SECTION 1

MUSKRAT FALLS GENERATING STATION AND LABRADOR TRANSMISSION ASSETS

This page intentionally left blank

SECTION 1

MUSKRAT FALLS GENERATING STATION AND LABRADOR TRANSMISSION ASSETS

1.1 PROJECT DATA AND COMMUNICATIONS PROTOCOLS

The Lower Churchill Project ("LCP") is a proposed large, important energy generating and transmission facility of regional and national significance to Newfoundland and Labrador ("NL"), Nova Scotia ("NS") and the federal government of Canada. The project will have a capacity to generate and transmit more than 824 MW of electricity at an initial capital cost of approximately $6B.

The purpose of this report is to provide independent engineer's opinions to support the financing of the LCP using long term bonds secured by net revenues and guaranteed by Canada's best-in-the-world credit worthiness, rated AAA. To that end the report presents professional opinions that the estimated construction and operations costs are reasonable, that the estimated construction schedule is reasonable, and that projected financial results of operations will generate sufficient net revenues to repay the debt, including revenues to meet debt service coverage requirements.

Nalcor Energy selected MWH CANADA, INC. ("MWH") to prepare this Engineer's Report and additional services pertaining to construction monitoring and monitoring services after the Project has been placed in commercial operation. MWH has no financial ties to Nalcor aside from the agreement to prepare this report. MWH has no fiduciary relationship with other firms involved with the LC project or interest in the sale of bonds to finance the LC project.

1.2 PROJECT DATA AND COMMUNICATIONS PROTOCOLS

1.2.1 Contacts

A kickoff meeting was held on September 13 and 14, 2012, in St. John's. Nalcor Energy selected Mr. Lance Clarke, Project Commercial Manager, Lower Churchill Project to be MWH's principal contact during the duration of the Independent Engineer's review and preparation of the Independent Engineer's Report. Additionally, Mr. Ross Beckwith, Nalcor's Commercial Coordinator, is also to be a contract for discussions. Mr. Peter Madden is to be the day-to-day contact for MWH. For all issues pertaining to the Agreement between Nalcor and MWH, Mr. Nicholas Argirov, VP, would be the principal Nalcor contact. Rey Hokenson is MWH's day-to-day contact and is the project manager ("PM") for this assignment. The Agreement between Nalcor Energy and MWH was signed on August 27, 2012.

1.2.2 Documents

On September 7, MWH transmitted a list of documents to be provided by Nalcor Energy for the Independent Engineer's review (Appendix E) The request indicated that MWH wished to receive hard copies of all of the documents that Nalcor expected MWH to review, including two copies of each document along with two CD or DVD discs of the data for further copies to be made by MWH for each of our principal offices in Vancouver, BC and Bellevue, WA. Nalcor subsequently requested that MWH use Nalcor's data room to obtain the information. Because of difficulties encountered in downloading information and to print and save documents for future assessments using the data room, MWH requested an additional system be employed to review data. In response to MWH's request, Nalcor gave permission for MWH to use the Aconex system. The Aconex system greatly facilitated information gathering. Much of the data is protected.. Data is still not available for evaluating. This is principally associated with the Project Pro Forma which has required much additional effort on the part of MWH to conduct their review.

1.2.3 Schedule

Appendix P contains the milestone schedule that the Independent Engineer is currently following to process the work. This same schedule was submitted to Nalcor Energy by MWH in the Execution Plan prepared by MWH and has been tailored to generally fit the Project Milestone schedule (Appendix N) for the preparation and award of the numerous contracts that will be prepared by Nalcor and the EPCM Consultant.

On transfer of data from MWH to the Government of Canada, wherein MWH would be reporting directly to the Government of Canada's representatives, we would expect that new data handling protocols will be developed for MWH to follow and new procedures may be needed to gain access to contracts and other data required for the IE's review.

1.3 PROJECT DESCRIPTION

The history of the LCP dates to the early 20th Century when it was envisioned that a series of hydroelectric projects would be developed on the Hamilton River (now the Churchill River). During the mid-1960s an earnest effort was made to plan for the development of this valuable resource when both the Provinces of Labrador and Newfoundland were in need of power. At that time electric demand was growing by over ten percent per year. The plan was to construct the first project, Churchill Falls, on the Churchill River upstream of the Lower Churchill Project for supplying power to the Island in 1972, and then to construct the Lower Churchill Project following completion of the 5,428 MW Churchill Falls Generating Station; the Churchill Falls Project commissioned its first unit in 1971 to feed power to Newfoundland. The Churchill Falls Project provides about 65% of the power available from the Churchill River, with the remaining 35% coming from two proposed power stations, Gull Island, and Muskrat Falls. Muskrat Falls has been sized to provide 824 MW, while Gull Island has been sized to provide 2250 MW.

The first phase of the Lower Churchill Project (LCP) is to construct a new dam and power station in Labrador at Muskrat Falls; a new 350 kV HVdc transmission line between the Muskrat Falls' switchyard and Soldiers Pond converter station located West of St. John's, Newfoundland, which includes a sub-sea crossing of the Strait of Belle Isle. The Phase I development also provides for the construction by Emera of a new maritime transmission link between Newfoundland and Nova Scotia employing a 180 km-long subsea cable system that allows LCP power to be used in Nova Scotia. This Emera project is not intended to be included in this review by the Independent Engineer.

1.3.1 Muskrat Falls Generating Station (MFGS)

The Muskrat Falls Generating Station consists of several primary components: a Powerhouse with an integral Intake structure; a vertical-gated auxiliary Spillway; an overflow service Spillway fitted to the North RCC dam; a South rock-fill Embankment Dam; a project Switchyard; and protective works located in the left abutment (North Spur) to control seepage. The project will be serviced by a new 21 km access road that connects the project to Highway 510, south of the Churchill River bridge crossing and by a road that connects the North abutment area to Highway 500, Trans-Labrador Highway, to Churchill Falls. The Powerhouse substructure is reinforced concrete with a structural steel superstructure. The reinforced concrete Intake structure, integral with the powerhouse, will be fitted with three service gates and three bulkhead gates, located upstream of the service gates, for each of the four intake bays. The installed capacity of the Powerhouse will be 824 MW with each unit rated at 229 MVA with a 0.9 Power Factor at 39 meters net head.

The Spillway consists of two components: (1) a reinforced concrete five-bay structure, fitted with 10.5-meter-wide by 22-meter-high vertical lift gates, and (2) a 425-meter-long, ogee-shaped overflow roller compacted concrete (RCC) spillway. The spillway sections acting in combination can pass the Probable Maximum Flood of 25,060 CMS at EL 45.1. The overflow Spillway is normally used to pass flows that exceed the Powerhouse hydraulic capacity of 2,660 CMS.

The protective works located in the left abutment include a slurry wall constructed to bedrock to control seepage from the reservoir and local groundwater and include shoreline bank protection to prevent erosion from ice heave and abrasion, and wind-induced waves.

The Muskrat Falls Powerhouse and Switchyard will be connected to the Trans Labrador Highway by an access road located on the South side of the Churchill River.

1.3.2 Labrador Transmission Assets Project (LTAP)

Near the Powerhouse, the Muskrat Falls Switchyard will be constructed to transmit power via two 345 kV HVac overland transmission lines to the 320 kV HVdc Converter Station. Four feeder lines will be used; two feeders will be connected to the converter transformers and two feeders will connect to the filters. These lines are part of the Labrador Transmission Assets project which is 1,100 km long. Each of these lines is to have a capacity of 900 MW.

The Muskrat Falls Switchyard will also connect to the Churchill Falls switchyard that will be extended to accommodate the interconnection from Muskrat Falls and to Gull Island. Two 345 kV HVac overhead transmission lines will be used for this line. Provisions will be made for Gull Island interconnection which are included for later use. One of the lines will have one OHGW (Over Head Ground Wire) and one OPGW (Optical Ground Wire), and the second line will have two OHGWs.

The Churchill Falls Switchyard will extend the existing 735 KV bus with bus coupling circuit breakers. Two 833 MVA, 735-345 kV auto-transformers will be used with tertiary windings rated at 13.8 kV to supply the substation service loads. This extension will be located approximately 500 meters East of the existing Churchill Falls switchyard and will include space for a future 735 kV and 345 kV line feeders. This complex will also include two 735 kV transmission lines, each 500 meters in length to join the existing Churchill Falls Switchyard to the Churchill Falls Switchyard extension.

Twin 350 kV HVdc lines between Muskrat Falls and the SOBI will be used. Again, each line will have the capacity of 900 MW that will allow the Muskrat Fall power station entire plant load to be transmitted on one line. The lines will be carried on lattice steel towers with self-supported angles and dead-ends and with guyed suspension towers. Each of the lines will have overhead lightning protection with one being an OPGW for the operations telecommunication system. Two electrode lines each 380 km long between Muskrat Falls and the electrode station will be employed and will also be mounted on the transmission towers. The Muskrat Falls Powerhouse step-up transformers will be connected to the switchyard using overhead lines supported on steel lattice towers.

1.3.3 Labrador-Island Transmission Link Project (LITL)

This project consists of a converter station located at Muskrat Falls, a transmission link from Muskrat Falls Switchyard to the Strait of Belle Isle (SOBI), 380 km long, a transition station at the Labrador side of the SOBI from the transmission line to a submarine cable, a submarine cable under the SOBI, a transition station on the Newfoundland side of the SOBI from the submarine cable to an overhead transmission line, and a transmission line from the SOBI to Soldiers Pond and a converter terminal station located at Soldiers Pond, West of St. John's. The transition station (compound) at Shoal Cove will include an enclosed building and provision for the submarine cable termination system and associated switching equipment. Also included will be control, protection, and monitoring and communication equipment within the building.

The converter stations at Muskrat Falls and Soldiers Pond will be designed as an automated, remotely controlled facility. The direct current system will be a point-to-point +/- 350 kV LCC bi-pole from Muskrat Falls to Soldiers Pond. During a converter pole outage, the HVdc system will immediately and automatically reconfigure to operate as a monopole, with a metallic return without interruption to the service using sea electrodes installed at Conception Bay.

This project also includes a 350 kV HVdc, 900 MW submarine cable system that will extend from Forteau Point, Labrador, to Shoal Cove, Newfoundland across the SOBI. The offshore component will consist of three submarine HVdc MI cables; one of the cables will be used as a spare. Each of the cables will be installed on the seafloor with approximately 150 meters of separation and all within a 500 meter wide by 34 Km long corridor. Each of the cables will carry 450 MW with a rated capacity of 100 percent overload for 10 minutes and 50% overload for continuous operation. The water depth along the subsea transmission corridor varies between 60 meters to 120 meters. The cables will be protected along the length will a rock berm and the route was selected to avoid ice berg contact. The undersea cables will extend through steel pipe encasements in bored holes to protect the cables in the heavy ice and surf zones. The cables will be trenched underground about 2 meters depth to two transition compounds that will be located approximately 1 km form the land entry locations. The transition compounds contain the cable terminations, switch gear and transition to the overhead line transmission system.

A shoreline pond electrode system will be located on the Labrador side of the SOBI. An electrode system pond will be located on the East side of Conception Bay near Soldiers Pond; the electrode line is 10 km long from Soldiers Pond to Conception Bay. The electrode ponds allow the transmission system to operate as a monopole system if one of the conductors is not functioning.

The Switchyard at Soldiers Pond will inter-connect eight 230 kV HVac transmission lines (four existing transmission lines looped in), and the synchronous condensers and the Soldiers Pond Converter Station. The upgrade at Soldiers Pond will include three new 175 MVAR high-inertia synchronous condensers, 230 kV and 138 kV circuit breaker replacements, and replacement of conductors and reconstruction of eight transmission lines entering and leaving the switchyard.

Information pertaining to the Maritime Link Project to be constructed and financed by Emera will be found in a separate report prepared for the Government of Canada responsible for its financing.

1.4 REVIEW OF CONSTRUCTION PROGRESS

An initial project site visit was scheduled for September 2012, but because of the lack of construction activities pertaining to contracts that MWH would be reviewing as part of their assignment, the site visit trip has been postponed until April 2013. This postponement would also give representatives of the Government of Canada an opportunity to partake in the viewing of the progress of the work to that date with the IE's principal technical representatives in attendance.

Currently there are only two major construction contracts under way, one of them is nearly completed, the contract dealing with the southerly access road. Of about 21 km of access road to be built, MWH understands that it is nearly finished. Additionally, the Bulk Excavation Contract has recently been initiated, but no progress is known on this project, other than the first scheduled blast occurred during early February 2013.

