of the ROW. Restoration of the ROW will be conducted in accordance with the requirements of the Contract.

If at any time over the course of ROW restoration a landowner directly expresses dissatisfaction with ROW restoration efforts, the Subcontractor will inform the Prime Contractor and continue with restoration activities under the Contract or any changes thereto.

Conformance of ROW restoration to the Contract will be demonstrated to the Prime Contractor by way of inspection. Documentation of the conformance of ROW restoration to the requirements of the Prime Contractor will be recorded.

5.2 Foundation Installation

The goals of the Project Quality Plan with respect to Foundation Installation are as follows:

- To ensure that the positions of installed foundations conform to the positions described by the Prime Contractor's established markers.
- To ensure that concrete employed in the construction of foundations conforms to the requirements of the Prime Contractor.
- To ensure that the compaction of backfill materials and subsurface materials beneath the structure conform to the Prime Contractor's requirements.
- 4. To ensure that the placement of reinforcing steel is completed in accordance with the Prime Contractor's requirements
- 5. To ensure that soils not conforming to the Prime Contractor's expectations are observed and reported.
- 6. To assure the Prime Contractor that all foundation work completed by the Subcontractor is completed in accordance with the Prime Contractor's requirements.

5.2.1 Positional Tolerances

The following measures will instituted to ensure that towers are installed in accordance with the Prime Contractor's drawing package:

CIM	FP Exhibit P-	01886		Page 30	35
Valard A QUANTA SERVICES COMPANY				Quality Program	
Document Number: VCLP-02-7000-0-00	Revision N	umber:	Last Reviewe	ed:	
Project Quality Plan:		Originato	or:	Approved:	

CIMFP Exhibit P-01886

- 1. Upon arrival onsite the Subcontractor's personnel will establish offset stakes to allow space for the completion of work activities while preserving the locations of the Prime Contractor's stakes.
- 2. While foundation construction activities proceed, the offset stakes will be used to establish and confirm the positional dimensions of the foundation during the construction of forms and installation of caissons, and/or rock anchors.
- 3. Following the establishment of the lower elements of the foundation, a tower template will be used to confirm the location of the stub legs relative to each other. With the stub legs secured to the template, a (Subcontractor-employed) surveyor will confirm the location and orientation of the stub legs. The template and stub legs will then be secured with temporary works for the duration of tack welding or initial concrete setup.

For the purpose of assuring the Prime Contractor of the conformance of the positional dimensions of the installed tower to the tolerances provided by the Prime Contractor, the positional dimensions will be confirmed by the surveyor and recorded on Stub Angle Checklist Form. The site of the work will be available to the Prime Contractor for inspection at any time over the course of construction.

Page 66 of 80

Document Number: VCLP-02-7000-0-00	Revision N	umber:	Last Reviewe	ed:	
Project Quality Plan:		Originate	or:	Approved:	

IMED Evelet D 04006

5.2.2 Concrete Testing

The following measures will be implemented to ensure that all concrete installed over the course of the Project satisfies the requirements of the Prime Contractor with respect to its physical properties:

- 1. The concrete mix design will be submitted to the Prime Contractor for review two weeks prior to the delivery of concrete to the site.
- 2. No concrete will be accepted onsite if delivery tickets are not provided. These tickets will be preserved in the Quality Record and attached to Foundation Report for Structure for the purpose of associating loads of concrete (and their associated test cylinders) with the structure locations at which they were deposited.
- The Subcontractor will cooperate with the Prime Contractor's Third Party testing subcontractor with respect to the coordination of concrete testing (slump test, break test, compressive testing, etc.).

5.2.3 Compaction Testing

Compaction testing will be performed in accordance with the requirements of the Contract; associated documentation will be collected by the Subcontractor for inclusion in the Quality Record and attachment to any required Forms. All relevant documentation will also be forwarded to the Prime Contractor. In the event that compaction testing reveals incompetent soils, the Subcontractor's Supervisor will immediately notify the Prime Contractor's representative.

Page 67 of 80

CIMFI	P EXNIBIT P-	U1886		Page 36
Valard A QUANTA SERVICES COMPANY				Quality Program
Document Number: VCLP-02-7000-0-00	Revision N	umber:	Last Reviewe	ed:
Project Quality Plan:		Originato	or:	Approved:

5.2.4 Forming and Placement of Reinforcing Steel

The following measures will be implemented for the purpose of ensuring that reinforcing steel is formed and placed in accordance with the requirements of the Prime Contractor:

- 1. The Subcontractor will submit CWB-approved welding procedures to the Prime Contractor for review 2 weeks prior to the completion of welding in the assembly and/or placement of reinforcing steel. In the completion of welding on any reinforcement steel installed on the Project, these welding procedures will be strictly adhered to (Note: Where welding is unnecessary in the assembly and placement of reinforcing steel, no such procedures will be submitted; the Subcontractor does not intend to weld together reinforcing steel except where it is specified by the Prime Contractor's documents).
- 2. The Subcontractor will submit bar placement diagrams to the Prime Contractor for review two weeks prior to the placement of reinforcing steel in a structure foundation (spread footing or castin-place caisson). For the generation of these drawings, the Subcontractor will require that the Prime Contractor distribute 'Issued for Construction' foundation drawings.
- 3. The Subcontractor will collect and archive mill test reports in the Quality Record at the time of receiving reinforcing steel at the Project marshalling yard. Mill test reports will be reviewed for the purpose of ensuring that received steel conforms to the requirements of the Prime Contractor with respect to the physical properties of the steel. In the event that a shipment of steel does not satisfy the requirement of the Prime Contractor, it will be returned to the supplier.
- 4. At the time of receiving, the Subcontractor will clearly label received reinforcing steel (or bundles thereof) with weather-proof bar tags referring the steel back to its mill test report. These tags will remain with the steel until such time as it is ready for installation at a foundation location.

Page 68 of 80

For the purpose of assuring the Prime Contractor of the conformity of installed reinforcing steel to its requirements, at the time of installation, bar tags will be removed from the reinforcing steel and affixed to one of the following Quality Reports (dependent upon the foundation element installed):

- 1. Foundation Report for Structure
- 2. Cast-in-Place Concrete Pile Log

These forms, along with the associated bar tags, will be submitted to the Prime Contractor as an element of the Quality Record.

5.2.5 Subsurface Confirmation

The following measures will be adopted for the purpose of confirming that the subsurface conditions encountered in the course of excavation match the subsurface conditions predicted by the Prime Contractor, or for the purpose of ensuring that — in the case where subsurface formations do not conform to the predictions of the Prime Contractor — the Prime Contractor is informed of the nature of the subsurface condition:

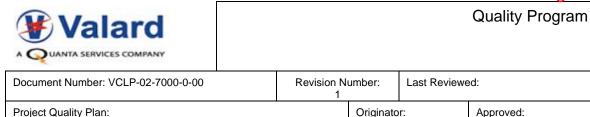

1. The Subcontractor will observe the nature of excavated soils and record such information.

5.3 Tower Installation

The goals of the PQP with respect to tower installation are as follows:

- 1. To ensure the proper fit and engagement of tower members.
- 2. To confirm the length and type of bolts installed on towers are in accordance with the requirements of the Prime Contractor.
- 3. To prevent the installation of bent, deformed, or damaged members on towers.
- 4. To ensure that test devices used in the assembly and erection of towers are properly calibrated.
- 5. To ensure that towers are installed on plumb.
- 6. To assure the Prime Contractor of the Quality of all tower installations.

5.3.1 Fit and Engagement

For the purpose of ensuring the fit and engagement of installed steel lattice tower members the Subcontractor will adopt the following measures:

- 1. At the time of assembly of tower panes or box sections assembly personnel will inspect joined members to ensure that there are no gaps at bolted joints (or in the case of back-to-back L-beams with spacers, personnel will check to ensure uniformity of the gap).
- 2. At the time of setting of the lower section of the tower on the foundation stub legs, the Foreman will conduct a visual inspection of the joint between the lower tower members and the stub legs to ensure there is no gap between the members and the tower is not twisted at the stub.
- 3. At the time of complete tower assembly (i.e. assembly of panes and sections) installation personnel and Foreman will conduct a visual inspection of joint plates and associated seams to ensure there is no gap between the joined sections of tower.
- 4. Additional spot inspections of tower arms will occur at the time of conductor installation and spacer installation. Personnel involved in these activities will report any discrepancies to their Supervisor who will in turn trigger a nonconformity report.
- 5. Subcontractor Foremen / Supervisors will perform post-assembly inspections of towers for the purpose of identifying nonconformities.

The following documentation will be provided to the Prime Contractor for the purpose of assuring the fit and engagement of completed tower assemblies:

- 1. Tower Assembly Acceptance Form
- 2. Structure Assembly and Installation Inspection Report

5.3.2 Length and Type of Bolts

The Subcontractor will adopt the following measures to ensure the correct length and type of bolts:

- 1. Assembly personnel will be directed to assemble towers using only hardware provided in tower kits by the Prime Contractor.
- 2. Assembly personnel will be given information regarding the visual identification of properly chosen size of fastener both before and after installation. Information provided will cover the following points:
 - a. Selecting the correct diameter of fastener

- b. Selecting the correct length of fastener
- c. Confirming the correct length of fastener (following installation)
- At the time of tower inspections (whether following partial or complete assembly), supervisory personnel will be directed to examine installed fasteners to ensure they have been chosen properly and are of appropriate length.
- 4. The Subcontractor will cooperate with the Prime Contractor with respect to the coordination of inspections of towers (it is assumed the Prime Contractor will also be examining fasteners to confirm correct choice).
- 5. Fastener choice will be cited as a potential element to be observed in the submission of nonconformity Reports.

For the purpose of assuring the Prime Contractor that towers have been assembled using the correct fasteners, fastener choice shall form an element of the inspections associated with the following Forms:

- 1. Tower Assembly Acceptance Form
- 2. Structure Assembly and Installation Inspection Report

5.3.3 Bent, Deformed, or Damaged Items

For the purpose of identifying, eliminating, and/or correcting bent deformed or damaged tower members and/or fasteners, the following measures will be implemented:

- 1. Tower packages will be inspected both at the time of receiving and at the time of arrival onsite for assembly. Bent, deformed, or damaged members will be identified and logged on the structure shakedown report for notification of the Prime Contractor.
- 2. As towers are assembled, individual parts will be examined for fit and dimension. Bent, deformed, or damaged members will be identified and logged on the structure shakedown report for notification of the Prime Contractor.
- In the event that the Subcontractor identifies bent, deformed or damaged items, it will make written application to the Prime Contractor to the Prime Contractor of its intentions for the members (rework, remanufacture, re-order, etc.) prior to proceeding.

Page 71 of 80

CIMF	P Exhibit P-0	01886		Page 3	<u>7</u> 1
Valard A QUANTA SERVICES COMPANY				Quality Program	
Document Number: VCLP-02-7000-0-00	Revision Nu	umber:	Last Reviewe	ed:	
Project Quality Plan:		Originate	or:	Approved:	

- 4. Assembly personnel will be directed not to install bent or damaged members on towers.
- 5. At the time of tower inspections (whether following partial or complete assembly), supervisory personnel will be directed to examine tower members to ensure they are free of damage and defects.
- 6. The Subcontractor will cooperate with the Prime Contractor with respect to the coordination of inspections of towers (it is assumed the Prime Contractor will also be examining members to confirm that they are free of damage).
- 7. Member condition will be cited as a potential element to be observed in the submission of nonconformity Reports.

For the purpose of assuring the Prime Contractor that all towers have been assembled using only members that are straight and free of damage, member damage will be an element addressed in the inspections associated with the following Forms:

- 1. Structure Shakedown Report Form
- 2. Tower Assembly Acceptance Form
- 3. Structure Assembly and Installation Inspection Report

Page 72 of 80

5.3.4 Installation Bolt Torque

Note: Because the two subjects are closely related and inspected in sequence, Installation Bolt Torque is addressed below along with Locking Devices.

5.3.5 Testing Tools and Calibration

In order to ensure that testing tools used in the assembly of towers conform to the requirements of the Contract, the following calibration schemes will be implemented:

- 1. Where power wrenches are used to torque bolts:
 - a. Calibrated slip devices will be used to prevent over-torque situations.
 - b. The Subcontractor will either procure the services of a testing laboratory to calibrate the slip devices daily, or it will purchase a standard and develop a testing rig for the purpose of calibrating slip devices on a daily basis.
- 2. Where manual wrenches are used to torque bolts:
 - a. To prevent over-torque situations, power wrenches having a maximum torque output less than the minimum torque specified in the Contract (40 ft-lbs) will be used for initial installation of bolts on the structure
 - b. Final torque installation will be completed using calibrated manual torque wrenches.
 - c. The Subcontractor will either procure the services of a testing laboratory to calibrate the slip devices monthly, or it will purchase a standard and develop a testing rig for the purpose of calibrating torque wrenches on a monthly basis.

For the purpose of assuring the Prime Contractor of the conformity of its torque devices to the requirements of the Contract, the following documentation will be included in the Quality Record for submission to the Prime Contractor (ref. Section 4.5 of the PQP):

- 3. Calibration / Testing Records
- 4. Tool Control Registry
- 5. Labels applied to torque devices

5.3.6 Locking Devices (and Installation Bolt Torque)

In order to ensure that locking devices and torque devices are used in accordance with the requirements of the Contract the following measures will be adopted:

- Copies of the torque charts for fasteners used in tower assembly as provided in the Contract will be distributed in the field (ideally these could form a part of the acceptance form or be printed on the back thereof).
- 2. Assembly personnel will receive training with respect to the use of power wrenches (with and without torque limiting devices) and manual torque wrenches.
- 3. Before the bolts to be installed in any given structure or surface thereof are secured at rated torque, all bolts on that structure or surface will be installed loosely, following which all bolts on the structure or surface will be installed to rated torque.
- 4. After each nut on the structure is torqued, the individual confirming the fastener torque will apply red permanent marker to the back side of the bolt.
- 5. After all bolts on a structure or surface are correctly torqued and the bottoms marked with red permanent ink, the structure will be inspected by the Foreman or Supervisor; the inspecting party will examine all fasteners for proper size and length, and torque-test 10% of the fasteners with a manual torque wrench. The inspection will then be recorded on the appropriate Quality Form.
- 6. Following the inspection of the structure or surface by the supervisor, each bolt will be deformed in the first thread emerging from its associated note using a punch/chisel and hammer ('caulking' or 'corking'). After each bolt is deformed, the individual performing the corking will then apply black permanent ink to the back of the bolt.
- 7. Following corking (caulking) and marking, the supervisor will conduct a second inspection.

The installation and marking procedure described in steps 4-7 is routine for the Subcontractor's tower assembly crews; it is referred to as the 'Torque and Cork' method.

Page 74 of 80

CIMFP	Exhibit P-	01886		Page 3	74
Valard A QUANTA SERVICES COMPANY				Quality Program	
Document Number: VCLP-02-7000-0-00	Revision N 1	umber:	Last Reviewe	ed:	
Project Quality Plan:		Originato	or:	Approved:	

For the purpose of assuring the Prime Contractor of the conformance of tower assemblies to the requirements of the Contract, the following Forms will be used to document the inspections conducted in the course of and following assembly:

- 1. Tower Assembly Acceptance Form
- 2. Structure Assembly and Installation Inspection Report

5.3.7 Plumb / Straightness of Erected Towers

Because of the rigid nature of lattice towers, tubular steel monopoles, and wood pole H-frames, the straightness of a tower is entirely dependent upon a level foundation. As such, ensure that a tower is plumb equates precisely to ensuring that the foundation is level. The following measures will be implemented for the purpose of ensuring that towers are installed in plumb in accordance with the requirements of the Contract:

- 1. Upon arrival onsite the Subcontractor's personnel will establish offset stakes to allow space for the completion of work activities while preserving the locations of the Prime Contractor's stakes.
- While foundation construction activities proceed, the offset stakes will be used to establish and confirm the positional dimensions of the foundation during the construction of forms and installation of caissons, and/or rock anchors.
- 3. Following the establishment of the lower elements of the foundation, a tower template will be used to confirm the location of the stub legs relative to each other. With the stub legs secured to the template, a (Subcontractor-employed) surveyor will confirm the location and orientation of the stub legs (this process will be inclusive of confirming that the template is level). The template and stub legs will then be secured with temporary works for the duration of tack welding or initial concrete setup.