Section 2 of this IE Report will contain observations made during the site visit to be conducted in April 2013. Subsequent discussions between Nalcor Energy's senior representative and the IE indicate that there may be additional site visits due to the Project Schedule and the need and desire to have participation of the Government of Canada.

SECTION 2

SITE VISIT AND OFFICE INTERVIEWS

This page intentionally left blank

SECTION 2

SITE VISIT AND OFFICE INTERVIEWS

2.1 SITE VISIT

As noted in Section 1, paragraph 3, MWH did not visit the site because of the late start due to the delay in Project sanctioning, and lack of work that would be beneficial for the Independent Engineer to view. MWH has tentatively agreed with Nalcor Energy to schedule a site visit in April where we believe that work will be in full progress on the bulk excavation and where the construction camp will also be available to view. Our Agreement with Nalcor requires only one site visit, but during one of our conversations it was suggested by the IE that a couple of more visits be scheduled since this would provide a better opportunity to gauge progress and allow the Government of Canada's representatives to also view the work-in-progress prior to the financial close.

2.2 OFFICE INTERVIEWS

The IE has been forwarding questions to Nalcor that pertain to questions contained in the RFPs and the Contract documents that are being reviewed by MWH. MWH has not had direct contact with any of the contractors or suppliers for the project, but looks forward to holding brief discussions with them during the site visit and also during a meeting (s) in St. John’s to the extent provided in our Agreement with Nalcor.

SECTION 3

PROJECT DESIGN AND PROJECTED PERFORMANCE

This page intentionally left blank

SECTION 3

PROJECT DESIGN AND PROJECTED PERFORMANCE

3.1 PROJECTED PROJECT PERFORMANCE

In the following paragraphs of this section we have included our comments based on the review of the information furnished MWH that summarize our observations to date (March 2013). Additional information has been requested of Nalcor Energy to allow us to complete our review and to allow us to form our final opinions pertaining to each of the subjects included herein. For ease of reference we have highlighted areas still requiring information to be presented.

3.2 PROJECT HYDROLOGY

3.2.1 Spillway Design Flood

For high hazard potential critical structures where loss of life and substantial damage would occur if a dam breach occurred during a flood event or a sunny day event, international standards and those of Canada required that the Spillway be designed to pass the probably maximum flood (PMF). This flood is derived using stochastic methods that estimate the probably maximum precipitation (PMP) in the watershed and then apply this precipitation to the watershed to derive the runoff associated with the PMF. Consultants involved in this effort found that for the Muskrat Falls Project site, the PMF is 29,070 cms. This flood was used to size the capacity of the gated spillway (15,770 cms) and the RCC dam (13,300 cms). Reservoir flood routing studies using the reservoir volume curve and the hydrograph for the PMF determined the resulting maximum flood elevation of the reservoir during a PMF event to be El. 45.1 msl. From this elevation, the deck elevation of the power station was established, considering freeboard requirements.

The IE has not reviewed these studies to give an opinion up to this time (March 2013) but will after receiving the necessary support studies from Nalcor Energy.

3.2.2 Ice Effect on Tailwater Elevation

Ice effects water elevation since water is forced to flow beneath it which results in higher frictional resistance than that generated by an open water surface. A higher water surface elevation for a given flow occurs to overcome the additional resistance. Nalcor performed studies that indicate that ice can expect to form at the site during the months from November to May. The studies indicate, for example, that for a plant discharge of 2,500 cms, the tailwater is 2.0 meters higher when ice cover is present than during the ice free period. This ice-cover condition affects the rated head on the unit by about 5 percent, and, therefore, it must be taken into consideration when computing the power output of the hydroelectric plant. Two tailwater curves were derived for open water and for ice cover which were used in the energy generation

model (Vista Decision Support System—Vista DSS^TM) where the model employs an adjustment factor to shift the curves to accommodate the conditions that are being modeled.

3.2.3 Power Generation

Two models have been used during the derivation studies associated with determining the power generation from the Muskrat Falls (MF) power plant. Both models used a monthly time resolution (time-step); the Vista DSS™ model employs different software and is the preferred model to use for the Lower Churchill project; it uses a more detailed time resolution and a much more detailed representation of the system. The Water Management Agreement for the Churchill River prescribes that the operation of the Churchill Falls (CF) project and the Lower Churchill project must be coordinated as prescribed by the Independent River Operator and includes provisions for banking energy in the seasonal reservoirs at Churchill Falls. The Vista DSS is reported to accommodate these requirements since it is able to route the release Churchill Falls flows that arrive at Muskrat Falls about 3 days later. MWH has not independently verified these results, but other commercially available software, such as the suite of programs available from the US Army Corps of Engineers would allow comparisons to be made if there is a new requirement to do so.

The firm energy capability for the Project is defined as “the maximum annual energy that can be supported by Muskrat Falls during the critical (dry) hydrologic sequence, assuming coordinated operations between the MF and the CF(L) Co’s facilities, as specified in the WMA and while meeting all of CF(L)Co’s obligations from prior agreements.” We note that for each system, the definition of firm energy is specifically defined for it. International standards sometimes require an assessment that looks at the energy that is available for 95 percent of the time or 98% of the time, for example. In the analysis the critical period was determined and for this period, detailed chronologic simulation was performed to determine the Firm Energy capability of MF. The load demand on the Churchill Falls plant was determined based on contractual obligations and by considering the full range of hydrologic variability according to the reports furnished MWH. Excess sales opportunities were also determined, as according to information furnished us, and both load and excess sales were inputted to the firm energy and Average Annual Energy (AAE) analyses.

The average annual energy for the Project is defined as:

> . . . the increase in the average annual generation that can be expected from the Churchill River with the addition of Muskrat Falls, again reflecting the benefits of coordinated operations with the CF(L)Co facilities. The average annual energy is estimated by simulating operations over long periods (of time, sic) and the range of hydrologic conditions, as defined by the available hydrology.

The average annual energy was determined by performing a series of long-term analysis, using a range of Muskrat Falls load demands which were higher and lower than the firm energy demands. The simulations used 30-years of record; the simulations were reported to be

repeated '54 times with a different hydrological sequence each time'. The period of hydrologic record was from 1957 to 2010 where data was used (a period of 53 years). Normally, we advise that the period of record must be at least 30 to 35 years of record before these studies are meaningful, and normally like to use 50-years of record if it is available in determining average annual energy.

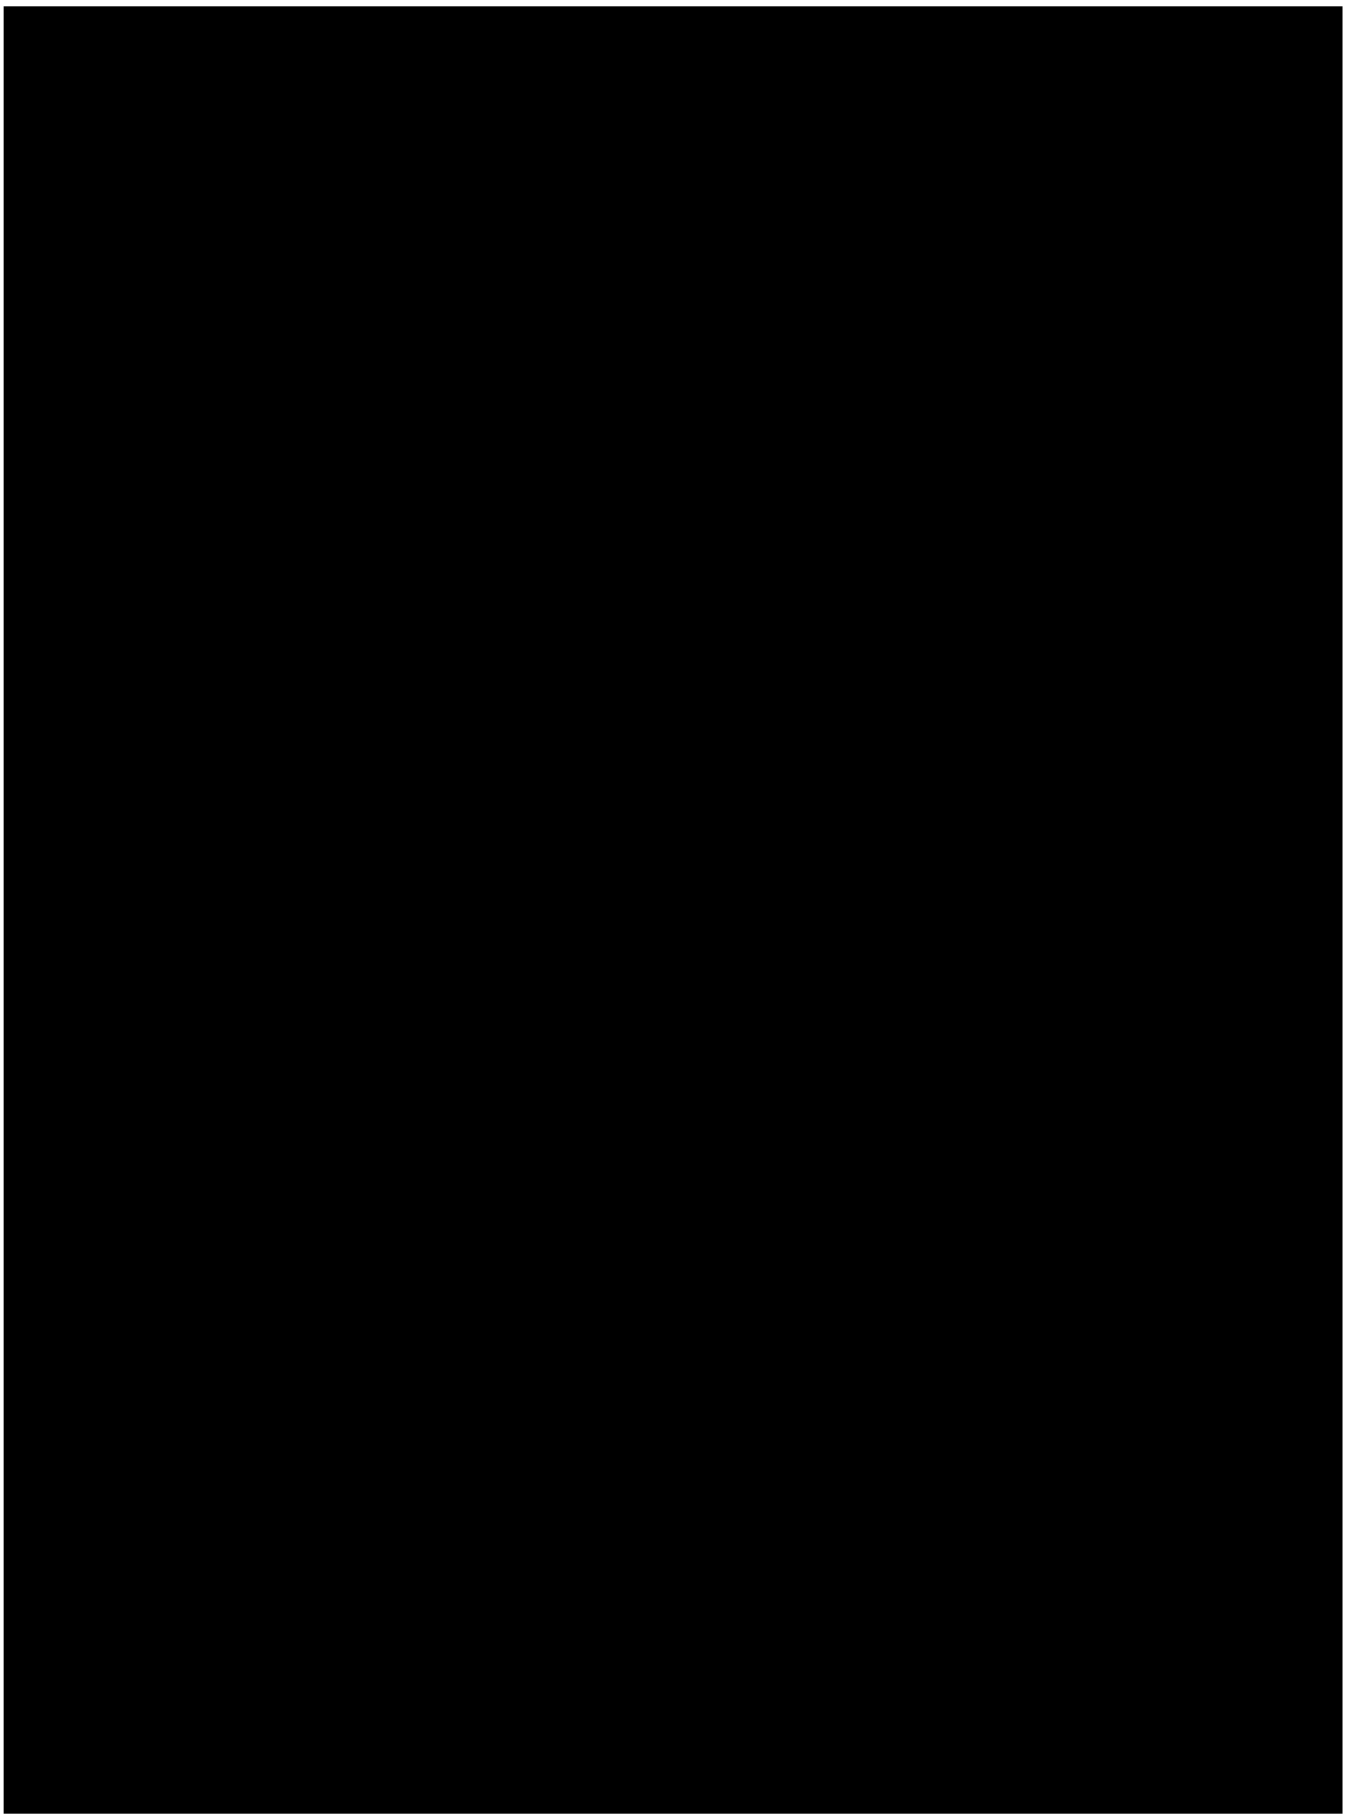
The energy runs also made use of computed headloss equations, relating the losses to the flow squared, and to the guaranteed efficiency of the turbine and generator as it relates to rated head and discharge. This information is presented in one of the documents furnished to the IE that was prepared by Nalcor's consultant, Hatch Energy. The IE has not independently confirmed the values used nor has it separately confirmed the calculated power and energy from the project, however, the procedures followed are typically used in the power generation model.