For the purpose of assuring the Prime Contractor of the conformance of tower assemblies with respect to plumb, each installation will be documented on a Stub Angle Checklist.

5.4 Installation of Conductors

The goals of the PQP with respect to the installation of conductors are as follows:

- 1. To ensure that splice and deadend connectors are installed in accordance with the Prime Contractor's requirements.
- 2. To ensure that conductors are installed at the sag specified by the Prime Contractor.
- 3. To ensure that conductor tie-ins are completed in accordance with the requirements of the Prime Contractor.
- 4. To assure the Prime Contractor of the Quality of all conductor installations.

5.4.1 Sleeves, Deadends, and Electrical Connectors

For the purpose of ensuring the conformance of sleeves, deadends, and connectors to the requirements of the Contract, the following measures will be adopted:

- 1. All personnel involved in conductor bonding will receive training in the use of compression-type splices and deadends.
- 2. Completed splices will be inspected in detail for defects; unsatisfactory splices will be cut out and replaced.
- 3. Compression-type splices will be inspected using go-no-go gauges 'across the flats'. Personnel will be provided with training in the use of go-no-go gauges.
- At the option of the Prime Contractor, all implosive connectors will be installed in the presence of the Prime Contractor's Representative.
- 5. Implosive type sleeve connectors will be installed in accordance with Specifications.
- 6. Compression and implosive type connectors will be x-ray inspected at the Prime Contractor's option.

To assure the Prime Contractor of the conformance of deadends, sleeves, and connectors to the requirements of the Contract, splicing and connecting activities will be documented on the following Forms:

- 1. Conductor Splice Data Sheet
- 2. Conductor Splice Acceptance Form

To assure the Prime Contractor that the Subcontractor has properly accounted for all implosive sleeve connectors in its possession, the Subcontractor will document the storage and installation of implosive sleeve connectors on the following Forms:

- 1. Blasting Logs
- 2. Magazine Logs

5.4.2 Sag Verification

For the purpose of verifying the sag of installed conductors, the following measures will be implemented:

- 1. In advance of stringing / sagging operations, the Subcontractor's proposed butt down and pulling setup areas will be submitted to the Prime Contactor for review.
- 2. Butt-down locations will be chosen so as to minimize conductor waste.
- 3. The Subcontractor will submit a written request for sag data to the Prime Contractor.
- 4. Stringing sheaves will be chosen to conform to the requirements of:
 - a. The Contract
 - b. The conductor manufacturer
 - c. IEEE standard 524
- 5. Stringing activities will be supervised by a qualified Supervisor with extensive experience in the tension stringing method of bundled conductor installation.
- 6. Stringing activities will be performed in conformance with the requirements.

For the purpose of assuring the Prime Contractor of the conformance of strung conductor to the requirements of the Contract, sagging activities will be documented in the following Forms:

- 1. Review of Contractor's Pull Sites Form
- 2. Stringing and Sag Data Reports

5.4.3 Ground Clearance Confirmation

As stated in the specification, ground clearance confirmation will be the responsibility of the Prime Contractor. The Subcontractor will cooperate with the Prime Contractor's Representative with respect to providing schedule information and confirming which sections of line are ready for ground clearance confirmation.

IMED Evelet D 04006

5.4.4 Conductor tie-ins

For the purpose of ensuring that conductor tie-ins are completed in accordance with the requirements of the Contract the following measures will be implemented:

- 1. Clipping personnel will receive training in the correct installation of tie-in hardware in accordance with specifications. This training will be inclusive of:
 - a. Discussion of insulator handling and care
 - b. Discussion of hardware alignment and installation
 - c. Discussion of correct installation and orientation of cotter keys to allow for hotstick installation / removal.
- 2. Clipping personnel will be instructed in the correct installation of insulator string tie-ins with respect to offset distance.
- 3. Inspections will be conducted to ensure that conductor tie-in hardware is properly installed in accordance with the specification.

For the purpose of assuring the Prime Contractor that tying-in activities have been completed in accordance with the requirements of the Contract, the Subcontractor will document tying-in activities on Final Phase III Acceptance Form.

5.5 Final Inspections and Commissioning Patrols

The goals of the PQP with respect to final inspections and commissioning patrols are as follows:

- 1. To provide a final opportunity to ensure that all Quality-related properties of sections of the transmission line are confirmed prior to final handover of the line for commissioning.
- 2. To ensure that all commitments of the Subcontractor under the Contract have been satisfied prior to its closure of such Contract.
- To assure the Prime Contractor of the overall Quality of all works constructed under the Contract prior to final handover of the transmission line.

Final inspections and patrols will be conducted and documented in accordance with Contract and in full cooperation with the Prime Contractor. These inspections will be documented in the following Forms:

- 1. Transmission Pre-Commissioning Check Form
- 2. Patrol Worksheet

4.1 SUBCONTRACTOR POLICY

It is the policy of Valard that all direct hire and subcontractor employees are entitled to work in a safe environment. To achieve this, every reasonable effort shall be to eliminate hazards and prevent incidents that cause injury to workers, environmental damage and property damage. This effort shall include controls applied both before awarding a subcontract and during the execution of the work.

Valard believes that taking proper precautions can prevent incidents. It is the duty of every subcontractor, in the performance of their subcontract, to cooperate with and comply fully with Valard's Health, Safety & Environmental Manual and Provincial/Federal Health, Safety & Environmental Regulations.

4.2 PRECONTRACT CONTROLS

All subcontractors are to be evaluated before being considered for a subcontract to ensure they are capable of meeting Valard's safety standards.

Subcontractors being evaluated must submit the following documentation to Valard.

- Copy of subcontractor's safety manual
- Completed copy of Form 4.5.2 Subcontractor Pregualification Questionnaire Form
- Copy of A WCB clearance letter. If the subcontractor is unable to provide the document, the client must approve them prior to them entering the worksite.

The Vice President of Health and Safety will review these documents for acceptability. The subcontractor can be rated as "approved", "approved with conditions" and "rejected". Subcontractors with a "rejected" rating may be considered only if there are no "approved" or "approved with conditions" rated contractors available.

Subcontractors are to be advised that they are responsible for screening any of their subcontractors they retain to ensure they are capable of meeting Valard's Safety standards.

Valard's Health, Safety and Environmental Department will review and evaluate subcontractor's 4.5.2 Prequalification Questionnaire Form by completing Form # 4.5.3 and will either approve their Manual or request that Valard's HS&E Manual be followed.

4.3 PRECONSTRUCTION CONTROLS

Before subcontractors are permitted to mobilize on site and begin work, the following steps must be taken:

- Subcontractor Policy Agreement Form #4.5.1 must be signed and forwarded to the Edmonton office.
- A copy of the subcontractor's safety manual must be submitted to the project Area Supervisor.
- WHMIS Material Safety Data Sheets are to be submitted to the Area Supervisor or the Safety Coordinator for every controlled product the subcontractor uses or stores on site. MSDS's are not valid if they are over three years old. (See Section 13 of this Manual)

All subcontractor personnel must complete CSTS (Construction Safety Training System, offered by the Alberta Construction Safety Association) if:

Docum	ent D	Description				Sub-Co	ontract	or Controls
Created By: A. Felczak			Doc. Nur	nber	Health,	Safety & Envi	ronmen	ntal Policy 4.00
Date:	Sep	ot. 23, 2003	Revision:	5	Revised by:	A. Felczak	Date:	Jan. 3, 2012

- The client requires it. Workers arriving for orientation must have a valid CSTS wallet card in their possession.
- Subcontractors are to ensure that they have an adequate number of employees trained in First Aid to meet the requirements of the OH&S First Aid Regulations.
- The subcontractor's Site Supervisor must attend a pre-job meeting and physically inspect the work site.
- Subcontractors must submit a Hazard Analysis for their scope of work. (See Section 6 of this manual)

4.4 CONSTRUCTION CONTROLS

Subcontractors in the process of performing work under the control of Valard must meet the following requirements:

- All work will be performed in accordance to the subcontractor's safety manual. If
 the standards set out in the subcontractor's manual is exceeded by Valard's
 Health, Safety & Environmental Manual, our clients Safety Manual and/or
 Legislation, the higher standard must be adhered to. Subcontractors without a
 manual or without elements included in Valard's manual shall follow Valard's
 manual.
- Workers arriving on a Valard's Site must receive Valard's Site Specific Orientation as per Section 8 of this manual and any applicable client required orientations.
- Subcontractors will be responsible for monitoring the performance of their employees and subcontractors and taking corrective action when necessary. (See Section 3 of this manual)
- All subcontractor employees will participate in a morning Tailboard (pre-task meeting) Valard and its subcontractors will hold joint meetings whenever practical. (See section 6 of this manual)
- All site subcontractor employees will participate in a monthly safety meeting. (See Section 8 of this manual)
- All subcontractors will perform a bi-weekly safety inspection and submit it to Valard's Foreman or Safety Coordinator. (See Section 9 of this manual)
- Subcontractors shall ensure that their employees have adequate Personal Protective Equipment available to them (See Section 10 of this manual)
- Subcontractors are required to report all incidents and near misses to Valard's Foreman and the Vice President of Health, Safety & Environment.
- Valard and their Subcontractors shall investigate as a minimum:
 - Lost Time Incidents
 - 2. Medical Aid Incidents
 - 3. Incidents resulting in Modified Work
 - 4. Incidents that had potential for serious injury or property damage
- Valard and their subcontractors will provide the investigation of incidents results to the client if required.
- Subcontractors are to ensure their employees are familiar with site emergency procedures. (Both Valard's and the owner/clients if applicable).

Docum	nent D	Description				Sub-Co	ontract	or Controls
Created	Ву:	A. Felczak	Doc. Nun	nber	Health,	Safety & Envi	ronmer	ntal Policy 4.00
Date:	Sep	ot. 23, 2003	Revision:	5	Revised by:	A. Felczak	Date:	Jan. 3, 2012

- Valard may require a manpower roster within one hour of work commencing for the day for evacuation head count purposes.
- Subcontractors shall actively manage WCB claims and will provide Modified Work whenever possible.
- Subcontractors shall at all time maintain a substance abuse program equivalent while on the worksite as documented in the Construction Owners Association of Alberta Model. (See Section 16 of this manual). In cases where the client's Alcohol and Drug Policy differs from the Canadian Model then Valard will inform the subcontractor and will provide a copy of the client's Alcohol and Drug Policy and that this policy must be communicated to their employees and it must be adhered to while working on their worksite.
- Subcontractors shall maintain all of their tools and equipment as per manufactures specifications. All tools and equipment must be inspected at the start of the job and then on a monthly basis thereafter. The inspections must be recorded and forwarded to Valard's' Area Supervisor or Safety Advisor. All mobile equipment must be accompanied with a mechanic's report on its condition including a signed statement that all safety switches operate as per manufacturer's design. Cranes/lifting devices require a Boom certificate dated within the past 12 months and recertified if it is expired before continuing work.
- On the last working day of the month, subcontractors are to submit their statistics for themselves and their subcontractors to the Area Supervisor or Safety Coordinator. The statistics must include:
 - 1. Number of First Aid Incidents
 - 2. Number of Medical Aid Incidents
 - 3. Number of Lost Time Incidents
 - 4. Number of Near Miss Incidents
 - 5. Number of Property Damage Incidents
 - 6. Number of Environmental Incidents
 - 7. Total Man Hours Worked
- Subcontractors are to provide or develop any necessary safe work practices and procedures. The practices and procedures must be applicable to the project.
- Subcontractors will be evaluated for compliance after a maximum of 30 days on site using Valard's Subcontractor's Site Safety Audit Form #4.5.4.
- All subcontractors will be evaluated after the specific project is completed using the following information;
 - Monthly Health and Safety stat reports as required in Section 21 (monthly HS&E reports)
 - 2. Site Inspection reports
 - 3. Form 4.5.2 Subcontractor's pre-qual
 - 4. Form 4.5.3 Subcontractor's Pre-qual audit
 - 5. Form 4.5.4 Subcontractors site safety audit
- The following individuals are to be present during the projects subcontractors' evaluation meeting, Valard's Vice President of Health and Safety, Project Manager, site Superintendent, site Safety Advisor, Valard's person in charge of

4.5.1 SUBCONTRACTOR POLICY AGREEMENT FORM.

It is the policy of Valard Construction that all direct hire and subcontractor employees are entitled to work in a safe environment. To achieve this, every reasonable effort shall be to eliminate hazards and prevent incidents that cause injury to workers, environmental damage and property damage. This effort shall include controls applied both before awarding a subcontract and during the execution of the work.

Valard Construction believes that taking proper precautions can prevent incidents. It is the duty of every subcontractor, in the performance of their subcontract, to cooperate with Valard Construction and comply fully with Valard's Health, Safety & Environmental Manual and Provincial Health, Safety & Environmental Regulations.

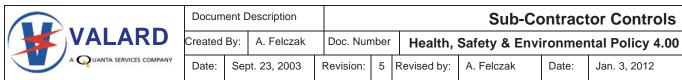

I acknowledge and agree with the above policy and I will personally endeavour to ensure that the employees of my company comply with all of the above. I understand that non-compliance with these policies may result in the dismissal of individuals on site and/or the termination of my contract.

Dennis Chevrier

POSITION

Quality Manager

SUMMARY

Dennis has over 43 years of experience and has been with Valard for the past 6 years.

EMPLOYMENT HISTORY

Valard LP

Calgary, AB 2006 - Present

Material Management Logistics/ QA

- Manage materials inventory, manage construction procedure on four substations on 415km of 115kV transmission line for DeBeers/Amec Victor Transmission Line Project in James Bay, ON.
- Inspector of final work for DeBeers project.
- Supervise crews installing poles and framing transmission structures on 115 kV circuits.

Comstock Canada Burlington, ON 2004 - 2005

Assistant Superintendent / General Foreman

- Manage materials inventory, ordering and handling on new 230 kV circuit Brascan Power Project -Anjiami X Sault Ste. Marie.
- Assist the Senior Superintendent in the everyday operations in monitoring the production, quality and efficiencies of the +120 men on the project.
- In association with the Safety Dept., evaluate, develop, and implement job plans, and health and safety policies.
- Monitor the performance and production of contractors working for Comstock Canada.

Powertel Utilities Contractors

Whitefish, ON 2000 - 2003

Lineman/Supervisor

- Construct overhead distribution and transmission line on isolated/de-energized circuits.
- . Supervise crews installing poles and framing transmission structures on 115 kV circuits.
- Use of live line techniques to change 115 kV insulators on towers

Caribbean Utilities Company

Grand Cayman, Cayman Islands 1998 - 1999

Line Manager

- Accountable for the everyday operations of a department of 35 employees constructing and maintaining the electrical system of a highly commercialized and recreational area of the Caribbean.
- Assess, develop and implement training requirements for the Lines Department.
- Prepare, scrutinize, and execute multi-million dollar capital, operations, maintenance and • administrative budgets.

Ontario Hydro

Ontario 1995 - 1998

Custom Operations Manager

- Accountable for the safe and reliable source of electrical power to over 9,000 residential and industrial customers of Manitoulin Island and surrounding area.
- Manage a local work force of 30 employees consisting of clerical, forestry, lines and mechanical staff.
- Develop, present and monitor a health and safety program for the multi trade work force of this operations center.
- Develop, communicate and monitor environmental policies that adhere to or exceed legislative requirements (due diligence).