In order to determine if all losses have been included in the equations used in the model (no back up data has yet been furnished) we have requested that the hydraulic loss computations be furnished to the IE for review. A loss that is typically omitted, or incorrectly derived, is the loss at the exit of the draft tube.

Based on the plots that relate the guaranteed efficiency of the turbine and generator, as noted above, these guaranteed values were used in the model to compute the power. We believe that the guarantee value is that value prescribed in the turbine and generator generating equipment RFP, and not the actual value that Andritz committed to furnish in the contract as their guarantee value. In order for MWH to determine which values were used in the model and to determine if there is a difference between the model values and those guaranteed by Andritz, the IE has requested a comparison table be furnished for review. Normally, the final energy computations are performed using the equipment manufactures guaranteed values to determine the values of power that are used in the pro forma.

The model also provides for periods when the units are shut down that require an environmental flow release that was established for the project. The release will be at the gated spillway structure and is established to be 350 cms. This release, depending on river flows, will remove water from storage and is accommodated in the model to maintain the FSL established for both the winter season and the spring-summer-fall periods. It is not known what reservoir elevation tolerance is provided by the permit to maintain the prescribed FSL for the seasons, but information has been requested of Nalcor to provide the information to the IE.

The results of the power generation runs performed by a consultant (Hatch) are given in Table 3-1, below.



[redacted]

3.3 EXPECTED PERFORMANCE OF MAJOR SYSTEMS

Based on our current understanding of the Project and Nalcor's contracting philosophy, which we have observed in reviewing the RFPs and the Contracts reviewed to date (March 2013), only tier-one fabricators, suppliers and installers of equipment and systems, along with tier-one contractors are being solicited to propose on the work. This philosophy in turn generates competitive responses from these firms who supply the utility-grade equipment required of the specifications. This equipment and systems meet, in our opinion, the intent of the contract's quality requirements and the technical conditions. We, therefore, are currently of the opinion, and with our monitoring of the work during Phase II and thereafter, expect that the performance of major systems and sub-systems will be satisfactory.

3.4 MAJOR SYSTEMS COMPATIBILITY AND COMPLETENESS

We currently (March 2013) have only two contracts available to form a preliminary opinion pertaining to the compatibility of major systems and completeness.

Contract CH0030 involving the turbine, generator, and associated controls for this equipment is being provided by Andritz Hydro, a tier-one company. Andritz has provided numerous equipment packages, and several recent ones for which MWH has direct knowledge being the Owner's Engineer. Based on what has been reviewed to date, without viewing the fabrication, assembly, installation, and start-up and testing, we expect that the hydrogenating package will perform as designed and expected. Since the responsibility of the system compatibility and completeness is Andritz, following the technical provisions of the contract documents, we expect this package will be satisfactory.

Contract LC-SB-003 involving the EPC form of contract delivery for the submarine cable (s) which is directly managed by Nalcor Energy is being provided by one of the three leading designers, fabricators, and installers of submarine cables, Nexans Cable. Based on information know to MWH about other projects Nexans' has completed which are judged to be more difficult than the Strait of Belle Isle cable crossing, we are of the current opinion that their system will be compatible with the land-based transmission systems and their system, and in itself will perform satisfactory and will be complete, as specified.

When additional contracts become available for review, MWH will include remarks about their compatibility with other systems they tie to.

3.5 OPERATING HISTORY OF MAJOR EQUIPMENT

The following Table 3-2 lists major equipment that the IE has reviewed or will review during the Phase I work and comments germane to its operating history.

Table 3-2

OPERATING HISTORY OF MAJOR EQUIPMENT

ITEM NO.	CONTRACT	EQUIPMENT	REMARKS PERTAINING TO HISTORY	COMMENTS
1	CH0030	TURBINE	ANDRITZ WILL MANUFACTURE THE TURBINE; ANDRITZ HAS MANUFACTURED OVER 2000 KAPLAN TURBINES WITH OVER 34 BEING IN THE 8-9.5 METER SIZE RANGE	
2	CH0030	GENERATOR	ANDRITZ WILL MANUFACTURE THE GENERATOR USING COMPONENTS FROM THEIR WORLD-WIDE FACTORIES. ANDRITZ HAS MANUFACTURED OVER 200 GENERATORS IN THE SAME SIZE RANGE 204 MW	
3	CHOO30	GOVERNOR	HEMI CONTROALS WILL MANUFACTURE THE GOVERNOR CONTROL SYSTEM. HEMI HAS MANUFACTURED OVER 500? GOVERNORS FOR HYDRAULIC TURBINES OF THE KAPLAN TYPE	Nalcor is requested to verify with Hemi the number of turbine governors.
4	CHOO30	STATIC EXCITATION	ABB WILL MANUFACTURE THE STATIC	Nalcor is requested to verify with ABB the number of

ITEM NO.	CONTRACT	EQUIPMENT	REMARKS PERTAINING TO HISTORY	COMMENTS
			EXCITATION SYSTEM. ABB HAS MANUFACTURED OVER 200? EXCITATION SYSTEMS FOR GENERATORS OF THE SAME SIZE RANGE AS THE LOWER CHURCHILL UNITS	exication systems for generators of the size range as LC.
5	LC-SB-OO3	SUBMARINE CABLE	NEXANS HAS MANUFACTURED OVER 10,000? KM OF MASS IMPREGNATED INSULATION FOR HVdc SUBMARINE CABLE. NEXANS HAS EXISTED AS A COMPANY FOR 35-YEARS	Nalcor is requested to verify with Nexans the length of MII cable manufactured

NALCOR'S REPRESENTATIVE WAS SENT AN EMAIL ON FEBRUARY 7TH REQUESTING NALCOR'S LIST OF EQUIPMENT THAT IS ACCEPTABLE AND REMARKS PERTAINING TO HISTORY OF EXPERIENCE.

3.6 ELECTRICAL INTERCONNECTIONS BETWEEN PROJECTS

MWH has not reviewed the one-line diagrams for interconnection between projects because they are not currently available for review.

NALCOR'S REPRESENTATIVE WAS SENT AN EMAIL ON FEBRUARY 7TH REQUESTING ONE LINE DIAGRAMS. MWH WOULD ALSO LIKE TO REVIEW SUMMARY A DOCUMENT PERTAINING TO THE ACCEPTABILITY OF NALCOR'S DESIGN INTERCONNECTION BETWEEN PROJECTS.

3.7 TECHNICAL CRITERIA CONSISTENCY

Our current review of the limited number of contract documents and the RFPs that we have been furnished by Nalcor Energy to review provide limited opportunity to opine at this time on the technical criteria consistency. However, it viewing contract CH0030 for the turbines and generators and comparing certain provisions of this contract pertaining to the water conveyance passageways with the finishes required of the concrete surfaces required in CH0007 to cite an example, we find that the criteria are consistent and have been accepted by the equipment supplier as being adequate, assuming that the passageway surfaces will actually be constructed, as required.

We also note that provisions have already been made by Nalcor to ensure that the turbine and generator components will fit with in the pit dimensions used in the RFP/bid documents for CH0007 since they obtained early-on, dimensional requirements from each of the three bidders for CH0030 to help them plan the layout of the power station for Muskrat Falls and included in the drawing package in the CH0007 RFP.

We further note that for contract CH0006, Bulk Excavation, the provisions for excavation have been carefully coordinated with the drawings and contract language found within RFP CH0007, in our opinion, to accommodate a smooth transition between the contract work when it is accepted by Nalcor and transferred to the contractor for CH0007.

We also noted in contract CH0006 that dewatering of the excavation would be occurring after the contractor was granted substantial completion. Nalcor Energy was questioned about this matter and they indicated that they would be responsible for this system that would be furnished to the contractor for CH0007 to allow it to construct the substructure of the power station, intakes and transition structure within its contract. The IE was pleased with Nalcor’s response and find it should allow the smooth transition between contracts to be promulgated.

3.8 EXPERIENCE AND CAPABILITY OF MAJOR PROJECT PARTICIPANTS

Nalcor Energy has advised the Independent Engineer that for all of the major contracts that are currently under design or that have been awarded, a careful screening process was conducted to allow only tier-one contracting groups and suppliers the opportunity to propose on the work. Of the contracts that we have reviewed wherein we have been apprised of the bidders who proposed on the work, we are of the opinion that careful consideration and due diligence to screen prospective bidders has been conducted and that supports Nalcor Energy’s philosophy and statements made to the Independent Engineer.

Each of the contracts that have been awarded to date by Nalcor Energy were awarded to very experienced contractors and suppliers involved in the work. We will continue to monitor the quality of the selected contractors and suppliers and the procedures that Nalcor uses to select from only the best, most experienced, and most reliable fabricators, suppliers and contractors for the Project.

Nalcor Energy also selected a Canadian Engineering firm who has not only prepared numerous designs for hydroelectric projects and other projects in Canada, but worldwide. Following Nalcor's philosophy of project development and management, Nalcor shortlisted only tier-one engineering firms to propose on the ECPM services that were awarded to SNC-Lavalin. Work is currently ongoing with SNC-L transferring key hydroelectric specialists to St. John's but also performing work in several of their other offices in Canada.

Nalcor Energy has also engaged very experienced consultants who have been employed on mega projects in Canada and internationally who are assisting permanent staff but who work solely on the Lower Churchill Project, and who hold key positions of management on this project. The guidance the Nalcor team provides to its EPCM contractor and to the Contractor's they have engaged should allow early detection and resolution of any issues that may or will occur during the construction of the Lower Churchill Project.

CONSTRUCTION PLAN AND SCHEDULE

This page intentionally left blank

SECTION 4

CONSTRUCTION PLAN AND SCHEDULE

4.1 EPCM (ENGINEERING, PROCUREMENT, AND CONSTRUCTION MANAGEMENT) CONTRACT REVIEW

In keeping with the terms of the Agreement with Nalcor, we are addressing the particular items that were specifically requested to be reviewed therein in the following section.

4.1.1 Responsibilities of Parties Clearly Defined

The Engineering, Procurement and Construction Management Services Agreement for the Muskrat Falls Hydroelectric Development between Nalcor Energy and SNC-Lavalin Inc. (SNC-L) is a well prepared and comprehensive contract that clearly places the responsibility for the delivery of a successful project on SNC-Lavalin, Inc., in MWH's opinion. [Opinion on hold; required amendment to SNC-L Agreement pertaining to management authority and scope recently revised late February 2013 requires MWH review]

The EPCM agreement does not give SNC-L the authority to issue any change order, no matter how small it may be, but requires all changes to be submitted to and approved by Nalcor Energy's Project Manager. This process constricts the EPCM process of facilitating quickly, the day-to-day issues by very experienced managers in SNC-L who have many years of hydropower practice experience and appears to be an issue that may cause unnecessary and preventable delays to the project schedule. Experience has shown that on other large EPCM projects, when the EPCM Project Manager is authorized to issue Change Orders up to certain limits, usually provided with a reasonable "cap" to allow the process to proceed more quickly. Change Orders above this amount would be at the authorization of the Nalcor Project Manager. For this project, we would recommend Project Manager be given the authority to authorize $200,000. This would eliminate our initial impression that SNC-L has been given responsibility to deliver the project in a timely manner, but has not been given any level of authority over cost-control.

Major Milestone dates are clearly cited in the Milestone Schedule given in Exhibit 7 of the Agreement and included in Appendix N of this report.

4.1.2 Scope of Work Requirements

Nalcor has included in Exhibit 6 of the Agreement with SNC-L, a listing of documents that clearly define the previous work performed for the project and detail the studies conducted for the project that are available and set out to guide SNCL in their work. SNCL is responsible for all of the work for the design, management (on hold), and construction management services for the power station and transmission system except the work associated with the high voltage DC

cable procurement and installation for the Strait of Belle Isle crossing which Nalcor is administrating (Contract LC-SB-003). Over 110 contracts are the responsibility of SNCL to issue and administer for the work. Key contracts are as follows that SNC-L is responsible for:

CH0007 – Muskrat Falls Complex

CH0030 – Turbine and Generator

CH0006 – Bulk Excavation

CD0501 – Converters and Cable Transition Compounds

CT0327 – 350 kV HVdc Transmission Line---Section 1

CT0346 – 350 kV HVdc Transmission Line—Section 2

PH0014 – Generator Step-Up Transformer

PH0016 – Generator Circuit Breakers

PD0505 – Switchyard Equipment AC Substations CF, MF, and SP

A list of the other contracts is provided in Appendix O of this report for ease of reference by the reader.

Additionally, SNC-L has responsibility for all environmental risks, conditions, law and restrictions applicable to their work and the services as given in Section 10 of the EPCM Agreement (10.1.1). Non-compliance and environmental issues are the full responsibility of SNCL (Section 17).

SNC-L is responsible for obtaining any necessary license, permit or approval for the work under the Agreement, which normally is shared with an Owner, which further places a critical responsibility on SNC-L.

SNC-L is responsible and assumes weather risk up to and including 20-year return period storm events.

The Agreement provides for the following protection of Nalcor Energy:

1. A parent Company Guarantee
2. A Letter of Credit equal to 5% of the Agreement Price ($15 Million)
3. Professional errors and omission liability insurance ($5 Million)
4. Commercial Liability Insurance (limit of $10 Million)
5. Project specific commercial General Liability insurance ($20 Million)

6. Automobile liability insurance ($2 Million)
7. Any Reconstruction Costs incurred by Nalcor ($2 Million)

Based on our experience with other projects of this size and complexity, we would expect to see a performance bond for the full amount of the contract if this project were developed in the USA, or to provide an irrevocable letter of credit issued by a triple A rated Bank (or a Bank of Nalcor Energy's choosing) of at least 25 percent, but preferable 30 % of the Agreement price amounting to about $75 Million dollars. For this reason, it is MWH's opinion that additional coverage should be considered for this mega project.

SNC-L's limit of Liability was fixed at 16 percent of the Agreement price (Section 27.2), or $48 Million dollars which is somewhat low in MWH's opinion.

When a change is required, as ordered by Nalcor, SNC-L has 14 days to respond to the request and is required to furnish a budget and schedule.

The Compensation for changes entitles SNC-L to obtain additional compensation for reimbursable costs and additional fixed fee incurred in relation to the Change Order or Change Request. Changed conditions are clearly detailed in Section 23 of the Agreement, in MWH's opinion.

4.1.3 Communication and Interface Requirements

The Agreement provides throughout the text in different sections pertaining to how the parties will be communicating. Several of these sections are discussed hereafter.

Section 11 allows for Nalcor to conduct performance reviews of SNC-L's work, periodically. Nalcor decides if a Performance Report is required and is delivered after the review has been completed. It would describe any actions that Nalcor directs to remedy any failure in the performance of the Services that is apparent from the review. SNC-L is required to comply and remedy the issues found.

Section 31 discusses Public Communications and the requirements placed on SNC-L regarding project information to the public without the written consent of Nalcor. SNC-L is restricted from addressing any media questions, and must revert to Nalcor for any communications that would take place.

Section 32 clearly spells out, in MWH's opinion, the requirement of the parties in how they communicate with each other as to the following when giving a notice (communication): it must be written; it must be addressed to Representative for the Party to whom the notice is addressed; when issued by Nalcor, it must be signed or authorized by a company representative, a director or company secretary , or duly authorized representative; where given by SNCL, it must be signed or authorized by an SNC-L's Representative, a director or company secretary of the Nalcor, or a duly authorized representative, and be delivered by post, by hand

or facsimile to Party; it must be sent or delivered to the specified numbers and addresses in the Agreement. It also requires that electronic mail can be used for day-to-day communication, but shall not be used to give notice for Claims, Application for Payments and termination. It further notes that verbal communication will not constitute formal communications or notice under the Agreement.

Exhibit 5, Coordination Procedures, spell out numerous details on how the parties must coordinate their respective work through different management practices: Technical Interface; Health and Safety; Quality; Procurement; Contracting and Materials: Cost: Project Change: Risk: Construction: Project Completions; Invoicing and Payment; Province Benefits Obligations and Reporting; Information; Regulatory and Environment; and Schedule Management. MWH opinion is this exhibit clearly outlines he responsibilities of both parties as to how they must communicate as required by the Agreement.

4.1.4 Dispute Resolution Provision Clearly Defined

Defects in the services are required to be rectified by SNC-L as given in Section 26 of the Agreement. When an issue arises, Section 28 of the Agreement would be implemented (Section 28 Dispute Resolution).

Disputes, claims, differences of opinion are handled by the following procedures as given in the Agreement: Party notifies other party in writing within a 30-days of the dispute; within 30-days, parties shall attempt to resolve differences through the Project Change Management Process as given in Exhibit 5, Sections 8 and 9 of the Agreement; if not resolved through the process, parties shall meet at the following levels: most senior managers within 15 days of receipt of dispute; if not resolved by senior project managers, then Project Sponsor level would be required to be involved within 15 days of the Senior Project Managers meeting to discuss; if the dispute is not resolved by the Project Sponsors level individuals, then the issue is addressed by the Chief Executive officers of Nalcor and SNCL with 30 days of the meeting of the Project Sponsors; if the dispute is still not resolved within 120 days from the delivery of the dispute to the other party, the Party filing the dispute may take whatever action is deemed appropriate pursuant to the EPCM agreement.

Based on MWH's review of the resolution process, as described above, it is our opinion that the dispute resolution procedure is satisfactory and appropriate.

4.1.5 Ability to Integrate Each Project with Other Projects

Because SNC-L has overall responsibility for all of the projects except the Strait of Belle Isle cable procurement and installation, and have the organizational structure and authority to monitor the different contracts and with the aid of their critical path schedule to be able to observe where interface issues may arise during the work, we are of the opinion that the contract provides the safeguards necessary to achieve successful integration of the meshing contracts.

The relevant Area Construction manager, who reports to the Deputy Construction Manager and the Procurement Manager would be the individual who would identify delays or issues. The Area Construction Manager in collaboration with the Site Controls Manager would develop an appropriate specific strategy to address the issue(s) and develop the implementation plan to facilitate the corrections.

The integrated planning and scheduling team track and monitor the critical and sub-critical paths within the three projects and the Straight of Belle Isle work. The Planning and Scheduling Team also monitor and track the critical and subcritical paths for the combination of the projects --- interfacing and completions (Ready for Operations) activities. This team also monitors, tracks, and analyzes the contractor-supplied schedules which include the critical and sub-critical paths including key interfaces between each of the contract packages. This activity, according to Nalcor helps ensure the visibility of the interfaces under the responsibility of both Nalcor and SNCL.

The integration of the Strait of Belle Isle crossing work that is being managed by Nalcor and the work that SNCL is performing is led by Nalcor's Project Engineer (Drover) with the marine Crossings Team. Nalcor utilizes the interface management system that is guided by Nalcor's Change and Technical Interface Coordinator (Gillis) for all SNC-L components of the project but mostly with the Nalcor Project Manager DC specialties and the Nalcor Project Manager Overland Transmission. Nalcor also has regular bi-weekly interface meetings with SNC-L in which key personnel attend. Since there are a defined number of interfaces that are well understood and as a result, personnel from both the Onshore and Offshore functions of the Marine Crossing Team are deeply involved with the interfaces as well. MWH concurs that the system to promulgate a successful interface of the work should be able to address the rather limited number of instances where an interface issue would occur and is suitable for its intended purpose of expediting solutions to any issues that may occur during design and construction.

The procurement team is responsible for establishing contracts and facilitating the delivery of the system. The quality assurance function provides the necessary level of shop surveillance to minimize the likelihood of an unforeseen event from occurring. The Project's overall quality assurance program combined with logistics functions is expected to work to minimize losses during shipment or damage to components being shipped.

4.1.6 Potential Legal Issues

Several issues that the IE is aware of have surfaced in the press and in documents published by the World Bank on the issues surrounding the conduct of SNC-Lavalin representatives in Libya, Bangladesh, and in Montreal. Allegations of bribery to win projects and aiding a banned government representative have been raised, with a senior executive of SNC-L currently imprisoned in Switzerland and the former SNC-L CEO arrested in Canada along with several senior representatives of SNC-Lavalin being forced to leave the company because of these activities. A pending billion dollar lawsuit by shareholders of the company is also is being promulgated that alleges the issues surrounding the bribery issues have driven the SNCL stock

price lower, which caused shareholders to lose money. All of this negative publicity associated with these possible legal problems that SNC-Lavalin is facing is required to be surfaced by the Independent Engineer since the outcome of any legal action could affect the performance of the staff assigned to the Lower Churchill Project and the reluctance on part of lenders to offer a more competitive loan(s) to Nalcor Energy. Since the IE cannot give legal opinions nor is required or qualified to comment on the outcome of any findings by the Royal Canadian Mounted Police or the World Bank in their preliminary findings and the investigations currently under way, we will not give any opinions on these matters other than what we have noted above. We have discussed the issue with Nalcor Energy representatives and they recognize the need to present this information to our readers, but have noted to MWH that they are fully supportive of the SNC-L staff they have been working with on the Lower Churchill Project and will continue to work with them, barring any unforeseen issues that surface after investigations by legal authorities have been completed.

4.2 BULK EXCAVATION CONTRACT REVIEW – CH0006

The Bulk Excavation Contract was started on November 9, 2012, shortly before Nalcor Energy received notification that the Project received the Government Sanction on December 17, 2012, since a further delay in waiting for the full Sanction would have severely delayed the start of the contract and the entire Project. Contract CH0006 was awarded to a group of four contractors including the following firms, each of which is well known in Canada: HT O'Connell, EBJ, Nielson, and Kewit. The current contract amount that was agreed to by the parties is $112,942,295.00 (Rev 3). The reader is advised that within this report, all dollars given are Year-2012 and Year-2013 Canadian Dollars, depending on the award date. The Contract Substantial completion date is December 31, 2013.

Since the Independent Engineer, by its Agreement with Nalcor Energy is only required to review certain contracts out of the 113 separate contracts currently identified (March 2013) that Nalcor and MWH believe are the main contracts that need to be reviewed as part of the Independent Engineers Technical and Environmental evaluations, we have developed a standard format that addresses the questions contained in our Agreement task descriptions to standardize our responses. Since additional information is also specifically requested in other Sections of the IE Report, some information may be repeated or expanded, as required by our Agreement.