Ontario Hydro

Ontario 1979 - 1995

Area Line Supervisor

Supervise a staff of highly trained employees in the construction, maintenance and inspection of rural lines serving over 35,000 heavy industrial, commercial, and residential customers and 400 kms of transmission circuits (Voltages from 115 kV - 500 kV) feeding the provincial grid system.

- Trained and experienced in the installation of implosive and standard compression sleeves of overhead conductors.
- Supervise the stringing of overhead transmission conductors (conventional and tension stringing) of various conductor sizes.
- Plan and conduct seminars on training and safety meetings for individual and group sessions.
- Evaluate, develop, write, and instruct new job procedure

Ontario Hydro

Ontario 1969 - 1979

Journeyman Lineman

- Construct and maintain overhead and underground distribution circuits on voltages from 12 kV to 44 kV. Work methods include the use of rubber gloves, live line tools, and insulated aerial devices.
- Construct and maintain transmission circuits on wood pole and steel tower structures on voltages from 115 kV to 500 kV. Work methods included the use of live line tools and insulated aerial devices.
- Perform helicopter patrols analyzing conditions of distribution and transmission circuits and preparing detailed reports.
- Instruct 4th year apprentices at the Ontario Hydro Training office in Orangeville.

- Professional Development
- Job Planning
- Work Area Protection
- Utility Work Protection Code
- Live Line Tool Techniques
- High Voltage Electrical Awareness
- Standard First Aid and CPR (St. John's Ambulance)
- Bucket Rescue and Escape
- Pole Top Rescue
- Grounding and Bonding
- TDG
- Transportation of Regulated Waste
- WHMIS
- Fall Arrest
- Certified Health and Safety Member

Guy Corbiere

POSITION

Conductor Superintendent

SUMMARY

Guy has been a part of the Valard team for 6 years

EMPLOYMENT HISTORY

Valard Construction LP Calgary, AB 2006 - Present Supervisor - Hanna Region Transmission Development Project-ATCO Electric

- Supervisor of tension stringing activities for double circuit 240kV line
- Supervisor or sagging operations
- Co-ordinate tying in, dead ending and splicing activities

Supervisor - Debottlenecking Project-SNC Lavalin

- Supervisor of tension stringing activities for double circuit 240kV line
- Supervisor or sagging operations
- Co-ordinate tying in, dead ending and splicing activities

Supervisor - Bruce x Milton 500kV-Hydro One

- Supervisor of tension stringing activities for double circuit 500kV line
- Supervisor or sagging operations
- Co-ordinate tying in, dead ending and splicing activities

Foreman - Manitoba Hydro Transmission Project

 Direct assembly and erection activities on 240kV lattice tower line running from Snow Lake MB to The Pas, MB

Foreman - Kearl Oil Sands Substation

Oversee the construction and tie in to constructed transmission and distribution lines.

- Construction Safety Training System
- High Energy Joining Blasting Operations Permit
- Equal potential Bonding and Grounding Training
- Flagperson Training
- Radial Book Digger Training
- Transportation of Dangerous Goods
- WHMIS
- Journeyman Powerline Technician
- First Aid/CPR
- Fortis-Environmental Awareness Training
- Hydro One Electrical Awareness
- PME Training- Crawler Tractor/Dozer

Lonnie Eirickson

POSITION

Construction Supervisor

SUMMARY

- Lonnie recently joined Valard last year and comes with over 22 years of experience and over 1000 km as Foreman, Lineman and Operator
- Power lines worked on: Transmission & Distribution 500 kV, 230 kV, 138 kV, 115 kV, 72kV, 66kV and 25 kV

EMPLOYMENT HISTORY

Valard Construction LP

Calgary, AB 2011 - Present

Stringing Superintendent

- Topping towers, erection and stringing done by helicopter
- String wire, tension & slack, clamping in the wire, sagging, dead-end wire

Manitoba Hydro Herblett-Ralls TL

2010 - 2011

Construction Manager

- Aerial framing of wood structures
- Framing wood structures
- Aerial framing of wood structures
- Framing wood structures

Hydro One Networks Inc.

Ontario 2009 – 2010

Foreman and Construction Manager

- Bruce x Milton Reinforcement
- Canadian Projects-Lower and Upper Clowhom Transmission Line

ATCO

Peace Region, AB 2007

Foreman

Foreman on various assembly, framing, setting, erection and stringing projects

Weyerhaeyser

2007

Foreman

Foreman on 15kV Tie Line

CNRL Horizon

2006 – 2007

ATCO

ForemanForeman on substation and transmission project

Foreman

2003 - 2004

Foreman on Athabasca River Crossing, Transmission project

Manitoba Hydro

Glenboro, MB

Foreman

Installing a Gulfport 230 kV line from Glenboro, MB to the USA border.

- Journeyman Powerline Technician-Red Seal #J-10-96063
- Aerial Work Platform
- Cargo Securement
- CSTS 3.2
- First Aid / CPR
- Flagperson Tranining
- High Energy Joining
- Hours of Service
- OSSA Regional Orientation
- Pre & Post Trip Inspection
- Safe Use and Insattation of Xeconex
- Transportation of Dangerous Goods
- WHMIS

Andy Felczak

POSITION

Vice President Health & Safety

SUMMARY

- Over 12 years of experience in Health and Safety
- Extensive Management, Leadership and Human Relations Experience

EMPLOYMENT HISTORY

Valard Construction LP Edmonton, AB 2003 – Present

Health Safety and Environmental Manager

- Development and maintenance of the Health, Safety & Environmental Manual
- Developed a Behavioral Based Observation Program, Hazard Analysis Process, and At Home Safety Program
- Responsible for the implementation of a Modified Work process and a Recognition Program
- Responsible for WCB and regulatory updates, for British Columbia, Alberta, Saskatchewan, Manitoba, Ontario, Yukon, Northwest Territories and Nunavut
- Responsible for the Training and development of the workforce
- Responsible for the overall Health and Safety process, developed a HS&E Manual/Policies and Procedures and Safety Handbook
- Member of the COAA Safety Committee and ACSA

Bird Construction Co. Edmonton, AB 2002 - 2003

Health Safety and Environmental Manager

- Development and maintenance of the Health, Safety & Environmental Manual
- Developed a behavioral based observation program, Hazard Analysis process as well as an At Home Safety Program
- Recipient of the following awards:
- COAA Construction Owners Association of Alberta Award for HS&E Program development and implementation process
- ACSA- Alberta construction Association Award for outstanding achievement in the Health and Safety program- Developed, Incident Reporting and Observation database Programs to track trends
- Responsible for WCB, injury reduction and associated correspondence with British Columbia, Alberta, Saskatchewan and Ontario Boards
- Responsible for WCB, in British Columbia, Alberta, Saskatchewan and Ontario

Alliance Pipeline Ltd.

Calgary, AB 1999 - 2001

1997 - 1999

Safety Advisor Canadian/USA Operations

- The development and implementation of the Web based Health and Safety Manual System, a Safety Handbook and developed an Environmental program for the field personnel
- Developed a training/orientation program and performed audits for station preparedness
- Worked with the National Energy Board in ensuring that the Health Safety and Environment program met the NEB requirements
- Introduced a Behavior Based Safety Program
- Project Lead on the Web based Incident Reporting System developing team

Syncrude Canada Ltd. Fort McMurray, AB

Project Safety Manager Liason for Kellogg Brown and Root

 Overall design, implementation, coordination and performance monitoring of safety programs for Syncrude's Debottleneck II Project being constructed by Kellogg Brown and RootDesigned and implemented the Safety Recognition program, which is based on a behavioral based safety

foundation.

- Adapted and designed the Total Safe Task Observation safety program for use on the site, and have conducted training of key management personnel in its principles
- Involved in decision-making and advisory role to provide safe work procedures and plans for the construction and startup of the plant
- Conducted ongoing analysis and review of incidents for the purpose of continually improving
 procedures, work practices and safety performance of the project. Played a key role in developing
 strategy management of the construction project
- Developed a Construction orientation book with an overview of the Syncrude plants. Responsible for WBC related issues and analyzing injuries with recommendations for area improvements
- Updated senior management on project's progress and successes

Syncrude Canada Ltd. Fort McMurray, AB 1990 - 1997

Senior Loss Management Safety Specialist

- Supervising all construction activities in the Upgrading Area
- Overall responsibility for the implementation of the Environmental, Health, Safety and Loss Management Program, patterned after the DNV/ILCI program in Upgrading, which is a large-scale oil refinery with approximately 700 employees and 500 contractors
- Implemented several EHS and Loss Management issues such as Change Management, Task
 Analysis and Task Observations including the development of an Oracle based program for its use
- Revision, update and auditing of the Loss Management Standards to reflect and address the Company's redesigned organization
- Supervision of the Safety Specialists during turnarounds.
- Coordinated and lead accident/incident investigations, including appropriate follow-up to prevent reoccurrence of incidents
- As a chairman of Work Protection Code # 8 responsible for updating senior management including COO of changes

LICENSES & CERTIFICATION

Occupational Health and Safety Program Instructor affiliated with the University of Alberta at Keyano College

ADDITIONAL EDUCATION / TRAINING

- WCB Claims Management Safety and Loss Management Trainer
- Leadership Development Course
- Process Hazards Analysis Leader's Course
- Analytical Troubleshooting Kepner-Tregoe
- Incident Command System Training
- Dupont Safety Management Course
- DNV Accredited Safety Auditor's Course
- DNV Modern Safety Management Course
- Practical Guide to Loss Management Course
- 3M Respirator Trainer the Trainer Instructor's Course
- Hazmat WHMIS Train the Trainer Course
- OH&S/Environmental Due Diligence Course
- Prime Contractor's Role Course
- Industrial Scientific Instrument Maintenance and Calibration Course
- Dale Carnegie Course
- Claims Management Course (WCB)
- Claims Appeal Process Course (WCB)

- Behavior Safety Management Course
- Fall Arrest Trainer Course
- Tap Root Investigation Training

PROFESSIONAL AFFLIATIONS

- President of the Alberta/NWT and National Board Member of the Canadian Society of Safety Engineering 1999-2005
- Chapter chair of Fort McMurray Chapter of Canadian Society of Safety Engineering 1992 1999
- Association of Canadian Registered Safety Professionals (CRSP Designation)
- American Society of Safety Engineers since 1995
- Alberta Construction Safety Association since 1992
- Construction Owners Association of Alberta since 2001
- Board of Canadian Registered Safety Professionals Board Of Governors

Peter Germann

POSITION

Materials Manager

SUMMARY

Peter has been a part of the Valard team for 7 years

EMPLOYMENT HISTORY

Valard Construction LP

Calgary, AB 2005 - Present

Supervisor

- Northern Transmission Line, BC
- 400 Km, 1100 structure 1 cct tower line
- Initiate start up activities including: material yard layout and camp set up, develop resource plan for manpower and equipment for receiving, handling, and hauling activities
- Coordinate material deliveries to main yard and remote lay down yards
- Set up inventory management system and business processes developed on the BXM line including implementation of accounts payable and purchasing processes.

Materials Manager - Bruce to Milton, ON

- 400 Km, 720 structure 2 x cct 500 kV tower line
- Developed materials processes
- Purchased and implemented a materials management system
- Through standardizing processes and the system, the materials team was able to virtually eliminate material delays for construction crews due to material issues.
- A planning model was developed which coordinated materials activities with construction which resulted in balanced inventories, minimized hauling and unnecessary handling of materials

Hydro One

Ontario 1998- 2005

Manager of Customer and Business Services

- Refinement of business processes focused on unique elements of the customer community
- Project management targeted on the contractor community

Zone Coordinator

- Re implement lines scheduling to six Ops Centres and realign scheduling department to enable work flows as per current business process
- Review touch points with Field Business Centre staff to align the business flows with the scheduling processes
- Leadership role in the provincial coordinators forum in the development of:
 - Contract Management training for provincial lines
 - Contractor work flows
 - Consolidated contractor payment process and account redistribution, as well as process support for other zones as requested
 - Development of the scheduling technician duties to align with the Project Managers role
 - Development of H1 specific Project Management course for Scheduling Techs, UTS and ADET
 - Development of Estimating Technical training package targeted at zone needs
 - Implementation of Estimating Technician scheduling in Z2
 - Implementation of Meter Technician scheduling in Z2
 - Development of Project Manager role to leverage "lessons learned" from variance reviews on project work

Process Development Team Lead

- Responsible for continuing with the work begun by OPEX on the development and implementation of process specific to Provincial Lines. Main assignments were:
 - Develop and implement Lines Scheduling (projects/program) assuming work done previously by a team working parallel to OPEX and using systems previously selected by that team
 - Develop and implement Line Scheduling for demand work
 - Develop and implement the Estimating Tool and ensure compliance with the Distribution Service Code
 - Develop and implement materials processes for demand and project work
 - Work with Zones to develop issues teams and work through issues of a provincial nature and communicate solutions through key contact groups
 - Develop communication and change plans for leadership groups to assist in move staff through significant changes
 - Conduct regular issues meetings with the coordinators to work through scheduling related issues including fleet and materials

Operational Excellence (OPEX)

- The focus of this project was process re-engineering with two different job titles:
 - Provincial Line Representative on the New Connect Team resulting in the re-engineering of the New Connection Process based on customer feed back
 - Implementation Coordinator upon re-engineering of that division

Implementation Coordinator PEP Project

- Implementation of the Work/Asset Management Systems (Passport)
 - Alignment of training with the staff requirements and coordination of training sessions and related logistics
 - Project management- conduct daily meetings with the various development teams and work through issues, set priorities and status milestones
 - Develop a Help strategy for field staff and make it operational to coordinate with the system
 - Coordinate the deployment of the system to the field sites across the province

Implementation Coordinator Customer Service System

- Implement the newly developed Customer information system in the field
 - Communicate and change management issues pre and post implementation
 - Conduct mock- ups of conversion activities across the province
 - Coordinate field training and site support
 - Assist in the transitioning from project to live operation including sustainment activities
 - Safety Inspector during the ice storm to perform crew inspections and provide focus on the ever changing safety issues throughout the rebuild of the distribution system

- Change Management Skills-Conestoga College
- Facilitation Skills-Conestoga College
- Effective Speaking-Conestoga College
- Management by Objectives and Results-Conestoga College
- First Line Supervision Motivation and Leadership- Conestoga College
- Hydro One Electrical Awareness
- Quanta (PISUP)
- Valard Construction Orientation
- Achieve Program
- Safety Meeting Effectiveness

- FLM Development Program
- Project Management
- Effective Supervision I, II, III.

EDUCATION & OTHER TRAINING

Project Management (Generic and H1 Specific) - Conestoga College

Nalin Mistry

POSITION

Project Controls/Scheduling and Planning

SUMMARY

- Dynamic, self-motivated & energetic professional, with bachelor's degree in engineering and having around 32 years of versatile experience in the field of Construction/Project/Contracts Management and Construction for the full project cycle, including procurement.
- OSPE Ontario Society of Professional Engineers Resident Associate Membership # 0140922.
- PMI Membership, Membership ID: 1747595.

EMPLOYMENT HISTORY

Valard Construction LP Calgary, AB 2010 - Present

Project Manager / Quality Manager / Assistant Project Manager

- 160 Million (Electrical Portion only) as Assistant Project Manager, Bruce to Milton Transmission Refurbishment Project, Hydro One Networks Inc.
- 9.4 Million (Electrical Portion only) as Project Manager & Quality Manager, 230kV Transmission Line & Switchyard- Design, supply, installation & commissioning.
- 9 Million as Quality Manager, HRTD Bundle T7 Transmission Line Construction, ATCO
- Coordination of the project regarding project aspects by acting at the interface of Client, Consultants and Construction team
- Review / follow-up / initiate incoming and outgoing correspondence between all concerned parties (Client, Consultants, Suppliers, Sub-Contractors, etc.)
- Risk Management
- Assist in Review & update of Construction Schedule

- Change Order Management:- Identify & initiate Change Order Items with Clients for Contract Amendment
- Overseeing the entire Quality Management Program.
- Review progress, preparation of invoices & follow up for the payments

Varcon Construction Corporation Pickering, ON

2010

Project Manager

- Rosebank Sanitary Sewage Pumping Station & Forcemain, Pickering, ON
- Woodstock Art Gallery Renovation, Woodstock, ON
- Coordination of the project regarding all project aspects by acting at the interface of Client, design consultants, Sub-contractors & other vendors & suppliers
- Review / follow-up / initiate all incoming and outgoing correspondence between all concerned parties (Client, Consultants, Suppliers, Sub-Contractors, etc.)
- Risk Management
- Participating on the entire Quality Management Program
- Review & update Construction Schedule
- Review, follow up and expedite all submittals & shop drawings
- Maintaining Logs (Change logs RFI & CCN logs, Submittal log, Site Instruction log etc.)
- Technical and commercial comparison & negotiations with Vendors and suppliers, finalization of Letter of Intents, Sub-Contracts, Purchase Orders, expediting the material deliveries
- Change Order Management:- Identify, initiate and negotiate Change Order Items with Clients for Contract Amendment
- Review progress, preparation of invoices & follow up for the payments

North America Construction Ltd

Ontario 2008 - 2010

Project Manager

- 46.78 Million Water Treatment Plant Expansion, Thunder Bay, ON
- 58.54 Million Water Pollution Control Plant, Secondary Sewage Treatment Facilities Upgrade, Thunder Bay, ON
- Approx. 8.00 Million as Cost Control Manager for Enbridge projects at Manitoba & Saskatchewan
- 271 Million as Assistant Project Manager, Bruce to Milton Transmission Refurbishment Project, Hydro One Networks Inc.
- Coordination of the project regarding all project aspects by acting at the interface of Client, design consultants, Project Management Consultants, Sub-contractors & other vendors & suppliers
- Review / follow-up / initiate all incoming and outgoing correspondence between all concerned parties (Client, Consultants, Suppliers, Sub-Contractors, Lawyers etc.)
- Risk Management and Claim Management
- Working with Quality Manager towards successful implementation of Quality Management Program.
- Review of Construction Schedule, guide Scheduling Team for proper sequencing, forecast cost to completion
- Technical and commercial comparison & negotiations with Vendors and suppliers, finalization of Purchase Orders, expediting the material deliveries
- Change Order Management:- Identify, initiate and negotiate Change Order Items with Clients for Contract Amendment
- Review progress for preparation of invoices & follow up for the payments
- Dispute resolution as related to the Warranty & deficiency issues on Thunder Bay projects
- Take appropriate action on the Request for service (RFS) received for warranty/defects during the maintenance period
- Follow up suppliers and sub-contractors for material/parts/work related to the RFS

AMAN Building Corporation

Edmonton, AB 2007 - 2008

Project Manager

- Renovation Aurora Charter School, Edmonton, Alberta, Canada
- PowerComm Inc.: Office & Warehouse building at Edmonton, Alberta, Canada
- Country Hills Toyota: Car show room expansion, Calgary, Alberta, Canada
- 102 Street Condominiums, Edmonton, Alberta, Canada
- Overseeing the projects as Single point contact
- Coordination of the project regarding all project aspects by acting at the interface of Client, design consultants, Sub-contractors & other vendors & suppliers
- Review / follow-up / initiate all incoming and outgoing correspondence between all concerned parties
- Attending pre-bid and regular Site Visits & Pre-award meetings, chair various progress meetings and preparation / review / finalization and approval of minutes of meetings
- Overseeing the entire Bid process, material & manpower pricing, direct/indirect overheads, finalization of technical & commercial bid packages, submission and negotiation with Clients
- Follow up, expedite & Review of contractor and sub-contractor submittals (drawings, data sheets, other submittals etc.) as per Contract schedules and check compliance with the specifications and the scope of works
- Preparation of Construction schedules, Expediting and tracking planned progress / schedule vis-àvis actual and suggest remedial measures, if needed to ensure that all milestone are met as per the Contract
- Preparation of all Requests for quotations (RFQs), Purchase Requisitions (PRs), Draft Purchase Orders.
- Technical and commercial comparison & negotiations with Vendors and suppliers, finalization of Purchase Orders, expediting the material deliveries to meet overall schedule
- Change Order Management:- Identify, initiate and negotiate Change Order Items with Clients for Contract Amendment
- Review progress for preparation of invoices & follow up for the payments

Saudi Arabia

BI-3178 and BI-3179: SGP & UGP Sulfur Plants Upgrade, Saudi Aramco
 L/G Coalescer @ PP (Polypropylene) Plant at Tasnee Petrochemicals, Jubail

Nalin Mistry - 2

2003 - 2006

- K. O. Drums @ PDH (Propane Dehydrogenation) Plant, Tasnee Petrochemicals, Jubail
- Pre-Feasibility Studies for PET, Ammonia/Fertilizer Plants and Caustic Soda Plants
- Complete Bid Process (Technical & Commercial Proposals) for the following projects:
 - Saudi Aramco Req. # 3000096118: DR-1 Abqaiq Pump Station at Abqaiq GOSP5
 - Saudi Aramco Req. # 3000088594: Intrusion Detection & Assessment System Replacement (IDAS), Ras Tanura Terminal
 - Saudi Aramco LSPB BI-10-03093: Replace Pump Stations 4 & 5, Abgaiq Plants
 - Sharg 3rd Expansion Project, Jubail: Contract # 07/1795: Tender for Building Works
 - Tasnee Petrochemicals: Installation & Commissioning of Silane Feed Pumps
 - Tasnee Petrochemicals (Reference: MOC-2004-UTL-0028): Modification of 28 inch Sea Water Pump Minimum Flow Pipeline
 - Tasnee Petrochemicals (Reference: MOC-2004-UTL-0035): Modification of 72 Inch Sea Water Return Line Header
 - Dammam Port: Supply & Installation of Perimeter Security Fence, Surveillance Cameras, Intrusion Detection System & Lighting Units

Al-Othman Consultants

Saudi Arabia 1994 - 2001

Project Engineer, Construction Manager & Quality Auditor

- On & Off-site management of large residential & commercial construction projects
- Working with owners, architects & consultants regarding all project aspects, co-ordination between various contractors and agencies and expedite sub-contractors as needed
- Tracking construction progress and assured on time project completion
- Responsible for maintaining quality standards and specification compliance
- Overseeing the Quality Management Program
- Review, approval and implementation of all submittals, progress and final billing, contract and owner change orders & change order management
- Conducting weekly progress meetings, preparation of weekly & monthly progress reports
- Auditing of the system on a regular basis, issuance of NCRs and assist closing of the same
- Management meetings and reports & meetings with external auditors
- Instrumental in getting the company ISO 9001 certification
- Interaction with Clients, Architects and Consultants & co-ordination of activities between various sub-contractors
- Preparation of Pre-qualification documents & bid proposals, contract negotiations & finalization
- Execution of projects, scheduling, material & manpower management, finalization of rates for suppliers and sub-contractors
- Material submittals, preparations and follow up of invoices and change orders, change order management

Conwood Group of Companies

Mumbai, India 1992 - 1994

Chief Engineer

- On & Off-site management of large mid & high rise residential & commercial construction projects & co-ordination between various contractors and agencies
- Working with owner, architect & consultants regarding all project aspect, tracking construction progress and assured on time completion, responsible for maintaining quality standards and specification compliance
- Conducting weekly progress meetings at site with Contractors, Architects & Consultants, including
 making agenda, minutes of meetings & preparation of weekly & monthly progress reports and
 presenting the same in person to the Board of Directors
- Review, approval and implementation of all submittals, billing & change orders & change order management
- Expedite sub-contractors as needed
- Overseeing the project quality requirements and participate as necessary

LICENSES & CERTIFICATION

- Dynamic, self-motivated & energetic professional, with bachelor's degree in engineering and having around 32 years of versatile experience in the field of Construction/Project/Contracts Management and Construction for the full project cycle, including procurement.
- Basics of Supervising CSAO, Participant ID 154591
- NAC Supervisory Training Course
- Internal Training for Primavera
- Safety training (for Saudi Aramco & SABIC at Saudi Arabia) including WHMIS at Toronto,
 Canada
- Training Certificate as Internal Quality Auditor, ISO 9001 (FAHSS/TUV)

EDUCATION & OTHER TRAINING

B. Eng. Honors (Civil Engineering) - V.J.T.I., University of Bombay, India, May 1980

Marc Ouimet

POSITION

Senior Manager Lands Forest and Environment

SUMMARY

2009- Present

- With over 22 years of experience managing the right-of-way and environmental aspects of linear projects
- Marc has been a part of the Valard team for over 3 years.

EMPLOYMENT HISTORY

Valard Construction LP Calgary, AB

ROW Manager – OPG/Kiewit Lower Mattagami River Transmission Line

ROW Manager - Northwest Transmission Line for BC Hydro

Project Manager - Toronto Hydro Distribution

Project Manager - ATCO Wesley Creek to Meikle

New double circuit 240kV Steel Tower Transmission Line operating at 144kV

Project Manager - SNC Lavalin SW River Foundations

BP Noel 138kV TX Line

Ouimet Cunningham Consulting and Research 1990 - 2010

President

- Consultant to ATCO Electric 1986-2009

Jody Rideout

POSITION

Project Manager

SUMMARY

- Jody has been a part of the Valard team for over 6 years.
- Experienced in Primavera Scheduling in both maintenance and development of schedules.

EMPLOYMENT HISTORY

Valard Construction LP Calgary, AB 2006 – Present

Project Manager

ATCO NE LOOP Project

Yukon Energy Corp. 138kv TL Stage 2

British Petroleum Major Noel Project 138kV Transmission Line (Engineer, Procure & Construct)

- Managed all aspects of the job preparation including bidding, material ordering, scheduling, construction planning, cost analysis and subcontracts management.
- Continued to manage the project's needs with regard to material, costs, billing, contractual issues, subcontracts, construction, engineering, quality, safety, personnel, equipment and client, public & native relations.

Cloudworks 360kV Tap Rebuild (Procure & Construct)

 Managed all aspects of the dismantling and construction to redirect a 360kV transmission line in to a newly constructed substation including, material orders & management, cost tracking, billing, line design changes, development & monitoring of the safety program and monitoring of the quality program. Job consisted of steel towers, wood pole structures and monopole structures.

Clowhom Hydro Project Powerlines (Procure & Construct)

- Managed all aspects of the construction of two 138kV transmission lines in an isolated area with difficult terrain including, material orders & management, cost tracking, billing, development & monitoring of the safety program and monitoring of the quality program. The work also involved significant line design
- Changes and alternative construction methods that was coordinated with the clients engineering.
 Job consisted of two designs of wood pole, vertical standoff structures.

Dokie Wind Project Powerlines (Procure & Construct)

- Managed all aspects of the construction of a 230kV transmission line and 35kV collector system in an isolated area, over difficult terrain. Job consisted of wood pole, vertical standoff structures.
- Also acted as material and quality manager

Project Manager/Estimator

 Prepared Bid Proposals for various projects, finalizing cost and project details through to submitting the project bid.

Quality Control Supervisor

CNRL 260kV Transmission Line (Engineer, Procure & Construct)

 Ensured the quality of installed items for the 260kV Transmission Line and the two accompanying substations, finally developing the turnover package and providing the client with several complete packages before returning to university for the final year of a BSc.Eng.

Project Assistant

Assisted with project bids and preparing project documents and plans

Project Assistant

Firebag 260kV Transmission Line (Engineer, Procure & Construct)

- Initially joined the project management team in the early stages of the Firebag 260kV Transmission
 Line Project to prepare construction, safety and quality plans, later transitioning o the onsite
 management team to kick start the project and manage contractual, construction and day-today
 project items.
- Managed the majority of aspects from commencement to completion of the contract and administration for the Fort St. John Area Reinforcement Project involving the construction of a 138 kV Transmission Line.

Comstock Canada Ltd.

Fort McMurray, AB

Progress Specialist (ACLS),

- Main responsibility was to assess man-hours and costs for Requests for Information and Engineering Change Notices with relation to work cost changes and Halliburton's Automated Craft Ledger System.
- Preformed various data analysis tasks
- Developed an Excel based complementary craft ledger system to assist ACLS group

Comstock Canada Ltd.

Wawa, ON

On Site Project Coordinator

- Tracked and documented progress which was presented to the client on a weekly basis.
- Developed an Excel based payroll system, and managed the explosives inventory and handling procedures and, with assistance, developed and created the majority of the work procedures catalogue for the project
- Also assisted in multiple areas of the project such as: materials management, helicopter flight management, camp management, computer, network, communication duties, and day to day operations and issues.

Comstock Canada Ltd.

Saint John, NB

Heavy Equipment Operator

 The majority of work consisted of operating a Nodwell 110 tracked vehicle and various other construction equipment.

LICENSES & CERTIFICATION

- WHMIS
- Alberta Construction Safety Association
- Construction Safety Training System
- Electrical & Utilities Safety Association of Ontario's Electrical Safety & Awareness / High Voltage
- Electrical & Utilities Safety Association of Ontario's Hydraulic Aerial Equipment Update
- Canada Safety Council ATV Training Course
- Level one First Aid
- OSSA
- H2S Alive,
- ATV Training,
- CSTS
- BP 4PAC
- Supervisor Training

ADDITIONAL EDUCATION / TRAINING

- University of New Brunswick, Fredericton, NB-Bachelor of Business Administration (BBA), 2002
- University of New Brunswick, Fredericton, NB-Bachelor of Science in Engineering (BSc.Eng), 2008

Joe Rideout

POSITION

Structures Superintendent

SUMMARY

Joe has over 40 years of experience as a lineman.

EMPLOYMENT HISTORY

Valard Construction LP

Calgary, AB 2006 - Present

Supervisor

- Supervised construction of 144kV Double Circuit Overhead Line Construction from Ring Creek to the future Arcenciel Substation.
- Supervised construction of 7L93/7L122 & 7L109/7L64 144 kV Double Circuit Steel Pole Line Construction between the Rainbow Lake Substation and future Arcenciel Substation.
- Yukon Energy, Pelly/Carmacks, Yukon: Construction of 135 kms. of 138 kV H-frame transmission line with extensive helicopter construction, 2008.
- Planned and supervised construction of 260 kV Transmission Line steel lattice towers at the Suncor Firebag site.
- Supervised construction involving the installation and removal of a temporary line and the installation of footing and self-supporting towers.

Comstock Canada Ltd.

Calgary, AB 2004

Superintendent

 Planned and coordinated all construction aspects of the Anjigami and Sault 230 kV Transmission Line.

Greens Construction

Calgary, AB 2002-2003

Superintendent

 Planned and coordinated all construction aspects of a 230kV steel tower transmission line, including the removal of an existing line.

Hi-Line Construction

Paynesville, MN 1999-2001

Superintendent

 Planned and coordinated all construction aspects of a 230kV steel tower transmission line, including the removal of an existing line.

Comstock Canada Ltd.

Calgary, AB 1987- 1998

Superintendent

- Worked on various projects throughout Canada, planning and coordinating all aspects of the construction process
- Worked in Newfoundland, Nova Scotia, Ontario, Manitoba and British Columbia on 138kV, 230kV and 500kV transmission lines with Comstock Canada.
- Worked in Newfoundland, Nova Scotia, Ontario, Manitoba and British Columbia on 138kV, 230kV and 500kV transmission lines with Comstock Canada.