Table 4-1

CONTRACT CH0006

BULK EXCAVATION

ITEM NO.	DESCRIPTION	OBSERVATIONS; SOURCE IN CONTRACT	REMARKS; QUESTIONS?	OPINION OF INDEPENDENT ENGINEER
1	QUALIFICATIONS OF CONTRACTOR	EACH CONTRACTOR HAS	NALCOR ADVISES THAT THE	CONTRACTING GROUP IS

8	TRANSPORTATION PLAN	5.13 REQUIRES CONTRACTOR'S PLAN; ARTICLE 22 LISTS SITE AND TRANSPORTATION CONDITIONS; 22.3 PLACES SOLE RESPONSIBILITY WITH CONTRACTOR	NO CONTRACTOR'S PLAN WAS AVAILABLE TO REVIEW. SINCE THIS IS THE FIRST MAJOR CONTRACT AFTER ROADWAY CONTRACT, THERE MAY STILL BE AREAS TO IMPROVE FOR HEAVY EQUIPMENT PASSABILITY. SITE ACCESS IS NALCOR'S RESPONSIBILITY UP TO THE CONTRACTOR'S LAYDOWN AREA.	NO OPINION PERTAINING TO TRANSPORTATION PLAN; CONTRACT APPEARS TO DEFINE THE CONTRACTOR'S RESPONSIBILITY SATISFACTORILY
9	LOGISTICS/STORAGE OF MATERIALS	ITEM 45, PERMITS REQUIRES EXPLOSIVE LICENSE AND MAGAZINE; ITEM 50 REQUIRES PERMIT TO TRANSPORT DANGEROUS GOODS	THE SITE VISIT SCHEDULED FOR APRIL 2013 WILL ALLOW VIEWING OF CONTRACTOR'S STORAGE FACILITIES AND ASSESSMENT OF THE SUCCESS OF THE LOGISTICS ISSUES, IF THERE WERE ANY RESULTING IN ISSUES	APPEARS TO BE SATISFACTORY; FINAL ASSESSMENT AFTER THE FIELD VISIT BY THE IE
10	CONFORMS TO INDUSTRY STANDARDS	CONTRACT SEEMS TO BE COMPLETE, HOWEVER, DOES NOT CONFORM TO CURRENT PRACTICE BEING ADOPTED USING ASCE GBRC GUIDELINES FOR GEOTECHNICAL REPORTS	FOLLOWING A CURRENT GUIDELINE ALLOWS FOR A MORE EARLY ASSESSMENT OF POSSIBLE ISSUES AND DEFINES RESPONSIBLE FOR CHANGED CONDITIONS	CURRENT USA PRACTICE WAS NOT ADOPTED WHICH MANY PROJECTS NOW FOLLOW SINCE IT CLEARLY PROVIDES AVENUES FOR RESOLUTION OF ISSUES; HOWEVER,

ITEM NO.	DESCRIPTION	OBSERVATIONS; SOURCE IN CONTRACT	REMARKS; QUESTIONS?	OPINION OF INDEPENDENT ENGINEER
			CLEARLY; RECOMMEND THAT NALCOR AND SNCL FAMILIARIZE THEMSELVES WITH CONDITIONS IN ASCE GUIDELINE TO DETERMINE IF ANY AMENDMENTS ARE NECESSARY TO INCLUDE WITH THE CONTRACT	WITH CLOSE MONITORING AND FAIR INTERPETATION OF CONTRACT, WE JUDGED THIS ITEM TO BE SATISFACTORY. SINCE NO PERFORMANCE BOND OR PAYMENT BOND ARE CURRENTLY REQUIRED TO BE FURNISHED, DOES NOT CONFORM TO USUAL PRACTICE.
11	COMPENSATION TERMS	EXHIBIT 2 INCLUDES MATERIAL PERTAINING TO COMPENSATION AND THE REQUIREMENTS TO OBTAIN		SATISFACTORY
12	GUARANTEEES & LIQUIDATED DAMAGES	ARTICLE 17 PROVIDES FOR WARRANTIES; NO ARTICLE FOR LIQUIDATED DAMAGES IS PROVIDED IN THE CONTRACT	NALCOR ADVISED THAT NO GUARANTEES AND LDS ARE REQUIRED.	IE CAN NOT GIVE OPINION AT THIS TIME, SEE 6. ABOVE. RESULTS WILL BE KNOWN BEFORE FINANCIAL CLOSE AND THE LIKELY IMPACTS ON THE PROJECT SCHEDULE TO ALLOW IE TO OPINE LATER.
13	PERFORMANCE BOND, LDS, BONUS, BUYDOWN/OUT	IN THE RFP, PERFORMANCE BOND: 100% OF CONTRACT PRICE (CORRECTED VALUE FROM 50% RFP VALUE); PARENT GUARANTEE FURNISHED;	DATA IS MISSING AND REQUIRES TO BE ENTERED IN THE CONTRACT WHICH WOULD BE SHOWN IN EXHIBIT 14--- PERFORMANCE SECURITY. NALCOR ADVISED	THE IE REQUIRES CLARIFICATION AS TO WHAT PERFORMANCE SECURITY EXISTS. NO OPINION CAN BE GIVEN AT THIS TIME

ITEM NO.	DESCRIPTION	OBSERVATIONS; SOURCE IN CONTRACT	REMARKS; QUESTIONS?	OPINION OF INDEPENDENT ENGINEER
		LETTER OF CREDIT-15% OF CONTRACT PRICE TO FINAL COMPLETION; 5% TO END OF WARRANTEE PERIOD; EXHIBIT 2, PART 2, SECTION 9; LDS FOR MISSSED MILESTONES; THE FINAL CONTRACT DOES NOT HAVE ANY OF THESE PROVISIONS WITHIN THE DOCUMENT	THAT NO LDS WILL BE ASSESSED BECAUSE OF THE LATE START INCURRED BECAUSE OF THE PROJECT SANCTION BEING DELAYED. IT ALSO APPEARS THAT NO PERFORMANCE BOND, RIDER TO PERFORMANCE BOND, AND PAYMENT BOND WERE REQUIRED TO BE FURNISHED AS PART OF CONTRACT NEGOTIATIONS SINCE THE FORMS HAVE NOT BEEN FILLED IN AND SIGNED.	
14	COMPLIANCE CONTRACTS, PERMITS, PERFORMANCE	PART 2, EXHIBIT 6 PERMIT APPLICATIONS: 14 ARE THE RESPONSIBILITYOF THE CONTRACTOR; OTHERS—THE ENGINEER		THIS ITEM APPEARS TO BE SATISFACTORY
15	GUARANTEE OF EQUIPMENT	NOT APPLICABLE		NO OPINION NEEDED, NOT APPLICABLE
16	CONSTRUCTION SCHEDULE	LOCATED AT PART 2, FOLLOWING EXHIBIT 14; CRITICAL PATH SCHEDULE FURNISHED		SATISFACTORY
17	SCHEDULE REVIEW; ADEQUATE PROVISIONS	SUFFICIENT BREAKDOWN INTO SUBTASKS NOTED; BENCH DESIGNATION USED FOR EXCAVATION		SATISFACTORY

ITEM NO.	DESCRIPTION	OBSERVATIONS; SOURCE IN CONTRACT	REMARKS; QUESTIONS?	OPINION OF INDEPENDENT ENGINEER
18	CRITICAL PATHS	MILESTONE DATES: EXHIBIT 9, PART 2: SUBSTANTIAL COMPLETION DEC 31, 2013; EXHIBIT 3, PART 2, 5.4 CONTROL SCHEDULE BASELINE DOCUMENT; SEE 16. ABOVE, FOR LOCATION OF SCHEDULE IN DOCUMENTS	FROM SCHEDULE, THERE APPEARS TO BE ADEQUATE FLOAT TO ACCOMMODATE ISSUES THAT MAY BE ENCOUNTERED—NEARLY 1.5 MONTHS TIME; THE IE REQUIRES VIEWING THE WORK PROGRESS BEFORE OFFERING ITS OPINION SINCE ACTUAL PRODUCTION RATES MUST EQUAL OR EXCEED THOSE ASSUMED AND USED IN THE CONTRACT DOCUMENTS	NO OPINION OFFERED AT THIS TIME
19	LIKELIHOOD OF ACHIEVING MILESTONES	PROGRESS NEEDS TO BE ASSESSED BY IE DURING FIELD VISIT TO GAGE LIKELIHOOD OF ACHIEVING MILESTONES; SUFFICIENT FLOAT IN SCHEDULE PROVIDED APPEARS TO ALLOW FOR COMPLETING CONTRACT SUBSTANTIAL COMPLETION	IE WILL OBSERVE PROGRESS DURING ITS FIELD VISIT TO ASSESS PERFORMANCE AND LEARN OF ANY ISSUES THAT ARE THEN APPARENT TO FORM OPINION.	IE CAN NOT OFFER OPINION AT THIS TIME. THE IE WILL BE ABLE TO GIVE AN OPINION BEFORE FINANCIAL CLOSE BASED ON CURRENT SCHEDULE.
20	RIVERSIDE COFFERDAM ELEVATION	MWH REQUESTED REVIEW BY NALCOR TO ASCERTAIN COFFERDAM HEIGHT REQUIREMENTS AND A SKETCH		MWH AWAITING TO RECEIVE REQUESTED PLOT OF WATER SURFACE ELEVATION DUE TO ICE JAM AND HEIGHT OF

ITEM NO.	DESCRIPTION	OBSERVATIONS; SOURCE IN CONTRACT	REMARKS; QUESTIONS?	OPINION OF INDEPENDENT ENGINEER
		THAT SHOWS RIVER GAUGES WITH PEAK ICE DAM FLOOD ELEVATION 22 METERS PLOTTED TO ASCERTAIN SUFFICENT HEIGHT		COFFERDAM AS WELL AS DETERMINATION OF RECURRENCE INTERVAL OF ICE JAMS AT ELEVATION 22 TO 21 METERS.

The reader should note that at the present time (March 2013), MWH is not able to opine on some of the items they are required to express an opinion on. However, in order for the reader to be aware of the expectations of providing such opinion, a summary table has been included with this section to provide additional information as to our expectations as to when the IE may be able to opine.

4.3 CONSTRUCTION OF INTAKE & POWERHOUSE, SPILLWAY & TRANSITIONS DAMS CONTRACT REVIEW – CH0007

To date, MWH has only been furnished the RFP to solicit bids for Contract CH0007, and based on our review of the RFP, find that many of the subjects that we are required to comment on are not sufficiently addressed in the RFP. Nalcor requested MWH to review the RFP in lieu of the actual contract since the contract signing is expected to be June 4, 2013, the expected award date of the contract.

Based on the review of the RFP for Contract CH0007, we have prepared the following table to aid the reader in its assessment of what the IE has been able to conclude, to date (March 2013).

Table 4-2

CONTRACT (RFP) CH0007

CONSTRUCTION OF INTAKE & POWERHOUSE, SPILLWAY & TRANSITION DAMS

ITEM NO.	DESCRIPTION	OBSERVATIONS; SOURCE IN CONTRACT	REMARKS; QUESTIONS?	OPINION OF INDEPENDENT ENGINEER
1	QUALIFICATIONS OF CONTRACTOR	WE ONLY WERE FURNISHED AN RFP THAT WAS INCOMPLETE	NALCOR REQUIRED TO FURNISH THE CONTRACT FOR CH0007	
2	QUALIFICATIONS OF	SUBCONTRACTORS		

ITEM NO.	DESCRIPTION	OBSERVATIONS; SOURCE IN CONTRACT	REMARKS; QUESTIONS?	OPINION OF INDEPENDENT ENGINEER
	SUB-CONTRACTORS	ARE COVERED UNDER ARTICLE 6		
3	COMPLETENESS	RFP APPEARS TO BE COMPLETE		
4	CONTRACTS PERFORMED INDEPENDENTLY	WE REQUIRED A CPM SCHEDULE TO OPINE		
5	CONTRACTOR'S AND OWNER'S RESPONSIBILITIES	ARTICLE 2 LISTS THE GENERAL REQUIREMENTS OF THE CONTRACTOR; ARTICLE 3 LISTS THE CONTRACTOR'S WORK OBLIGATIONS; OWNER'S RESPONSIBILITIES COVERED UNDER ARTICLE 10; ENGINEER'S RESPONSIBILITIES UNDER ARTICLE 11	ARTICLE 9 MILESTONE SCHECULE IS MISSING FROM THE RFP	ROLES OF CONTRACTOR AND OWNER ARE CLEARLY DEFINED. SATISFACTORY
6	GUARANTEES, WARRANTIES	ARTICLE 7 COVERS PERFORMANCE SECURITY; UNDER PART 1, APPENDIX A2, 7. PERFORMANCE SECURITY, PERFORMANCE BONDS AND LABOUR AND MATERIAL PAYMENT BONDS ARE NOT REQUIRED. A PARENTAL GUARANTEE IS REQUIRED BY 7.4 AND AN LC OF 10% OF CONTRACT PRICE IS REQUIRED AS GIVEN IN ARTICLE 7 AT 7.6. UNDER ARTICLE 17, CONTRACTOR WARRANTIES WORK FOR 3 YEARS	LC OR PAYMENT BOND AMOUNT IS JUDGED TO BE TOO SMALL FOR THIS CONTRACT. NOTED OUR OPINION TO NALCOR FOR FURTHER CONSIDERATION. A MINIMUM AMOUNT OF ABOUT 20 TO 30% WOULD BE REASONABLE WE BELIEVE AFTER HOLDING DISCUSSIONS WITH GOVERNMENT TO SOLICIT THEIR OPINIONS. PAYMENT FOR THE LETTER OF CREDIT AND PARENT GUARANTEE (WHY WOULD NALCOR PAY FOR THIS?) IS ON A PRO-RATED MONTHLY	

ITEM NO.	DESCRIPTION	OBSERVATIONS; SOURCE IN CONTRACT	REMARKS; QUESTIONS?	OPINION OF INDEPENDENT ENGINEER
			INSTALLMENT OVER THE PERIOD OF THE AGREEMENT, NORMAL FOR SUCH LARGE CONTRACTS	
7	CHANGE ORDERS	ARTICLE 14 PROVIDES FOR CHANGES IN WORK; ONLY OWNER CAN MAKE A CHANGE. NO OVERHEAD AND PROFIT PERCENTAGES ARE GIVEN IN THE RFP. ARTICLE 30 COVERS DISPUTE RESOULUTION	REQUIRE A COMPLETE, FILLED-IN CONTRACT	SATISFACTORY
8	TRANSPORTATION PLAN	ARTICLE 22 LISTS SITE AND TRANSPORTATION CONDITIONS; AT 22.7, CONTRACTOR ASSUMES ALL RISK ASSOCIATED WITH RIVER AND WEATHER CONDITIONS AT THE SITE; IT NEGLECTS TO NOTE THAT THE OWNER PROVIDES THE REQUIREMENT FOR A 1:20 YEAR RETURN PERIOD FLOOD FOR DESIGN OF COFFERDAMS AND A MINIMUM HEIGHT FOR THE ICE DAM DISCHARGE EFFECTS ELEVATION OF COFFERDAM IS A CONCERN TO IE	WE RECOMMEND THAT NALCOR FURTHER ELABORATE ON THESE SECTIONS SINCE THEY ARE AGREEING TO PAY FOR A HIGHER COFFERDAM FOR THE ICE DAM BREACH AND UP TO A 1:2O RETURN PERIOD FLOOD/ ICE EVENT. WE REQUIRE THE TRANSPORTATION PLAN TO BE FURNISHED BEFORE WE CAN OPINE.	
9	LOGISTICS/STORAGE OF MATERIALS	TRANSPORTATION IS COVERED UNDER ARTICE 22; STORAGE IS ACTUALLY COVERED UNDER PAY ITEM FOR SITE INSTALLATION; THE	CURRENTLY, INFORMATION IS LACKING TO FORM AN OPINION; WE NEED THE TRANSPOSRTATION PLAN; THE	

ITEM NO.	DESCRIPTION	OBSERVATIONS; SOURCE IN CONTRACT	REMARKS; QUESTIONS?	OPINION OF INDEPENDENT ENGINEER
		CONTRACT IS SILENT ON THE AMOUNT OF STORAGE REQUIRED WHICH MAY BE SHOWN ON THE DRAWINGS WHICH WE DO NOT HAVE.	WAREHOUSING AND STORAGE PLAN; THE TRACKING PLAN FOR ITEMS IN WAREHOUSES.	
10	CONFORMS TO INDUSTRY STANDARDS	WE REQUIRED THE CONTRACT DOCUMENTS BEFORE AN OPINION CAN BE GIVEN.	NALCOR TO SUPPLY THE CONTRACT	
11	COMPENSATION TERMS	PART 2, EXHIBIT 2—ATTACHMENT 1 CONTAINS MEASUREMENT AND PAYMENT PROVISIONS. IT ALSO INCLUDED PROVISIONS FOR FIXED LUMP SUMS AND UNIT PRICES WORK AND INCLUDES PROVISIONS FOR INFLATION. A MONTHLY FORECAST SCHDULE IS REQUIRED.		SATISFACTORY
12	GUARANTEEES & LIQUIDATED DAMAGES	LDS ARE GIVEN IN PART 2, EXHIBIT 2, SECTION 12, LIQUIDATED DAMAGES FOR DELAY AND PERFORMANCE INCENTIVES. ALSO GIVEN IN ARTICLE 26 WHICH LIMITS THE TOTAL AMOUNT OF LDS TO 5% OF THE CONTRACT PRICE	EXAMPLES OF HOW LDS ARE COMPUTED SHOULD BE FURNISHED TO THE IE FOR REVIEW. WE PLAN TO INCLUDE IN APPENDIX I.	
13	PERFORMANCE BOND, LDS, BONUS, BUYDOWN/OUT	BONUS PROVISIONS ARE GIVEN IN PART 2, EXHIBIT 2, SECTION 12.2 FOR ACHIEVING MILESTONES, OR EARLY ACHIEVEMENT	WE REQUIRE BACKUP INFORMATION TO SUPPORT THE AMOUNTS USED FOR LDS AND BONUSES.	

ITEM NO.	DESCRIPTION	OBSERVATIONS; SOURCE IN CONTRACT	REMARKS; QUESTIONS?	OPINION OF INDEPENDENT ENGINEER
		THEREOF. PERFORMANCE SECURITY EXHIBIT 14, IS $50,000,000 UNTIL FINAL COMPLETION CERTIFICATE HAS BEEN ISSUED; AND $10,000,000 DURING THE WARRANY PERIOD DISCUSSED IN ARTICLE 17		
14	COMPLIANCE CONTRACTS, PERMITS, PERFORMANCE	A SITE SPECIFIC ENVIRONMENTAL PLAN IS REQUIRED; NALCOR WILL FURNISH ALL PERMITS REQUIRED BY OWNER TO BE OBTAINED; CONTRACTOR RESPONSIBLE FOR OTHERS. CONTRACTOR MUST FOLLOW THE OWNER-FURNISHED PERMITS.	A LISTING OF CONTRACTOR FURNISHED PERMITS NEEDS TO BE REVIEWED BEFORE AN OPINION CAN BE GIVEN	
15	GUARANTEE OF EQUIPMENT	NOT APPLICABLE		NO OPINION REQUIRED
16	CONSTRUCTION SCHEDULE	CRITICAL PATH SCHEDULE AND EXECUTION PLAN ARE REQUIRED TO BE FURNISHED		DATA ARE NOT AVAILABLE FOR IE TO FORM AN OPINION
17	SCHEDULE REVIEW; ADEQUATE PROVISIONS	CRITICAL PATH SCHEDULE IS REQUIRED FOR REVIEW		
18	CRITICAL PATHS	MILESTONE DATES REQUIRES; CPM SCHEDULE REQUIRED; SUBSTANTIAL COMPLETION DATE REQUIRED	MORE INFORMATION IS REQUIRED TO ALLLOW AN ASSESSMENT TO BE PERFORMED BY THE IE	DATA ARE NOT AVAIALBE FOR THE IE TO FORM AN OPINION
19	LIKELIHOOD OF ACHIEVING MILESTONES		DATA MISSING	DATA NOT AVAILABLE; IE CAN NOT FURNISH AN

ITEM NO.	DESCRIPTION	OBSERVATIONS; SOURCE IN CONTRACT	REMARKS; QUESTIONS?	OPINION OF INDEPENDENT ENGINEER
				OPINION AT THIS TIME
20	SUBSURFACE CONDITIONS	ARTICLE 23 PROVIDES PROTECTION TO THE CONTRACTOR IF IT ENCOUNTERS UNFORESEEN GEOLOGICAL OR GEOTECHNICAL CONDITIONS, INCLUDING GROUND WATER WHICH IT BELIEVES WILL IMPACT THE PROJECT SCHEDULE. ARTICLE 14, IF ACCEPTABLE TO THE OWNER WILL ALLOW A CHANGE TO BE MADE TO THE CONTRACT		SATISFACTORY

The reader should be aware of the fact that the Independent Engineer can only give opinions once it has sufficient information to review to be reasonable certain that there will be no changed conditions that would negate its opinion or observation. Opinions can be expressed in a manner that will qualify the IE's knowledge at the time of making an opinion that is a 'forecast' of what the IE believed to be reasonable expected. Because many of the contracts that the IE will be reviewing will be released later during 2013 and one contract released after financial close, there are "gaps" in this draft document that will be required to be completed prior to financial close. For the contract that will be available after financial close, CT0346, it is similar to CT0327 and provides a means for MWH to forecast on opinion, if required by the Government of Canada before financial close.

4.4 TURBINES & GENERATORS DESIGN, SUPPLY AND INSTALL AGREEMENT – CH0030

Contract CH0030 was awarded on December 31, 2012, and is scheduled to be substantial complete by March 23, 2017, when commissioning the Muskrat Falls Powerhouse is planned to occur. The amount of the contract is $166,969,064.98. The contract was awarded to Andritz Hydro Canada Inc. whose parent-company, Andritz Hydro is a world-wide-known, tier-one company that supplies hydrogenating equipment. Most of the components for the turbine will be fabricated and assembled in China at companies that Andritz Hydro has an interest in and is able to use the technologies developed by Andritz in their design, manufacturing and assemble processes.

Table 4-3

CONTRACT CH0030

TURBINES & GENERATORS DESIGN, SUPPLY AND INSTALL AGREEMENT

ITEM NO.	DESCRIPTION	OBSERVATIONS; SOURCE IN CONTRACT	REMARKS; QUESTIONS?	OPINION OF INDEPENDENT ENGINEER
1	QUALIFICATIONS OF CONTRACTOR	ANDRITZ HYDRO CANADA INC., REGISTERED IN NEW BRUNSWICK, AND ITS PARENT COMPANY, ANDRITZ IS A TIER ONE SUPPLIER OF TURBINES AND ASSOCIATED EQUIPMENT		THE CONTRACTOR IS SATISFACTORY
2	QUALIFICATIONS OF SUB-CONTRACTORS	ALMOST ALL OF THE SUB-CONTRACTORS, SUB-SUPPLIERS ARE UNKNOWN TO MWH AND FOR THE TURBINE WHICH WILL BE MANUFACTURED IN TIANBAO, CHINA. ABB WILL SUPPLY THE STATIC EXCITATION SYSTEM; THE DIGITAL GOVERNOR WILL BE SUPPLIED BY AH HEMI CONTROLS; THE ROTOR POLES WILL BE FROM AH BHOPAL, INDIA; THE STATOR BARS & CONNECTIONS WILL BE FURNISHED BY AH LACHINE, CANADA; THE STATOR PUNCHINGS FROM AH WEIZ, AUSTRIA	IT IS NOT CLEAR WHERE THE GENERATOR WILL BE ASSEMBLED FIRST AND TESTED TO INSURE THAT ALL COMPONENTS WILL BE READY FOR ASSEMBLY IN THE FIELD; WE MUST SURMISE THAT THIS WILL NOT BE DONE AND THAT ANY MODIFICATIONS WILL REQUIRE FIELD MACHINING TO ALLOW PARTS TO FIT PROPERLY IF THERE ARE ANY ISSUES ENCOUNTERED. SINCE THE TURBINE IS AT A SIZE LIMIT FOR THE LARGEST	ANDRITZ IS A SATISFACTORY CONTRACTOR. HOWEVER, MWH IS UNABLE TO OPINE ON THE SUB-CONTRACTORS BEING USED TO SUPPLY THE MAJOR COMPONENTS OF THE TURBINE AND OF CERTAIN COMPONENTS OF THE GENERATOR SINCE WE HAVE NO EXPERIENCE IN DEALING WITH THEM. WE REQUIRE THE FOLLOWING: EXPERIENCE RECORD OF SIMILAR PROJECTS; COMPANY BROCHURES; LIST OF MAJOR EQUIPMENT USED IN THE MANUFACTURING