F.A. Tucker

Nova Scotia 1978 - 1987

General Foreman/Superintendent

- Worked in Nova Scotia as a General Foreman on 346kV, 230 kV, 138 kV and 69kV Transmission Lines of varying configurations.
- Worked in Newfoundland and Prince Edward Island as a General Foreman and as a Superintendent on 230 kV and 138kV transmission lines.

BG Checo International Ltd.

New Found Land 1973 – 1978

Foreman

Worked in Newfoundland on distribution and 138kV Transmission Lines

Fischback and Moore

New Found Land 1972

Lineman

Worked at Churchill Falls on 735kV Transmission Line

Worked at Churchill Falls on 735kV Transmission Line

Comstock Canada Ltd.

Calgary, AB 1972

1971

Lineman

Dominion Bridge New Found Land

Lineman

Worked at Churchill Falls on 735kV Transmission Line

- Alberta Construction Safety Association Construction Safety Training System (CSTS)
- Electrical & Utilities Safety Association of Ontario's Electrical Safety & Awareness / High Voltage
- Electrical & Utilities Safety Association of Ontario's Hydraulic Aerial Equipment Update
- Canada Safety Council ATV Training Course
- Oil Sands Safety Association Regional Orientation (OSSA)
- Power Line Safety Hazards Program
- Power System Safety Protection Certificate

M	ike	Ries

POSITION

Project Manager

SUMMARY

 Mike Ries has 25 years of experience in the high voltage discipline from construction, operations, construction management and safety. He has experience in distribution, transmission, substation, and live line construction methods.

EMPLOYMENT HISTORY

Valard Construction LP Calgary, AB

Present

Project Experience Project Manager

- Responsible for the delivery of Project Requirements, Quality Assurance, Safety, and Client Interaction on the following Projects:
- BC Hydro Northwest Transmission Line Project Manager on 350km of 287kV lattice steel line.
 July 2012 present
- Hydro One Bruce X Milton 500kV, Milton Ontario. Project Manager on 180km 500kV double circuit tower line in Mid Western Ontario. January 2011- June 2012
- Project Supervisor
- Responsible for overall safety, daily coordination of men, equipment and schedules. Tracking of LEM's, time sheets, change orders and materials. Construction Management, Quality Assurance, Safety, and Client Interaction on the following Projects:
- Valard Construction, Milton, Ontario. Construction Management for Bruce X Milton 500kV project for Hydro One. May/09-current.
- BCTC/SNC-Lavalin, Harrison Lake, British Columbia. Construction Management for Upper Harrison Terminal Station Project. Construction of 360kV station and associated line work for the interconnection between IPP and BC Hydro. Aug/08- April/09
- Imperial Oil Resources, Cold Lake, Alberta. Construction Management for 11km 144kV and Safety Supervision for new substation. March08/July 08
- Albian Sands Expansion 1, Fort McMurray, Alberta
- 11km 260kV double circuit lattice tower Transmission Line, one Greenfield substation and addition to an existing facility.
- Oct.07/March08

SNC Lavalin ATP Transmission Inc

Construction Manager

Calgary, AB

- Responsible for project safety, construction management, quality assurance and quality control, client interaction and contract management on the following projects:
- Completed a transformer addition to an existing 138kV-25kV substation. Including circuit switchers, protection and controls.
- Encana/Hussar, 44km 138kV Transmission Line, Substation addition to an existing energized facility, and new substation.
- 889L JEEP, AltaLink, Red Deer, Alberta, Canada. Construction Manager for 2.4 km of 138 kV transmission line. Project involved the salvage of 2.4 km of 25 kV distribution replaced with 2.4 km of 138 kV with 25 kV underbuild, .5 km of 25 kV distribution underground and installation of deep ground wells.
- 50 Line Underground Conversions, AltaLink, Calgary, Alberta, Canada. Construction Manager for the conversion of 2.0 km of existing 138 kV overhead transmission line to underground. The project included the installation of a duct bank, splicing vaults, all cable installation and splicing, and five 140 m deep ground wells.
- 123L Rebuild, 14km of 69kV with 25kV under build, continued with another 12km of 69kV rebuild
- 911L Tower replacement, replace two 240kV towers on the banks of the Old Man River
- Three Sisters Mountain Village, 4.5km of 138kV double circuit underground, 3km 25kV underground installed on existing powerline ROW in Canmore, Alberta.

TransAlta Utilities

Power Lineman

- Responsible for the safe operations, maintenance, and construction of distribution and transmission lines
- Up to and including 500kV
- 25 kV rubber glove application
- Hot stick and bare hand methods up to 500 kV
- Implosive training
- Exit-entry from helicopters
- Cellular installation on high voltage towers

R.S Line Contractors

Power Lineman

- Responsible for the safe construction of distribution and transmission lines
- Distribution underground and overhead
- Transmission lines and tower assembly
- Construction of substations

Phel Patton Construction

Power Lineman

- Responsible for the safe construction of distribution and transmission lines
- Distribution underground and overhead
- Transmission lines
- Construction of substations

LICENSES & CERTIFICATION

- Safety First Aid/CPR
- WHMIS
- PIC
- Fire Training
- High Energy Joining (Implo)
- Alberta Construction Safety Training System
- Transportation of Dangerous Goods
- Fall Protection & Tower Rescue
- Level 3 PSSP (BC Hydro)
- Class16 D/L (includes motorcycle)

ADDITIONAL EDUCATION / TRAINING

- 2006-2007 Pursuing the U of A Applied Sciences Occupational Health and Safety Certificate Program. University of Alberta, Edmonton, Alberta, Canada.
- Pursuing ACSA (Alberta Construction Safety Association) NCSO Designation
- Project Management Certificate, Northern Alberta Institute of Technology (NAIT), Edmonton, Alberta, Canada.
- The New Manager I & II, The Write Course for Managers, Red Deer College, Red Deer, Alberta
- Journeyman Power Line Technology Certificate Red Seal, Northern Alberta Institute of Technology (NAIT), Edmonton, Alberta, Canada.

Bill Szumik

POSITION

Eastern Regional HS&E Manager

SUMMARY

Bill has over 40 years experience in all facets of the electrical utility sector with 20 years involved in large transmission station & lines project.

RELEVANT EXPERIENCE

Parkway TS 500kV New Station (Hydro One - 2005) - Toronto, ON

Greenfield construction of a new 500kV station. Installation of new structures, buss, transformers, breakers, etc.

Keephills TS 500kV Station Upgrade (AltaLink – 2010) – Alberta Upgrades to existing buss and structure in a live 500kV station

Hawthorne TS 500kV (Hydro One – 2008) – Ottawa, ON

Installation of new structure, buss, breakers, etc. in a live 500kV station

Bruce x Milton Double Circuit 500kV Transmission Line (Hydro One – 20012)

Greenfield construction of new 2 x 500kV transmission line

EMPLOYMENT HISTORY

Valard Construction LP Toronto, ON 2011 – Present

Eastern Regional Health, Safety and Environmental Manager - Eastern Canada

- Oversee the safety management of all project activities in Ontario
- Prepared the safety component for various project bids.
- Managed WSIB claims and costs for 300 plus staff without a lost time injury.
- Prepared and delivered numerous training programs such as; new employee training and site orientation, WHMIS, Transportation of Dangerous Goods, etc.
- Prepared and delivered over all monthly safety meetings for all groups.
- Vetted all Sub Contractors used on all projects.
- Continued to visit all worksites and corrected unsafe acts in a tactful manner.
- Liaised with all Project Owners in matters dealing with Safety.
- Developed and supervised a staff of 6 safety professionals.

Valard Construction LP. *Milton, ON*

2010 - 2012

Health, Safety and Environmental Manager – Bruce by Milton

- Developed the safety management system for the largest transmission project in North America
- Authored various procedures and Job Safety Analysis's, for tower assembly, erection and stringing of conductors
- Managed WSIB claims and costs for 250 staff without a lost time injury
- Liaised with the Ministry of Labour (MOL) over the course of the project, including numerous site inspections by the MoL, without one order to comply being issued
- Prepared and delivered numerous training programs such as, new employee training and site orientation, WHMIS, Transportation of Dangerous Goods, etc.,
- Prepared and delivered over all monthly safety meetings
- Vetted all Sub Contractors used on this project
- Review various work plans for safety compliance
- Visit worksites and corrected unsafe acts in a tactful manner
- Liaised with Hydro One (project owner) in matters dealing with safety
- Oversaw a staff of 4 safety professionals.

Valard Construction LP Southern Zone Alberta 2009 - 2010

Health, Safety and Environmental Manager

- Championed safety for the southern Alberta which led to a 50% reduction in safety incidents within 6 months.
- Developed and authored a Corporate "High Voltage Live Line Manual" of extremely high quality
- Developed over 35 work procedures for new tasks and revisit old ones for compliance to new legislative requirements
- Initiated new Corporate wide work procedures and incident reporting requirements
- Investigated incidents across Alberta and Manitoba for root causes and prepare reports which are forwarded in a timely manner to corporate, clients, and WCB.
- Prepared and delivered over 40 safety meetings to internal groups.
- Represented the company with various client/customer groups
- Reviewed various work plans for safety compliance
- Visited worksites and corrected unsafe acts in a tactful manner
- Became to "go to guy" for serious accident investigations and detailed comprehensive work procedures

Stantec/Alberci Constructors

Milton, ON 2008 - 2009

Safety Coordinator (part-time)

- Developed various administrative procedures for safety issues for the project management team.
- Reviewed various sub-contractors health and safety programs against best practices and provided a detailed assessment reports to the Vice President for Major Projects.
- Reviewed and analyzed the selected Project General Contractor's safe work procedures and provided feedback to the Vice President of Major Projects
- Developed various power point presentations dealing with the best safe construction practices for the erection of the 500kV circuit
- Provided expert safety advice to various project team members

Hydro One Engineering & Construction 2006 – 2008

Senior Health, Safety & Environment Advisor

- Worked aggressively within the Internal Responsibility System framework to ensure Corporate and Regulatory compliance and due diligence
- Lead Accident Investigator for serious incidents
- Championed for E&CS, Health, Safety and Environment Managed System based on OHSAS 18001 and ISO 14001
- Prepared monthly reports to the Executive Management Team on the safety scorecard, along with Identifying trends and suggesting solutions.
- Provided health & safety expertise to achieve occupational health & safety goals and objectives through participatory management.
- Technical Advisor to eleven (11) Joint Health & Safety Committees within a unionized setting
- Worked in a team environment to ensure environmental due diligence
- Worked with the internal rehabilitation group on WSIB case management to ensure safe and early return to work while minimizing costs
- Active participant or team leader for corporate committees dealing with instituting work procedures, safety management processes, etc.,

Hydro One Engineering & Construction Services 2001-2006

Health & Safety Coordinator

 Provided support and leadership to the E&CS group. Oversaw the safety aspects of large construction projects such as Parkway TS and the new 230kV transmission line from Niagara to Caledonia.

Hydro One Northern Territory and Engineering & Construction Services

Safety Analyst

- Safety support person for maintenance and construction forces in Northeastern Ontario and later for the Engineering & Construction Services
- Part of a team which developed Job Planning folders which were used by all maintenance and construction staff at Hydro One.
- Frequently provided expertise for job planning high hazard projects in live stations, such as Abitibi Canyon GS, unit 1 conversion from 25 cycle to 60 cycle.

Hydro One Transmission Projects 1995-1998

Safety Officer

- Safety Officer for Stations Central, Eastern, North East/West and Saunders GS providing the full range of conventional safety, such as WSIB management, Accident Investigation, JH&SC support, job planning and job safety analysis, etc.
- Championed the introduction of a Safety Management System.

Hydro One Nanticoke GS 1993-1995

1998-2001

Assistant Safety Officer

- Initially looked after Construction forces building the flash ash recovery system along with other minor construction projects.
- Within 6 months became the Acting Station Safety Officer providing support for not only 100 EPSCA trades but also 700 regular staff employed at the coal fired station
- Heavily involved in WSIB claims management and Safety Management Systems development and execution

Other Hydro One Work History 1972-1993

Line Trade

- Involved in all facets of distribution, construction and transmission maintenance including live line work on circuits up to 550kV.
- Team member in the first transmission line re-tensioning project in Northeastern Ontario using helicopters to lower workers onto towers.
- Took ever increasing supervisory roles, Sub-Foreman, Foreman, and General Foreman during this time frame, successfully completing projects with safety, productivity and costs as the prime drivers.

Regional Safety Officer

- Provided and delivered the full range of safety related courses including First Aid, Fire Fighting, Equipment Handling e.g., Forklift, Confined Spaces, etc.
- Recognized signing authority with the Ministry of Transportation signing for driers licence upgrades to internal staff.
- Provided safety support to a large segment of distribution and transmission line forces in Northeastern Region.
- Team or lead investigator on numerous accident investigations using "System Safety" techniques.
- Developed and practiced a Job Safety Analysis format used for high hazard jobs which eventually evolved into job planning folders.
- Guest lecturer at many internal and public venues presenting safety related topics such as electrical safety, etc.
- Championed the introduction of a Safety Management System.

AFFILIATIONS

Member of Technical Standards and Safety Association Provincial technical compliance committee

EDUCATION / TRAINING

- Bachelor of Arts University of Waterloo (through correspondence)
- OHSAS 18001 Essentials Training CSA
- OHSAS 18001 Internal Auditor CSA
- Taproot Advanced Investigation Team Leader Course System Improvements
- Managing Health & Safety on Construction Projects Donahue LLP
- Contract Administration
- Certified JH&SC member
- Standard First Aid
- WHMIS
- Fire Safety
- Electrical Safety Awareness

David Torgerson

POSITION

Foundations & Civil Manager

SUMMARY

Dave has been part of the Valard team for over 5 years and comes with over 20 years of experience.

EMPLOYMENT HISTORY

Valard Construction LP

Calgary, AB 2007 – Present

Construction Manager / Stringin Supervisor

- BXM Reinforcement Project Ontario 180 KM double circuit 500 KV 2010/2011
- Fluor Kearl Lake Project, Fort McMurray Alberta, 39 km 240 KV new construction 2009/2010
- BCTC Cloudworks, Harrison Lake BC, Construction 2 km 360 KV Salvage and Reroute for run of the river project Kiewit, 2009.
- First Nations Energy, Attawapiskat to Kasechewan, Ontario: Construction of 100 kms. of Aerial Fiber Optics, 2008
- Debeers, Victor Mine Project: Construction of 144 kms. of 115 kV Transmission Line through muskeg terrain, helicopter tower erection (Erickson Air Crane) 2008.
- Debeers, Victor Mine Project Construction Earthworks 115 KV Substation Kasechewan Ontario, 2007
- Lineman/operator on 50km of 138kV for the Fort St. John Reinforcement Project
- Debeers, Victor Mine Project: Construction of 170 kms. of 115 kV. Transmission line with numerous lake and river crossings through muskeg terrain, 2007
- Three Sister/ SNC Lavalin, Canmore Alberta: Construction of 5 km concrete duct bank and conductor installation double circuit 138 KV 2007
- IPP/Canadian Hydro Developers Squamish BC: Construction of 7km of 69 KV with extensive Helicopter Construction, and river crossings.
- ATCO, Dover Whitefish, Fort McMurray: Construction of 60 kms. of 240 kV double circuit transmission line with Athabasca river crossings, 2003 – 2004.

Manitoba Hydro.

Glenboro, MB 1999 - 2002

Construction Manager

Construction of 230 kV transmission line from Glenboro Manitoba to the United States border

Arnason Industries

Manitoba 1998

Construction Manager

Construction, Maintenance, and Logistics winter roads Northern Manitoba

Comstock Canada

Manitoba 1997

Construction Manager

135 km winter road construction and maintenance Ilford MB to Oxford House MB

Crocus Construction

Brandon, MB 1992 - 1996

Construction Manager

- Bridge pier resurfacing project, river diversion dewatering and maintenance of diversion
- Various bridge resurfacing projects, machinery moving and telecommunication cable installations.