ITEM NO.	DESCRIPTION	OBSERVATIONS; SOURCE IN CONTRACT	REMARKS; QUESTIONS?	OPINION OF INDEPENDENT ENGINEER
		(AH=ANDRITZ HYDRO)	DIAMETER BEING SUPPLIED, AND IN THE 9 METER CLASS, VERY CAREFUL MONITORING OF ALL WORK SHOULD BE REQUIRED.	PROCESS; COMPANY ORGANIZATION CHART; ISO CERTIFICATION PROOF; ANDRITZ PAST EXPERIENCE WITH THE SUPPLIER.
3	COMPLETENESS	WE STILL REQUIRE ADDITIONAL DATA IN THE RESPONSE TO THE RFP WE HAVE NOT BEEN PROVIDED WITH EXAMPLES TO CLEARLY ILLUSTRATE THAT THE LDS ARE REALISTIC AND CAN BE SUPPORTED IF AN ISSUE GOES TO COURT. WE HAVE FURNISHED A LIST OF QUESTIONS AND ARE AWAITING A RESPONSE		CURRENTLY, WE ARE AWAITING A RESPONSE TO ADDITIONAL QUESTIONS. NO OPINION CAN YET BE GIVEN
4	CONTRACTS PERFORMED INDEPENDENTLY	WE DO NOT HAVE A CPM SCHEDULE TO FULLY UNDERSTAND THE IMPACT OF DELAYS ON OTHER CONTRACTORS, BUT BELIEVE THAT FOR THE EMBEDDED ITEMS FOR THE TURBINE, A SUBSTANTIAL IMPACT TO THE POWERHOUSE CONTRACTOR		MWH WILL NOT BE ABLE TO OFFER AN OPINION UNTIL WE BETTER UNDERSTAND HOW THE EQUIPMENT WILL BE HANDLED AND REQUIRED SUPPORT DATA INCLUDING THE CPM

ITEM NO.	DESCRIPTION	OBSERVATIONS; SOURCE IN CONTRACT	REMARKS; QUESTIONS?	OPINION OF INDEPENDENT ENGINEER
		COULD OCCUR. SINCE MOST OF THE MANUFACTURING WILL OCCUR IN CHINA, NECESSITATING OCEAN SHIPMENTS AS WELL AS LAND TRANSPORT, MONITORING VERY CLOSELY WILL BE VERY IMPORTANT. FIT-UP IN THE FIELD WILL DEPEND ON THE WORK PLAN THAT WE CURRENTLY DO NOT HAVE FOR REVIEW		
5	CONTRACTOR'S AND OWNER'S RESPONSIBILITIES	IN SCOPE OF WORK, 2.7 DEALS WITH OWNER'S RESPONSIBILITY OF SUPPLY; EXHIBIT 11 ALSO IS A NALCOR SUPPLY REQUIREMENTS; EXHIBIT 9 IS ANDRITZ WORK AND MILESTONE SCHEDULE		SATISFACTORY
6	GUARANTEES, WARRANTIES	EXHIBIT 1, APPENDIX B DISCUSSES GUARANTEES; IN THE TECHNICAL SPECIFICATIONS, SECTION 2.3 GUARANTEES ARE DISCUSSED; ALSO IN THE TS UNDER 2.4 DISCUSS THE WARRANTIES	THE GUARANTEES AND WARRANTIES ARE TYPICAL FOR UNITS EXCEPT FOR THE DIMENSIONABLE STABILITY AND CRACKING ONES; IN OUR OPINION THESE ARE AN APPROPIRATE	SATISFACTORY

ITEM NO.	DESCRIPTION	OBSERVATIONS; SOURCE IN CONTRACT	REMARKS; QUESTIONS?	OPINION OF INDEPENDENT ENGINEER
			ADDITION TO THOSE WE NORMALL REVIEW	
7	CHANGE ORDERS	CHANGE ORDERS ARE DISCUSSED IN SEVERAL LOCATIONS OF THE CONTRACT DOCUMENTS. IN EXHIBIT 2, SECTION 4 CHANGE IS DISCUSSED; IN SCOPE OF WORK, ARTICLE 3, AT 3.19 CHANGE ORDER IS DISCUSSED; AND IN EXHIBIT 3, SECTION 7, CHAGE ORDERS ARE DISCUSSED	WE BELIEVE THAT IN THE DEFINITIONS, THE AREAS IN THE CONTRACT DOCUMENTS WHERE CHANGE ORDER IS DISCUSSED SHOULD BE LISTED FOR THE PARTIES QUICK REFERENCE.	SATISFACTORY
8	TRANSPORTATION PLAN	ARTICLE 2.2.6 DISCUSSES LOGISTICS, ARTICLE 7.7.3 AND 7.7.4 DISCUSS THE TRANSPORTATION REQUIREMENTS; AND APPENDIX A15, LOGISTICS AND TRASNPORTATION STRATEGY	WE REQUESTED CLARIFICATION ON ANY LOAD RESTRICTIONS TO THE BRIDGE DOWNSTREAM OF THE PROJECT AND RECEIVED IT. APPENDIX A15 INDICATES THAT THIS BRIDGE IS ADEQUATE. WHAT IS ITS LOAD RESTRICTION AND WHAT IS THE WEIGHT AND HEAVIEST PIECE OF EQUIPMENT THAT WILL BE TRANSPORTED OVER IT?	NO FORMAL PLAN WAS GIVEN, BUT APPENDIX A15 SUFFICES FROM OUR PERSPECTIVE AT THIS TIME TO ALLOW US TO OPINE. SATISFACTORY
9	LOGISTICS/STORAGE OF MATERIALS	THE TS IN 1.6.3 DISCUSSES SHIPPING; IN	IT WOULD BE DESIRABLE TO HAVE REQUIRED	SATISFACTORY

ITEM NO.	DESCRIPTION	OBSERVATIONS; SOURCE IN CONTRACT	REMARKS; QUESTIONS?	OPINION OF INDEPENDENT ENGINEER
		EXHIBIT 1, SECTION 7, COVERS STORAGE, PRESERVATION AND PREPARATION OF MATERIALS; ARTICLE 22, SITE & TRANSPORTATION ROUTE CONDITIONS	A SYSTEM TO INVENTORY VIA ELECTRONIC MEANS ALL EQUIPMENT AND NOTE LOCATION WITHIN STORAGE BUILDING FOR EASE IN LOCATING DURING THE WORK.	
10	CONFORMS TO INDUSTRY STANDARDS	CONTRACT APPEARS TO CONFORM TO INDUSTRY STANDARDS AND IN SOME AREAS, IN OUR OPINION, EXCEEDS INDUSTRY STANDARDS		SATISFACTORY
11	COMPENSATION TERMS	EXHIBIT 2, SECTION 2 LISTS MILESTONE PAYMENTS; APPENDIX B TO EXHIBIT 2 IS THE MILESTONE PAYMENT SCHEDULE; EXHIBIT 2, SECTION 8 IS THE CONTRACT PRICE	TERMS APPEAR TO BE WELL EXPLAINED AS GIVEN IN APPENDIX B. PRICE IS COMPETITIVE BUT IS EXPECTED FROM PRODUCTS CURRENTLY BEING PRODUCED IN CHINA	SATISFACTORY
12	GUARANTEEES & LIQUIDATED DAMAGES	EXHIBIT 2, SECTION 7 DISCUSSES LDS; EXHIBIT 1, APPENDIX B, DISCUSSES PERFORMANCE GUARANTEES; TD, SECTION 2.3 GUARANTEES	A SAMPLE COMPUTATION WOULD BE HELPFUL IN EXPLAINING HOW THE GUARANTEE PENALITIES AND LDS WILL BE APPLIED AND SHOWING HOW	WE REQUIRE A SAMPLE COMPUTATION TO ALLOW US TO JUSTIFY THAT THE AMOUNT OF DAMAGES BEING REQUESTED IS REASONABLE.

ITEM NO.	DESCRIPTION	OBSERVATIONS; SOURCE IN CONTRACT	REMARKS; QUESTIONS?	OPINION OF INDEPENDENT ENGINEER
			THE LIMITATIONS ON PENALITIES WILL BE USED TOO. WE PLAN TO INCLUDE SAMPLE COMPUTATIONS IN APPENDIX I.	
13	PERFORMANCE BOND, LDS, BONUS, BUYDOWN/OUT	ARTICLE 35 DISCUSSES THE PERFORMANCE GUARANTEES; ARTICLE 36 DISCUSSES LIQUIDATED DAMAGES; ARTICLE 37 DISCUSSES PERFORMANCE TESTING. NOTE THAT SOME OF THE FORMULAS RELATE TO KILLOWATT AND THAT THE FORMULAS FOR THE LDS ARE IN MWH—THEY SHOULD BE CONSISTENT	PERFORNMANCE BOND REQUIRED FOR 50% OF CONTRACT PRICE; A BUYOUT PROVISION IS PROVIDED FOR A SITUATION WHERE PITTING OCCURS AGAIN AFTER THE FIRST 40,000 HOUR PERIOD- TERMS ARE NOT DESCRIBED THAT REQUIRES ATTENTION. NO BONUS PROVISIONS ARE PROVIDED WITHIN THE CONTRACT WHICH IN SOME COURT SYSTEMS LEADS TO DIFFICULTITES WHEN LDS ARE BEING ASSSESSED LC OF 15% OF CONTRACT PRICE IS REQUIRED.	THESE CONDITIONS REQUIRE FURTHUR CONSULTATION WITH NALCOR TO ENSURE WE UNDERSTAND THEM. WITHOUT SOME CHANGES, WE FIND THAT THESE CONDITIONS WOULD NOT NORMALLY MEET INDUSTRY STANDARDS. HOWEVER, SINCE ANDRITZ ACCEPTED THEM, THEY WILL APPLY TO THIS CONTRACT SINCE THEY WERE CONSIDERED WHEN THE CONTRACT TERMS WERE NEGOTIATED.
14	COMPLIANCE CONTRACTS, PERMITS, PERFORMANCE	EXHIBIT 1, ITEM 13; EXHIBIT 6, ENVIRONMENTAL AND REGULATORY COMPLIANCE	IT WOULD BE BEST TO PROVIDE A COMPLETE LIST TO THE CONTRACTOR	SATISFACTORY

ITEM NO.	DESCRIPTION	OBSERVATIONS; SOURCE IN CONTRACT	REMARKS; QUESTIONS?	OPINION OF INDEPENDENT ENGINEER
		REQUIREMENTS; ARTICLE 15, HEALTH, SAFETY AND ENVIRONMENTAL PROTECTION	FOR EASE OF REFERENCE, IN OUR OPINION; ON THE LIST THOSE PERMITS AND ITEMS REQUIRED FOR THE CONTRACTORS ATTENTION SHOULD BE HIGHLIGHTED	
15	GUARANTEE OF EQUIPMENT	AS DISCUSSED IN 12 ABOVE, GUARANTEES ARE GIVEN	DURING OUR DISCUSSIONS IN ST.JOHN'S, THE LDS WERE NOT DESCRIBED TO SUFFICIENTLY ADDRESS MWH'S REMARKS HEREIN	WE WOULD LIKE TO REVIEW SAMPLE COMPUTATIONS FOR EACH OF THE GUARANTEES AS TO THE AMOUNTS BEING REASONABLE NO OPINION CAN BE GIVEN AT THIS TIME
16	CONSTRUCTION SCHEDULE	MILESTONES ARE GIVEN IN EXHIBIT; WE REQUIRE A CPM	WE REQUIRE A CPM BEFORE WE CAN OPINE	NO OPINION CAN BE GIVEN AT THIS TIME
17	SCHEDULE REVIEW; ADEQUATE PROVISIONS		WE REQUIRE A CPM BEFORE WE CAN OPINE	NO OPINION CAN BE GIVEN AT THIS TIME
18	CRITICAL PATHS	WE REQUIRE A CPM SCHEDULE		
19	LIKELIHOOD OF ACHIEVING MILESTONES	MILESTONES ARE GIVEN IN EXHIBIT 2, APPENDIX B.	WE REQUIRE THE CPM TO FURNISH AN OPINION	WE DO NOT HAVE THE EXPERIENCE WITH THESE SUPPLIERS' USING PRINCIPALLY CHINESE MADE EQUIPMENT TO EXPRESS THIS OPINION ON THESE LARGE SIZE MACHINES; WE REQUIRE ADDITIONAL

ITEM NO.	DESCRIPTION	OBSERVATIONS; SOURCE IN CONTRACT	REMARKS; QUESTIONS?	OPINION OF INDEPENDENT ENGINEER
				SUPPORT INFORMATION TO DEMONSTRATE THAT THE FABRICATION AND CASTING COMPANIES HAVE SIMILAR EXPERIENCE ON LARGE KAPLAN MACHINES AND THAT THIS IS NOT THEIR FIRST TIME IN MANUFACTURING 9M KAPLAN EQUIPMENT.
20				

As noted previously in the discussion following Table 4-2, we have included a discussion of how we believe we can accommodate any items that remains "blank" or yet undesignated, that leave "gaps" in the table because we either do not have a contract to review or that have not been addressed by Nalcor to allow the IE to inform the reader as to our current position regarding the review of CH0030 documents.