- Journeyman Power Lineman, Alberta
- Journeyman Power Lineman, Inter-Provincial
- Crane and Hoisting Branch 2 A Boom Truck

MasTec

Transmission Services Canada, LTD

MasTec Transmission Services Canada, Ltd Introduction Presentation February 7, 2014

> Proprietary and Confidential © 2014 All rights reserved MasTec (MTZ)

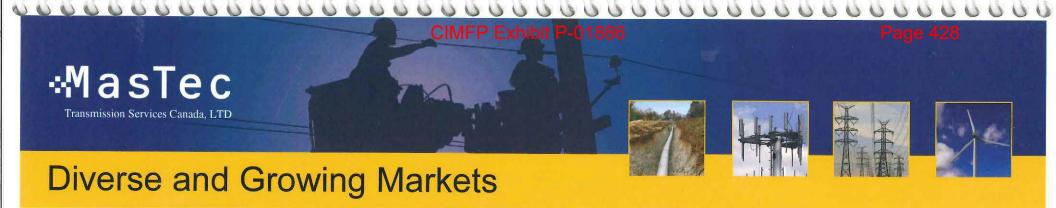

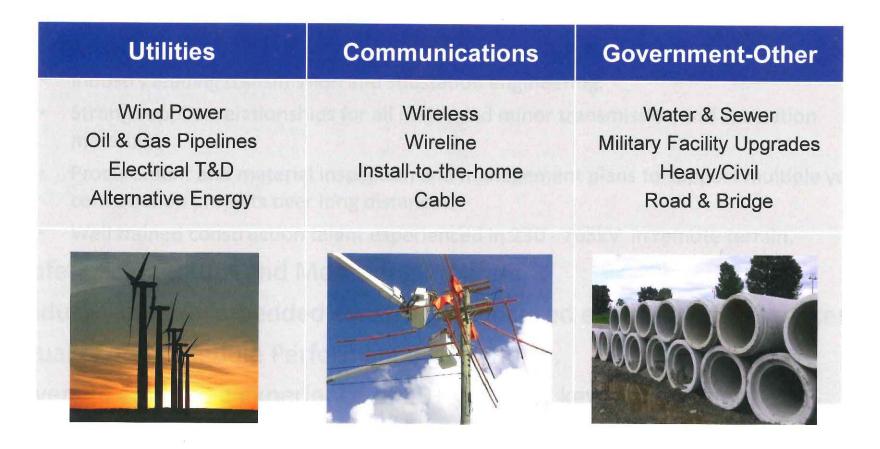

- Large Diversified Utility Supplier
- NYSE traded MTZ, <u>www.MasTec.com</u>
- Top 5 North American Energy and Telecommunications Infrastructure company
- 14,000 plus employees
- Over 240 Office locations US and Canada

- One of largest EPC providers for EHV transmission and substation infrastructure.
 - Industry leading transmission and substation engineering.
 - Strong supplier relationships for all major and minor transmission and substation materials.
 - Procurement and material inspection and management plans to support multiple year construction projects over long distances.
 - Well trained construction talent experienced in 230 765kV in remote terrain.
- Safety First Culture and Mentoring Program.
- Industry unique imbedded construction focused environmental services.
- Quality and Schedule Performance guarantees.
- Average employee experience of 20+ years for key management and supervision personnel.

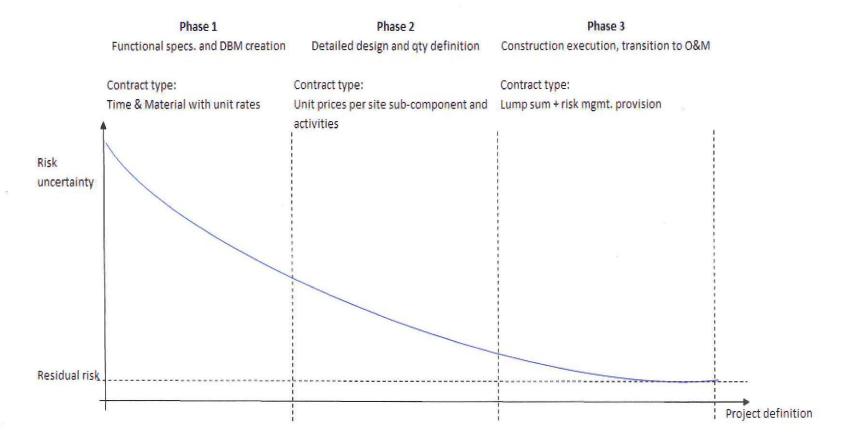

- Engineer, Procure, Construct

Proposed Contracting Strategy

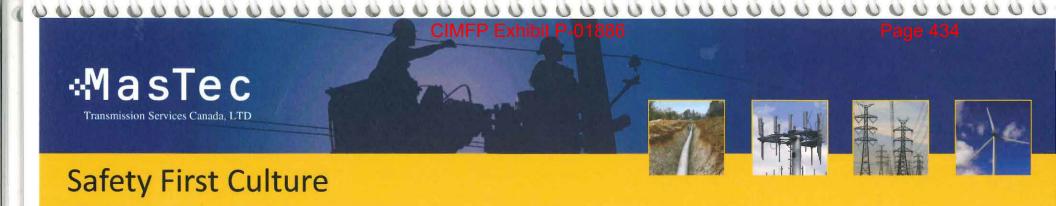

PROGRAM MANAGEMENT Transmission Services Canada, Ltd. Helicopter Aided Construction Environmental Surveying / Geotech / Civil Work / ROW Access / Clearing Testing/Commissioning Local imbedded civil construction resources Foundations Local Foundation Installation Specialists Line Construction Execution Local imbedded safety Local Line Construction resources resources

 $\varepsilon\,2014, Ab\,aghts\,response \,MasTec\,(MTZ)$

- Environmental compliance and mitigation
- Access Roads / ROW clearing
- Complete foundations / grillage / screw piles
- Lattice and pole steel erection
- Helicopter aided tower erection
- Hardware and insulator assembly
- Conductor and OPGW stringing, clipping and sagging
- Helicopter conductor installation operations
- Process Driven QA/QC process
- All construction activities are bound by a Safety First culture and mentoring program

The following Experience Modification Rating (EMR - USA), similar to Canada's TRIF rating demonstrates MasTec' commitment to a progressive and safety focused organization, including full support of management.

• 2009 1.00

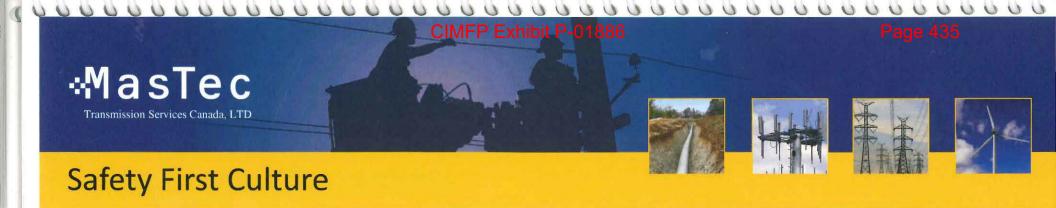

• 2011 0.81

• 2012 0.68

2013 0.68

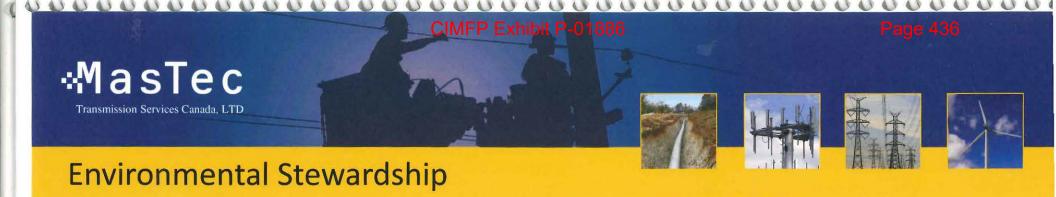

Forward looking, we would also ensure safe project execution by strictly adhering to best practices in Canada as follows:

- CAN/ULC S801: Standard on Electrical Utility Workplace Electrical Safety for Generation, Transmission and Distribution
- OHSAS 18001 Occupational Health & Safety Management System
- ISO 14001 Environmental Management Standard
- ISO 26000 Sustainable Development guiding principles

All Subcontractors will be required to follow our Safety Requirements ensuring strict standards for Safety Performance as part of Execution Strategy.

POLICY STATEMENT

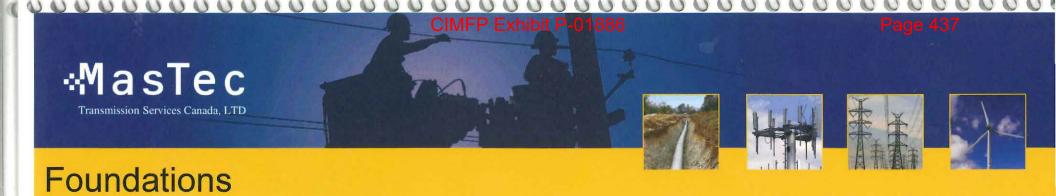

It is the policy of MasTec to comply with all National, Province, and local environmental rules and regulations and to provide an environmentally compliant workplace by integrating environmental management into all work and management practices.

MISSION STATEMENT

The mission of the team's environmental department is to bring environmental awareness, compliance, and excellence of service to all HV and EHV Projects.

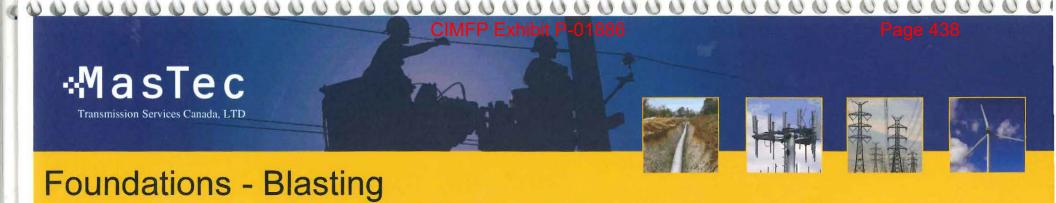

- Perform all types of foundations, including grillage and drilled pier designs(both battered and vertical, lattice and monopole).
- Employing efficiency technology increasing production.

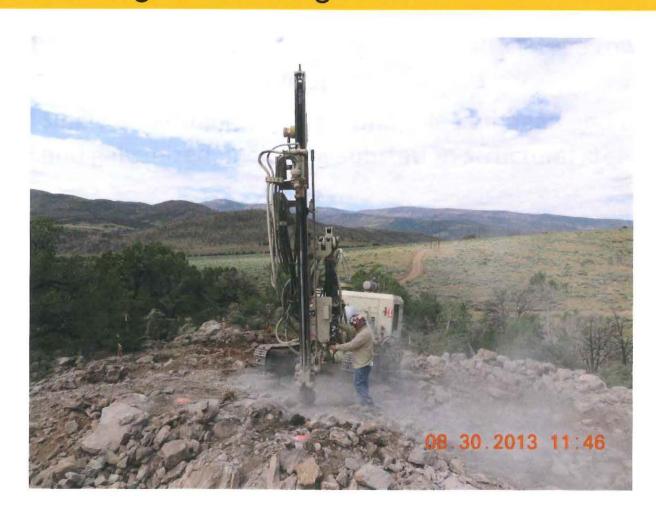

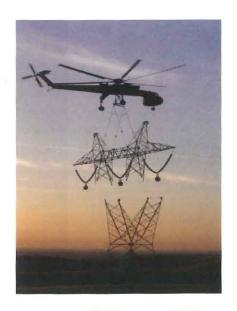

Steel Erection

- Perform all types of steel erection, including all lattice type towers, including remote access with helicopters.
- Erection of single and double circuit monopole and dead end towers, both weathered and galvanized, including substation structural steel.

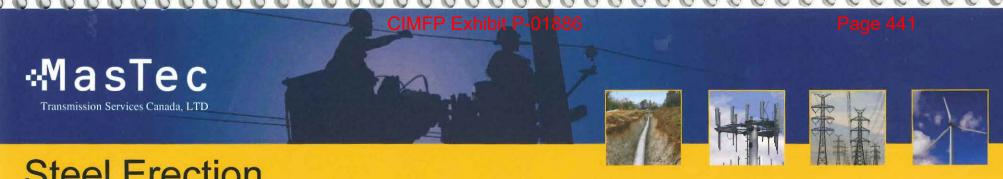

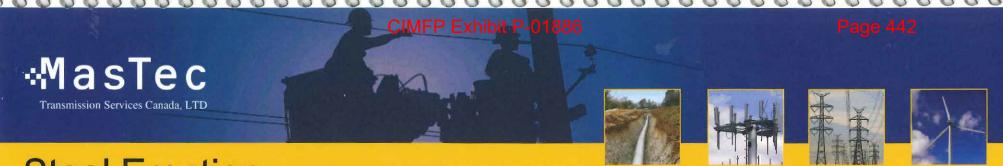

Steel Erection

500kV Lattice steel erection on the 110 Mile EPC Mona to Oquirrh Transmission Line in Utah

Proprietary and Confidential © 2014 All rights reserved MasTec (MTZ)

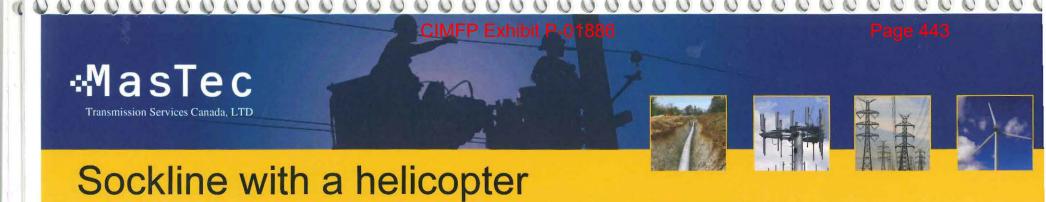

Steel Erection

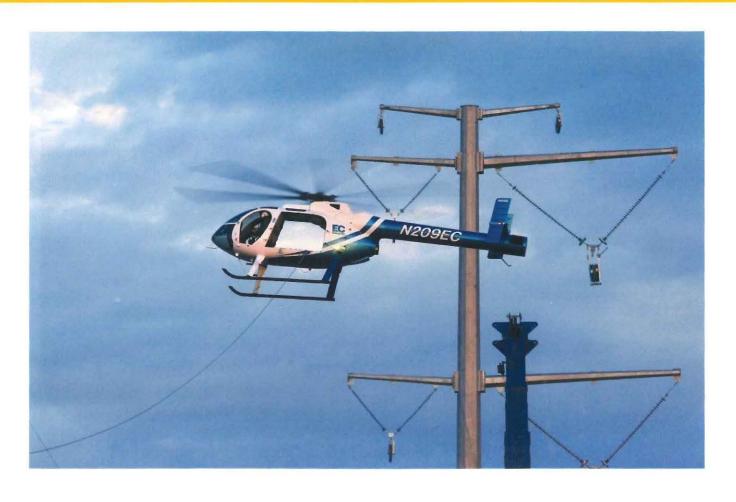

345kV steel erection on the 110 Mile EPC Mona to Oquirrh
Transmission Line in Utah

Proprietary and Confidential © 2014 All rights reserved MasTec (MTZ)

Conductor Installation

Full compliment of multi-bundled conductor and OPGW installation equipment, including wire pullers, tensioners, and stringing equipment.

Material Management

- Strong relationships and experience with all major transmission line & substation equipment / material suppliers
- Establishment of laydown / fly yards
- Material stored or delivered to specific ROW locations
- QA/QC Inspected upon receipt with return of damage material under warranty
- Shop inspections as required
- Material tracking and inventory program from manufacturer to installation
- Experience in safe handling and transport of explosives for blasting and implo connectors

QA/QC Process

- QA/QC is process driven to ensure quality is maintained throughout engineering and construction with integrated test points.
 - Development of a well defined scope-of-work
 - Assignment of qualified staff with appropriate experience level
 - Development of customized QA/QC Plan for each project
 - Customized plan review with designers and client team
 - Oversight by Senior Staff and Management

QA/QC Program

We strive to provide quality materials and exceptional labor for all construction activities. QA/QC personnel will be on site from the beginning to inspect materials as they are received, and file and report independent test data, through field installation. The inspection staff has the ability to direct field crews to stop work if deficiencies are found.

- Vendor / Supplier Facility Inspections
- Concrete Batch Plant Inspections
- Material Received Inspection Reports
- Material Damage Report
- Blasting Report
- Foundation Dimension Report
- Foundation Installation Report
- Foundation Excavation report
- Structure Assembly Report
- Structure Erection Report
- Insulator Installation Report
- Wire Stringing Report
- Wire Sagging Report
- · Wire Clipping Report
- Corrective Action Report

Project Managers responsibilities:

- Risk Management Plan and Risk Matrix
- Safety/ Auditing
- Written scope definition services and facilities
- Challenge and Approval Process
- Contracting understanding key terms and conditions
- Project Control scheduling, cost analysis, etc.
- Change Control
- Kick Off Meeting
- Project Execution Plan
- Project Reviews
- Project Reporting
- Project Documentation
- Lessons Learned
- Project Closeout
- Quality Assurance/ Quality Control
- Communication through a document management system
- Scheduling performed in Primavera P6

- MasTec 2013 Revenues projected at \$4.25B
- Capacity to bond in excess of \$1B
- Letter of Credit Facilities
- Project level insurance with Builder's Risk capacity
- Parental Guarantees
- LD's and other financial disincentives are typical

NDA WITH QUANTA AND OPEN BOOK PRICING MODEL

CONFIDENTIALITY AND NON-DISCLOSURE AGREEMENT

THIS CONFIDENTIALITY AND NON-DISCLOSURE AGREEMENT (this "Agreement") is entered into this _14th__ day of November, 2013, by and between Lower Churchill Management Corporation, a body corporate constituted pursuant to the laws of the Province of Newfoundland and Labrador solely in its own right and not as agent of the Crown in right of the Province of Newfoundland and Labrador, and having its head office at the City of St. John's, Newfoundland and Labrador, Canada (the "Company"), and Quanta Services, Inc., a Delaware corporation ("Quanta"). Quanta and the Company may be referred to herein individually as a "Party" and collectively as the "Parties".

WHEREAS, the Parties contemplate entering into discussions to explore a potential business relationship or transaction involving Quanta or certain of its subsidiaries and the Company and/or certain of its affiliates (a "Business Relationship"); and

WHEREAS, each Party ("Disclosing Party") is willing to provide confidential and proprietary information to the other Party ("Recipient") to assist Recipient in its consideration and evaluation of, and potentially entering into, a Business Relationship.

NOW, THEREFORE, in consideration of the premises hereof and the promises set forth below, the Parties agree as follows:

- 1. <u>Confidential Information</u>. For the purposes of this Agreement, the term "Confidential Information" means and includes information concerning the business and operations of Disclosing Party (including any business, commercial, technical, marketing, financial or other information, whether in electronic, oral or written form) provided by Disclosing Party or its Representatives (as defined below) to Recipient or its Representatives in connection with Recipient's evaluation of a Business Relationship. With respect to a particular Party, the term "Representatives" means and includes such Party's affiliates and their respective directors, officers, members, managers, employees, representatives (including, without limitation, financial advisors, legal counsel, consultants and accountants) and agents. Confidential Information shall also include all analyses, compilations, forecasts, schedules, studies, summaries, extracts or other notes or documents prepared by the Recipient or its Representatives which contain or reflect, or are generated from, any such information provided by Disclosing Party or its Representatives in connection with Recipient's evaluation of a Business Relationship.
- 2. Exceptions. Notwithstanding anything otherwise contained herein, Confidential Information shall not include information that (a) is at the time of such disclosure or thereafter becomes publicly available or generally known, other than as a result of a breach of this Agreement by Recipient or any of its Representatives, (b) is already known to Recipient or within its possession at the time of such information's disclosure by Disclosing Party, (c) becomes available to Recipient from a third party that is not known by Recipient to be in breach of a confidentiality obligation owed to Disclosing Party or any of its Representatives, (d) can be shown by Recipient to have been independently developed by it or its Representatives without use or reliance on the Confidential Information or (e) is approved for public disclosure in writing by Disclosing Party.
- Restrictions on Use and Dissemination of Confidential Information. Recipient agrees not to use the Confidential Information for any purpose other than evaluating and potentially consummating a Business Relationship. Except to the extent required by law, regulation or rule (including of any governmental body, national stock exchange or other regulatory authority) or as otherwise provided herein, Recipient shall not, without the prior written consent of Disclosing Party, disclose the Confidential Information to any person or entity and will protect the confidentiality of such Confidential Information using the same standard of care as Recipient uses with its own confidential information (but no less than a reasonable standard of care); provided, however, that Recipient may furnish Confidential Information to its Representatives who need to have access to such Confidential Information for purposes of evaluating and potentially consummating a Business Relationship, provided that Recipient shall inform its

SPF

Representatives of the confidential nature of the information and shall be responsible for any breach of this Agreement by any such Representatives.

- 4. Ownership and Nature of Confidential Information. All Confidential Information shall be and remain the property of Disclosing Party, and no right or license is hereby or otherwise granted, directly or indirectly, to Recipient with respect to any Confidential Information other than the right to use the Confidential Information in accordance with the terms of this Agreement. Except for any representations or warranties set forth in a final, written definitive agreement, if any, regarding a Business Relationship between the Parties, no representation or warranty is made by Disclosing Party or any of its Representatives as to the accuracy or completeness of any information provided to Recipient.
- 5. Non-Disclosure of Business Relationship. In addition to the foregoing disclosure and use restrictions regarding Confidential Information, each Party agrees that, except to the extent as required by applicable law, regulation or stock exchange rule, it will keep confidential and will not (and will cause its Representatives to not), without the prior written consent of the other Party, make any public announcement concerning the other Party or the Business Relationship or disclose or confirm to any third party the contents, substance, status or existence of any discussions, negotiations or evaluations that are taking or have taken place related to a Business Relationship (including the existence and contents of this Agreement and the fact that Confidential Information has been exchanged between or made available to the Parties).
- 6. Non-Solicitation. Each Party agrees that, for a period of two (2) years from the date hereof, neither the Recipient nor any of its affiliates will solicit for hire any of the officers or other employees of the other Party or any of its subsidiaries other than (i) through a general solicitation for employees (including through the use of newspapers, trade journals, the internet, employment agencies or search firms) in the ordinary course of business consistent with past practice that is not specifically directed at any such persons and (ii) the hiring of any person who contacts the Recipient on his or her own initiative.
- Return or Destruction of Confidential Information. Upon the written request by Disclosing Party, Recipient agrees to, at its option, either return to Disclosing Party or destroy all Confidential Information provided to Recipient by Disclosing Party, including all copies of the same, except for any such Confidential Information that exists only as part of regularly generated electronic backup data, the destruction of which is not reasonably practicable; provided, however, that Recipient and its Representatives may retain one copy of such material to the extent necessary to comply with applicable law, regulation or bona fide document retention policies. Any electronic backup data and other copy of Confidential Information retained by Recipient pursuant to the preceding sentence shall remain subject to all restrictions and obligations contained in this Agreement. Upon written request by Disclosing Party, the fact of any such destruction shall be certified in writing by Recipient to Disclosing Party.
- 8. Required Disclosure. If Recipient or any of its Representatives is required by oral questions, interrogatories, requests for information or documents, subpoena, civil investigation, order, demand or similar legal or administrative process of any court or other governmental or regulatory authority to disclose any Confidential Information, (a) Recipient shall promptly notify (other than where prohibited by applicable law or where such disclosure is required as a result of an examination by a regulatory or governmental agency that is required to keep such information confidential) Disclosing Party of such requirement so that Disclosing Party may seek an appropriate protective order or other relief or waive compliance with the provisions of this Agreement and (b) Recipient or its Representative may disclose such Confidential Information, but only that portion which is legally required to be disclosed.
- 9. <u>Business Relationship; Nature of Agreement</u>. Both Parties acknowledge and agree that unless and until a final, written definitive agreement regarding a Business Relationship between the Parties or their respective affiliates has been executed and delivered, neither Party is under a commitment

J.R.K.

to enter into any agreement, discussions or negotiations with the other Party or to conclude or further pursue or proceed with such a Business Relationship or any other type of business relationship by virtue of this Agreement or any disclosure of Confidential Information, and neither Party will be under any legal obligation of any kind whatsoever with respect to such Business Relationship, except for the matters specifically agreed to herein. Both Parties further acknowledge and agree that each Party reserves the right, in its sole discretion and at any time, to reject any and all proposals made by the other Party or any of its Representatives or any other party with regard to a Business Relationship and to terminate any discussions or negotiations related to a Business Relationship at any time without liability to the other Party other than the obligation to comply with the terms of this Agreement. Nothing in this Agreement nor any disclosure of Confidential Information hereunder creates any agency, joint venture or partnership-relation between the Parties or prohibits or restricts the right of either Party to enter into any business relationship with a third party or use in its services and products any ideas, concepts, methods, expressions, know-how or techniques related to the scope of the other Party's services or products that are not unique to the Confidential Information.

- 10. <u>Remedies</u>. Each Party agrees that, due to the unique nature of the Confidential Information, a breach of this Agreement may cause irreparable harm that cannot be adequately compensated with monetary damages and that, in addition to any other rights or remedies that may be available to Disclosing Party at law or in equity, Disclosing Party will be entitled to seek injunctive or other equitable relief as a remedy for any such breach.
- 11. <u>Securities Laws</u>. Each Party understands, and will communicate to its Representatives who have knowledge of the potential Business Relationship, that applicable securities laws restrict the purchase or sale of securities by any person who is in possession of material, nonpublic information from the issuer of such securities and on the communication of such information to any other person when it is reasonably foreseeable that such other person is likely to purchase or sell such securities in reliance upon such information.
- 12. Term. Unless sooner terminated in a writing mutually signed by the Parties, this Agreement will remain in effect for a period of two (2) years from the date hereof; provided, however, that, with respect to any Confidential Information disclosed prior to such termination date, the obligations hereunder with respect to such Confidential Information will survive such termination for a period of two (2) years from the date of disclosure of such Confidential Information.
- 13. Export Restrictions. Disclosing Party's Confidential Information is subject to all applicable export and import control and customs laws and regulations of the United States, including any associated embargo and sanction regulations, and Recipient agrees that it will not, directly or indirectly, export or re-export such information or any product, equipment or material embodying or made by use of such information to any prohibited destination or country (including the release to nationals of any prohibited country regardless of where such nationals are located) in violation of such laws and regulations.
- 14. No Waiver. No failure or delay by either Party hereto in exercising any right, power or privilege hereunder shall operate as a waiver thereof, nor shall any single or partial exercise or waiver thereof preclude any other or further exercise thereof or the exercise of any right, power or privilege whatsoever hereunder.
- 15. <u>Waiver: Amendment.</u> Neither this Section nor any other provision in this Agreement can be waived or amended except by written consent of the Parties, which consent shall specifically refer to this Section (or such other provision) and explicitly make such waiver or amendment.

JAK.

- 16. <u>Assignment</u>. This Agreement may not be assigned by either Party without the prior written consent of the other Party. This Agreement will inure to the benefit of and be binding upon the parties and their respective successors and permitted assigns.
- 17. <u>Costs and Expenses</u>. Each Party agrees that it shall be solely responsible for all costs and expenses incurred by such Party or its Representatives in connection with this Agreement and its review of the Confidential Information and evaluation of a Business Relationship.
- 18. <u>Severability</u>. Any provision of this Agreement that is prohibited or unenforceable in any jurisdiction shall to the extent permitted by applicable law, as to such jurisdiction, be ineffective to the extent of such prohibition or unenforceability without invalidating the remaining provisions hereof and any such prohibition or unenforceability in any jurisdiction shall not invalidate or render unenforceable such provision in any other jurisdiction.
- 19. <u>Entire Agreement</u>. This Agreement contains the entire understanding and agreement between the Parties with respect to the matters set forth herein and supersedes any and all prior and contemporaneous agreements and understandings between the Parties, whether written or oral, relating thereto. Except as set forth in this Agreement, neither Party will have any obligation or liability, express or implied by law, with respect to trade secrets or proprietary information of the other Party.
- 20. Notice. All notices, requests, demands, declarations and other communications required hereunder or given pursuant hereto shall be in writing and shall become effective (a) if given by facsimile, when transmitted and receipt has been confirmed, (b) if given by registered or certified mail, three business days after being deposited with the U.S. Postal Service, postage prepaid, (c) if given by courier, when delivered by such courier or (d) if personally delivered, when so delivered in person, addressed as follows:

(i) If to the Company:

Lower Churchill Management Corporation, Hydro Place, 500 Columbus Drive P.O. Box 12800, St. John's, Newfoundland Canada A1B 0C9

Attention: Lance Clarke Facsimile: (709) 737-1800

(ii) If to Quanta:

Quanta Services, Inc. 2800 Post Oak Blvd., Suite 2600 Houston, Texas 77056-6175 Attention: General Counsel Facsimile: (713) 629-7639

or at such other address as either Party may from time to time designate for itself by written notice to the other Party.

- 21. Governing Law. This Agreement shall be construed and the relations between the Parties determined in accordance with the applicable laws of the Province of Newfoundland and Labrador and Canada, including any limitation periods, and reference to such applicable laws shall not, by application of conflict of laws rules or otherwise, require the application of the applicable laws in force in any jurisdiction other than Newfoundland and Labrador. The Parties hereby irrevocably attorn to the exclusive jurisdiction of the courts of the Province of Newfoundland and Labrador and Canada for the resolution of any dispute arising hereunder.
- 22. <u>Headings</u>. Section headings herein are included for convenience of reference only and shall not constitute a part of this Agreement for any other purpose.
- 23. <u>Counterparts</u>; <u>Signatures</u>. This Agreement may be executed in two or more counterparts, each of which shall constitute an original and all of which together shall constitute one and the same

J.K.

instrument. It will not be necessary in making proof of this Agreement or the terms of this Agreement to produce or account for more than one such counterpart. Each Party agrees that it will be bound by its own facsimile or scanned signature and that it accepts the facsimile or scanned signature of the other Party to this Agreement.

IN WITNESS WHEREOF, the undersigned have executed this Agreement as of the date first above written.

Open Book Estimate Development Model

05-November-2013

Purpose

 Leverage Nalcor's estimating framework as a collaboration model to develop an open book estimate for the HVdc TL.

Nalcor's Estimating Approach

- Adopt industry recommended practice
 - Association for Advancement of Cost Engineering (AACE) International
- Focus on key cost drivers
- Fully engage project team
- Understand and apply lessons learnt from other projects
- Gather external and independent input

Cost Estimate Components

The Estimators Consider 4 Elements

Definition Factors (Scope) Construction
Methodology
& Timeline
Factors

Price Factors Performance Factors

What is to H be built

How it will be done

Per Unit material / labor cost

Time to complete each work activity

Each Element has Extensive Information Set

Definition Factors (Scope)

+

Construction
Methodology
& Timeline
Factors

30 A

Price Factors

+ Per

Performance Factors

Base Estimate

- □ Design Criteria & Specifications
- ☐ General Arrangements & Layouts
- Design Drawings for major components – towers and hardware
- ☐ MF rock and concrete quantities from 3D CAD
- ☐ Master Equipment List
- ☐ Cable List
- ☐ Material Take-offs for Construction Bulks
- ☐ Equipment Specifications
- □ Geotech surveys
- WBS & Cost Codes

- ☐ Construction Philosophies
- ☐ Construction Execution Plan
- ☐ Constructability Reviews
- □ Construction Schedule
- □ Logistics and Access, incl. freight forwarding & marshaling yards
- ☐ Contract Package Dictionary
- ☐ Org. Design and Staff Plans
- ☐ Construction Equip. Types
- ☐ Labor Demand
- Labor Demarcation
- ☐ In-directs Strategies
- □ Site Services
- ☐ Pre-Fabrication Plans
- ☐ Crane & Access Studies
- Support Facilities
- ☐ Material Sourcing Strategies
- ☐ Seasonality Constraints
- Permit Register

- □ Labor Agreement

- □ Documented Basis of Estimate
- ☐ Foreign Currency Demand
- □ Person hours
- □ Trade demands
- ☐ Cash flows

- Both parties believe that direct negotiations can get to a win-win endpoint for Nalcor and Valard/Quanta.
- Both parties subscribe to collaboratively developing an open book price model with closed book execution
 - Will build up trust between the parties and allow for the mutual discovery of cost saving/sharing opportunities
 - Will allow Valard/Quanta to incent supervisory and workforce performance
 - The contract price structure is expected to be a combination of fixed price and unit rates for foundations - Substantially similar to the current AC contract.
- Both parties will have "skin in the game" exemplified by the appropriate sharing and allocation of project risks.
 - A risk matrix will be collaboratively developed
- Transparency is required by both parties (Nalcor's budget and Valard/Quanta's estimating inputs)
 - Nalcor must be able to explain to its Board of Directors how and why we got to the proposed agreement and why it's a great thing for its customers and shareholders
 - Valard/Quanta must be able to explain to its Board of Directors why this is a fair contract for the amount of resources, market conditions and risk involved

- Each party must show value to respective Boards in order to demonstrate the validity of the negotiating process
 - Safety
 - Cost (1 contractor vs. multiple contractors for multiple sections/segment; leveraging resources from Phase 1 award; leveraging resources (e.g. facilities, equipment, personnel) from Nalcor, etc.)
 - Schedule
 - Risk Management (minimizing surprises and effectively managing project contingency)
 - Capability to complete the overhead portion of the DC Link
- Nalcor needs assurances that there is a cap on their risks
 - We will accomplish this objective through lump sum pricing with targets/unit prices for areas where there are significant unknowns
- Nalcor needs assurances that there will be a commitment from Valard/Quanta for labor and supervisory/management staff on the project.
 - Nalcor is aware that Valard/Quanta has the capability but it is concerned about the capacity to deliver with so many other projects
- Nalcor needs off ramps from 2 perspectives:
 - Valard/Quanta's failure to perform
 - Failure to come to agreement during direct negotiations

Valard QUANTA SERVICES COMPANY QUANTA SERVICES

- Valard/Quanta needs assurances that its price model and estimate will not be shared with competitors.
 - Valard/Quanta will propose an NDA to Nalcor for these assurances
- Valard/Quanta needs assurances that if direct negotiations fail to result in an award then Valard/Quanta will be allowed to bid on all segments of each section and will be treated fairly in the process.
- In the expectation that we are able to come to an agreement, each party is committed to do what we can in parallel (such as the exchange and refinement of contract documents) to expedite the process
 - We will use the contract documents from The AC Line as a starting point for contract development.
- December 1st Visibility into viability of process.
 - Nalcor needs to feel comfortable by December 1st, that it is highly likely that an agreement can be made through this process

- Schedule
 - Flyover
 - Who should be Valard's contact for logistics?
 - Other important dates that we need to be working towards
- Issues or Questions with the process
 - Personnel involve who all is involved?
 - Schedule
 - Vegetation Clearing Scope of Work and Pricing of this Scope of Work
 - Other Technical Questions
 - Other Issues or Questions.

Nalcor-HVDC-16Dec2013.ppt ATT00001.htm

Jason,

The presentation file we presented with on Monday is attached. I've made a couple minor adjustments to reflect discussions with Mark that hadn't taken place due to the weather.

I trust, you'll provide this to whomever needs it.

An email with organization charts will follow.

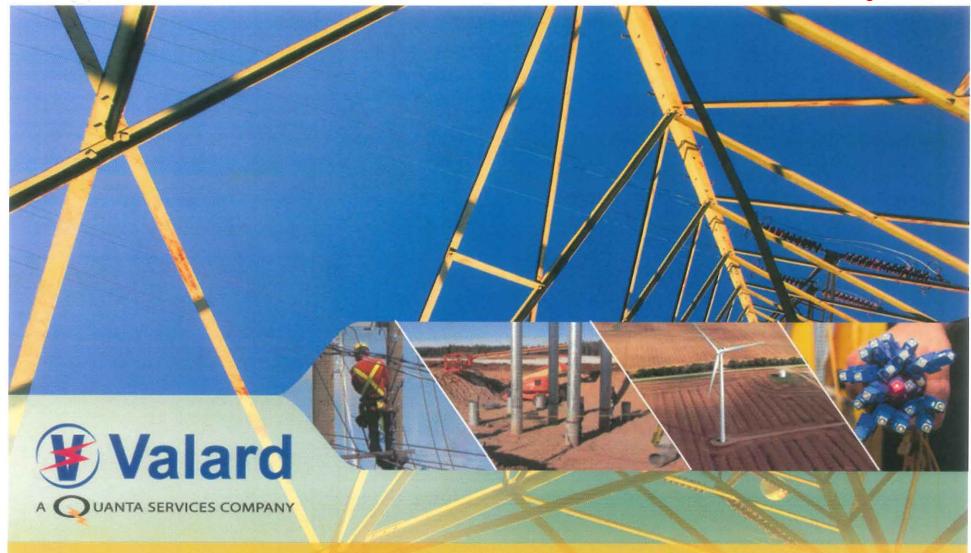

Thanks,

Jody

Nalcor - HVDC Line Construction Dec 16, 2013

Agenda

- Execution Plan
- Management Structure
- The Quanta Team
- Estimate Assumptions

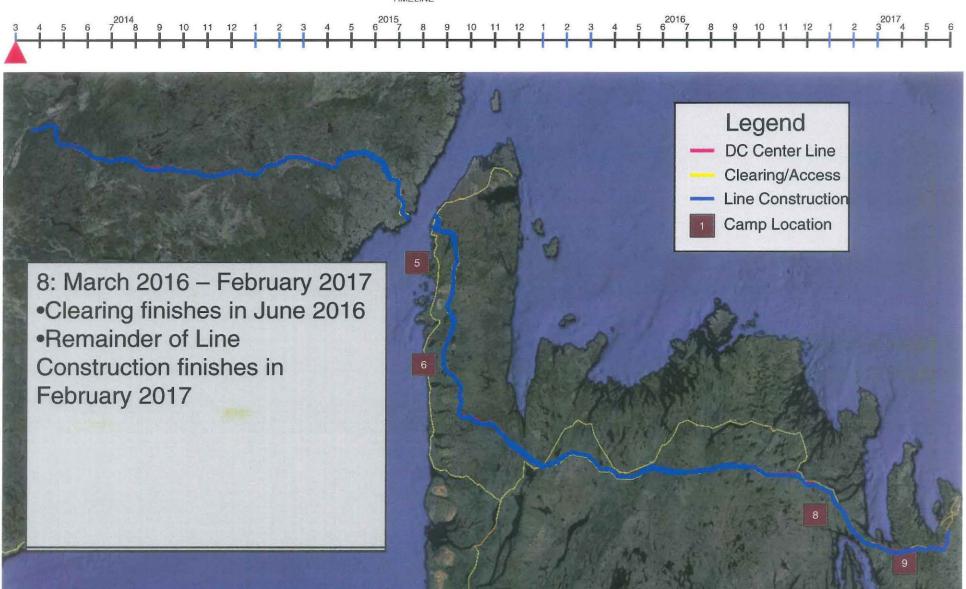

Execution Strategy

- Year round progress across 3 distinct spreads
- Separate management team per spread
- 6 camps deployed to 11 total locations
- Contiguous work fronts = maximum efficiency
- Resource leveled plan reduces camps & indirects
- 18 24 month construction window per spread
- Access and clearing begin April 2014 (spread 1)
- All line construction completed by March 2017

Schedule Overview

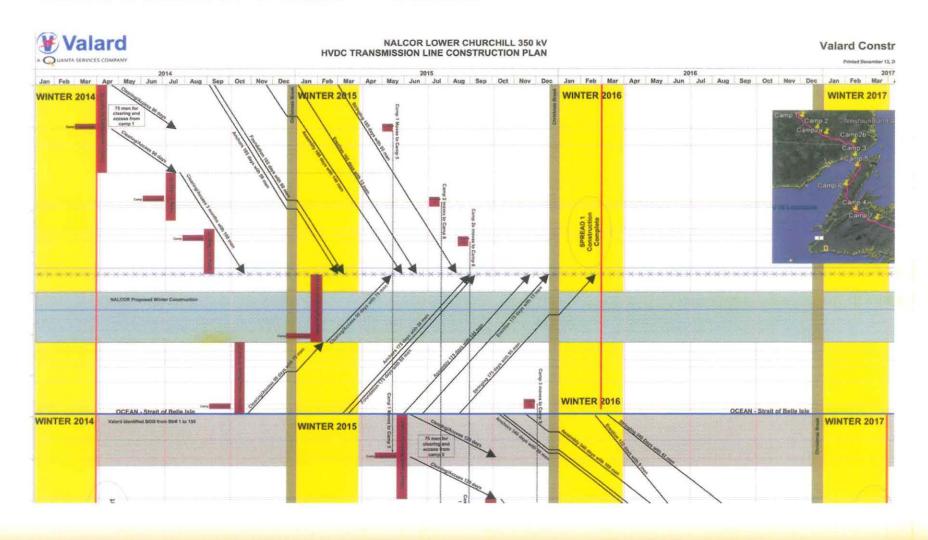

Execution Plan - Tilos

- Reduced Work-Fronts
- Reduction of Camp Resources & Overheads
- Management Efficiencies
- Management Consistencies
- Construction Efficiencies

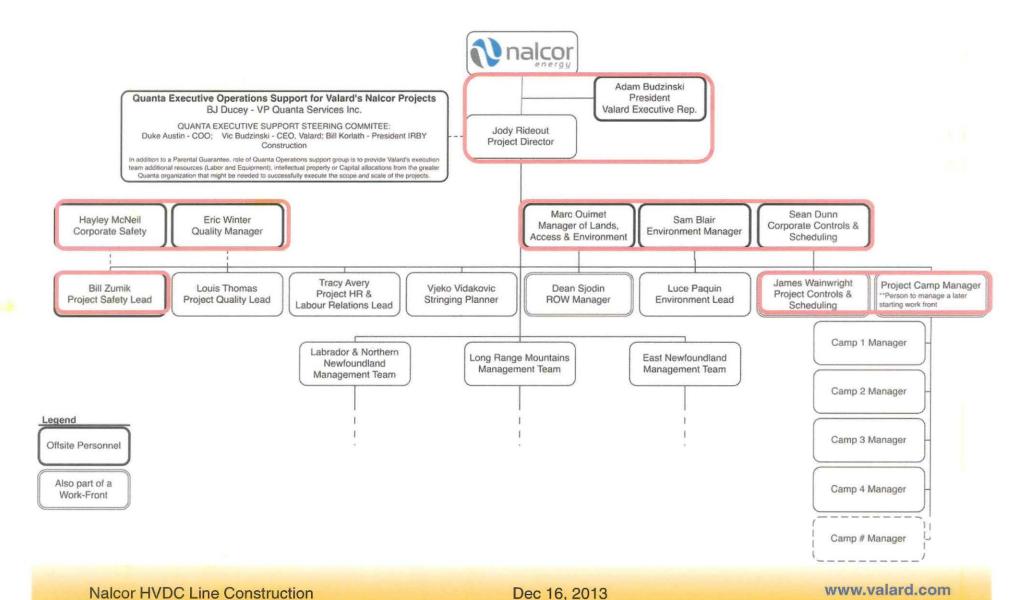

- LRM Fewer, Higher Production Crews
- Quality Program
- Leverage Manpower/Resources Deployed To NL
 - CMs, Supervisors, Directors
 - Opportunity to Grow Skilled Positions
- Safety

Time Off Coverage

Hi Jason,

Please find attached the updated Tilos schedule showing both the AC and DC lines.

Thank you,

Sean

Subject: RE: Actions for HVDC contract - Tilos Schedule

Thanks Sean.

Adam,

It would be useful to have the AC TL overlaid on this Tilos schedule. Is it possible to do this for tomorrow?

Jason

Nalcor 350kV HVdc Clarifications and Assumptions

- 1. Camp Permits Provided early
- 2. 39 month schedule
- 3. Foundation uplift testing not included.
- Material density / strength testing not included. (grout / concrete break tests, Proctor and compaction tests)
- 5. Anchor test to failure not included.
- 6. Foundation uplift testing not included.
- 7. Material density / strength testing not included. (grout / concrete break tests, Proctor and compaction tests)
- 8. Anchor test to failure not included.
- 9. Rock anchor pull testing to failure not included.
- 10. Portland cement based grout / concrete assumed for all locations.
- 11. Rates are valid for 2014. Yearly rate escalation, based on the IBEW project union agreement, is assumed for 2015 through to completion.
- 12. Flagging the right of way is based on offsets from IFC coordinates or receipt of right of way alignment coordinates.
- 13. Legal survey of the right of way is out of scope (exposing survey statutory monuments). This would require a sub contract to a local commissioned land surveyor and we have excluded this from our scope.
- 14. Valard assumes the receipt of stamped IFC coordinates prior to commencement of the project (time of access).
- 15. H-pile foundation pricing is based on the conceptual design and is to be validated once a site specific geotechnical report is completed. The intent is to tie the pricing to the conceptual designs provided and any deviation from these may impact pricing.

- 16. We suggest implementing an H-pile pricing structure similar to the final pricing structure used on the Nalcor HVac project that has various lengths and a splice rate, as this would allow for flexibility when the design is validated.
- 17. Anchor pull testing pricing is based on the availability of a suitable reaction surface being available.
- 18. All referenced contract documents not supplied to date are assumed to be equivalent to similar documents provided with the 315kVac RFP.
- 19. Bridge costs include site plan, engineer, supply & install assume that abutments can be installed using local timber.
- 20. Corduroy road cost only includes supply and installation of corduroy based on maximum haul of 450m and branches left on.
- 21. All drilling and blasting for road construction to be at a cost of \$35/m3.
- 22. Assumed that the entire ROW and permit availability is conducive to road installation.
- 23. Preliminary Geotechnical investigation by others.
- 24. Pricing for item –I2: Design and supply of micropile option as replacement for H-pile design shall be provided upon provision of Geotechnical data.
- 25. Optional Pricing for culverts larger than 600 mm diameter has not been provided as temporary bridges will be more economical.
- 26. Optional Pricing for mulching has not been provided as mulching has been included in the clearing price in all areas where mulching is desirable.

NALCOR 350 kV HVdc Line Construction front 3-Jan 10.pdf

Hello Jason:

We have completed our review of the documents, corrected a few minor errors and have compiled the pricing information for all 3 sections.

The completed pricing documents are attached.

We reiterate our position on confidentiality of this information. This information is released to Nalcor with the understanding that this information shall not be shared with anyone from SNC.

The documents attached expose much of our proprietary bidding process. As SNC is responsible for procuring a significant portion of the transmission line and substation construction work in Alberta, the release of this information to SNC will put us at a great disadvantage.

We also request that, in the spirit of openness and cooperation, any available tower assembly drawings be forwarded to Valard in order that we may verify our tower assembly and installation pricing.

Regards, Joe