4.5 STRAIT OF BELLE ISLE SUBMARINE CABLE DESIGN, SUPPLY AND INSTALL CONTRACT – LC-SB-003

Contract LC-SB-003 was awarded with a start date of December 12, 2012, and with a given substantial completion date of November 28, 2016. The early start of this contract was necessitated by the advantage Nalcor Energy realized in favorable market conditions for the subsea cable as well as being able to schedule the manufacture of the cable early by reserving the manufacturing facilities in Japan to fabricate the cable and appurtenances associated with it. The contract amount is $125,245,370.00. Nexans Cable is one of the three cable companies in the world that has the required experience in manufacturing and installing subsea cables, and coupled with Nippon High Voltage Cable Corp. experience in manufacturing subsea cables, has been critical to assuring a successful project in the opinion of Nalcor Energy.

Listed below in Table 4-4 are the current findings and opinions of MWH pertaining to contract LC-SB-003

Table 4-4

CONTRACT LC-SB-003

STRAIT OF BELLE ISLE SUBMARINE CABLE DESIGN, SUPPLY AND INSTALL

ITEM NO.	DESCRIPTION	OBSERVATIONS; SOURCE IN CONTRACT	REMARKS; QUESTIONS?	OPINION OF INDEPENDENT ENGINEER
1	QUALIFICATIONS OF CONTRACTOR	NEXANS CABLE IS A TIER ONE SUPPLIER AND INSTALLER OF SUB-SEA CABLES		SATISFACTORY
2	QUALIFICATIONS OF SUB-CONTRACTORS	ARTICLE 6 DISCUSSES SUB-CONTRACTORS; EXHIBIT 3 LISTS NIPPON HIGH VOLTAGE CABLE CORP AS THE MANUFACTURE OF THE CABLE	DISCUSSION ON JAN.4, 2013, NOTED NIPPON AND NEXANS IN JV TO MANUFACTURE CABLE. AUDIT CONDUCTED APRIL-MAY, 2012 AND WAS SATISFACTORY	SATISFACTORY
3	COMPLETENESS	NO CONSTRUCTION DRAWINGS WERE INCLUDED WITH CONTRACT; EXHIBIT 5 REFERS TO LOCATION PLAN DRAWINGS INCLUDED IN EXHIBIT 6—COMPANY SUPPLIED DATA	THE DOCUMENT AS IT STANDS APPEARS TO STILL BE INCOMPLETE. NALCOR REPORTED THEY ISSUED PERFORMANCE SPECIFICATIONS. MWH REQUIRES DRAWING REVIEW TO VERIFY DESIGN; CORRIDOR SLECTED BY MAY 2013	WAITING TO RECEIVE CONSTRUCTION DRAWINGS SHOWING COORIDOR AND DESIGN DETAILS FOR FORMING AN OPINION
4	CONTRACTS PERFORMED INDEPENDENTLY	NEXANS IS EXPECTED TO WORK CLOSELY WITH NALCOR ON THIS PROJECT THAT IS MANAGED BY NALCOR. THEY ALSO INDICATE THEY WILL BE	INTERFACE AT SHORE NEEDS TO BE DISCUSSED AND SHOWN ON CPM SCHEDULE	TENATIVE: SATISFACTORY MWH WAITING TO RECEIVE CPM TO ALLOW OPINION TO BE EXPRESSED.

ITEM NO.	DESCRIPTION	OBSERVATIONS; SOURCE IN CONTRACT	REMARKS; QUESTIONS?	OPINION OF INDEPENDENT ENGINEER
		WORKING CLOSELY WITH NIPPON.		
5	CONTRACTOR'S AND OWNER'S RESPONSIBILITIES	CONTRACTOR'S RESPONSIBILITIES ARE GIVEN IN ARTICLES 2, 3, AND 4 OF THE CONTRACT; NALCOR'S ARE COVERED UNDER ARTICLE 10		SATISFACTORY
6	GUARANTEES, WARRANTIES	ARTICLE 17, WARRANTIES, PROVIDES FOR 36 MONTHS; CAN BE EXTENDED 36 MONTHS IF FAILURE OR REPAIR REQUIRED OF PART OR SYSTEM.	GURANATEES ARE NOT MENTIONED. NALCOR ADVISED THAT ONLY THE WARRANTY OF 36 MONTHS APPLIES WHICH EXCEEDS INDUSTRY STANDARDS BY AT LEAST 12 MONTHS	SATISFACTORY
7	CHANGE ORDERS	ARTICLE 26 PROVIDES FOR CHANGES ORDERED BY NALCOR; ARTICLE 39 COVERS DISPUTE RESOULUTION	EXHIBIT 4, SECTION 11 DISCUSSES CO	SATISFACTORY
8	TRANSPORTATION PLAN	NONE WAS EXPLICITLY REQUESTED OR FURNISHED BUT WOULD BE INCLUDED IN 0.5.2 EXECUTION PLAN AND METHOD STATEMENT, ITEMS (bb), (cc), (dd).	UNABLE TO OPINE UNTIL THE PLAN IS PREPARED AND REVIEWED BY MWH	WATING TO RECEIVE PLAN
9	LOGISTICS/STORAGE OF MATERIALS	EXHIBIT 1A SCOPE OF WORK, SECTION 7 CONTAINS REQUIREMENTS FOR STORAGE,	MWH REQUIRES ADDITIONAL INFORMATION SINCE NO PARTICULAR INFORMATION IS	TENATIVE: SATISFACTORY AWAITING TO RECEIVE THE EXECUTION PLAN

ITEM NO.	DESCRIPTION	OBSERVATIONS; SOURCE IN CONTRACT	REMARKS; QUESTIONS?	OPINION OF INDEPENDENT ENGINEER
		PRESERVATION AND PREPARATION. IT WOULD ALSO BE EXPECTED TO BE FURNISHED UNDER 0.5.2 EXECUTION PLAN AND EXHIBIT 4, SECTION 14	FURNISHED. NALCOR ADVISED MWH THAT STORAGE WILL BE LOCATED AT THE PORTS.	
10	CONFORMS TO INDUSTRY STANDARDS	CONTRACT APPEARS TO BE GENERALLY COMPLETE		SATISFACTORY
11	COMPENSATION TERMS	PART 2, EXHIBIT 2 COVERS COMPENSATION	THE BREADOWN OF ITEMS AND THE UNIT OF MEASURE APPEAR TO BE ADEQUATE FOR THIS CONTRACT	SATISFACTORY
12	GUARANTEEES & LIQUIDATED DAMAGES	LDS ARE GIVEN IN EXHIBIT 2, SECTION 7; REQUIRE $200,000/DAY FOR MISSING MILESTONE GIVEN IN SECTION 4 AND EXHIBIT 11-MILESTONE SCHEDULE	NALCOR ADVISED THE BARGE STANDBY RATE OF $200 K/DAY WAS USED FOR DELAYS. THE RATE WILL BE ASSESSED AS A PORTION OF A DAY TO THE NEAREST HOUR.	SATISFACTORY
13	PERFORMANCE BOND, LDS, BONUS, BUYDOWN/OUT	PERFORMANCE BOND COVERED IN ARTICLE 7 AMOUNTING TO 50% OF THE CONTRACT PRICE; LC OF 15% OF CONTRACT PRICE	NO COMPANY GUARANTEE WAS REQUIRED	SATISFACTORY
14	COMPLIANCE CONTRACTS, PERMITS, PERFORMANCE	IN PART 1, SECTION 0.7, 10. ENVIRONMENTAL, THERE ARE REQUIREMENTS FOR A PROGRAM.	SINCE NEXANS IS A FOREIGN CONTRACTOR, SOME OF THE RESPONSIBILITIES PLACED ON	TENATIVE: SATISFACTORY

ITEM NO.	DESCRIPTION	OBSERVATIONS; SOURCE IN CONTRACT	REMARKS; QUESTIONS?	OPINION OF INDEPENDENT ENGINEER
		IT IS NOT SPECIFIC WITH RESPECT TO PERMITS; PERMITS ARE TO BE OBTAINED BY NALCOR; OTHER PERMITS FOR THE WORK VESSEL WOULD NORMALLY BE THE RESPONSIBIITY OF NEXANS. EXHIBIT 1A, SCOPE OF WORK, SECTION 2.2, TABLE 2.2 LISTS THE CONSENTS, AUTHORIZATION AND PERMITS. THE TEXT FURTHER STATES THAT THE CONTRACTOR SHALL OBTAIN AND MAINTAIN ALL OTHER AUTHORIZATIONS, PERMITS, DISPENSATIONS, CONSENTS AND LICENSES, REQUIRED BY APPLICABLE LAWS TO ENABLE IT TO PERFORM THE WORK THAT CAN BE OBTAINED IN THE CONTRACTOR'S NAME.	THEM MAY BE UNFAMILIAR TO THEM, LEAVING ROOM FOR AN INCOMPLETE RESPONSE AND DELAY OR OMISSION CAUSING A DELAY.	
15	GUARANTEE OF EQUIPMENT	GUARANTEES ARE NOT FURNISHED; WARRANTY OF WORK AND MATERIAL FOR 36 MONTHS, AND AFTER REPAIR, ANOTHER 36 MONTHS OF SERVICE	WARRANTY PERIOD REVISED DOWN TO 36 MO. FROM ORIGINAL PROPOSED 60 MONTHS. NO GUARANTEES ARE PROVIDED. TYPICALLY, INDUSTRY	SATISFACTORY

ITEM NO.	DESCRIPTION	OBSERVATIONS; SOURCE IN CONTRACT	REMARKS; QUESTIONS?	OPINION OF INDEPENDENT ENGINEER
			REQUIRES ONLY ONE OR TWO YEARS. TESTING WILL OCCUR BEFORE AND AFTER PLACING THE ROCK FILL PROTECTION.	
16	CONSTRUCTION SCHEDULE	MILESTONES FURNISHED IN PART 2, EXHIBIT 11, MILESTONE SCHEDULE;CPM SCHEDULE IS REQUIRED TO BE FURNISHED	MWH REQUIRES A CPM SCHEDULE	MWH AWAITING TO REVIEW THE CPM
17	SCHEDULE REVIEW; ADEQUATE PROVISIONS	MWH REQUIRES CPM SCHEDULE TO REVIEW		MWH AWATING TO REVIEW THE CPM
18	CRITICAL PATHS	MWH REQUIRES CPM SCHEDULE		MWH AWAITING TO REVIEW THE CPM
19	LIKELIHOOD OF ACHIEVING MILESTONES	NO OPINION CAN BE OFFERED AT THIS TIME		NO OPINION CAN BE GIVEN AT THIS TIME

4.12 GUARANTEES AND LIQUIDATED DAMAGES

Included with the contract summaries as provided in Section 4 of the report are provisions established by our Agreement with Nalcor Energy for the respective contracts. For the contracts that we are expected to review, we have tabulated the results found during our reviews into Table 4-8, below, for easy reference.

Table 4-11

SUMMARY OF GUARANTEES AND LIQUIDATED DAMAGES

ITEM NO.	CONTRACT OR RFP NO.	ITEM NOs. IN TABLES	OBSERVATIONS	REMARKS; QUESTIONS	OPINION OF INDEPENDENT ENGINEER
1	CH0006 (MF) CONTRACT	6	NO GUARANTEES 3 YEAR	IE REQUIRES TIME TO OBSERVE	NO IE OPINION UNTIL OBSERVE PERFORMANCE

ITEM NO.	CONTRACT OR RFP NO.	ITEM NOs. IN TABLES	OBSERVATIONS	REMARKS; QUESTIONS	OPINION OF INDEPENDENT ENGINEER
			WARANTEE	PERFORMANCE	
		12	NO GUARANTEES NO LDS	IE REQUIRES TIME TO OBSERVE PERFORMANCE	NO IE OPINION UNTIL OBSERVE PERFORMANCE
		13	NO PERFROMANCE BOND OR PAYMENT BOND REQUIRED	IE REQUIRES CLARIFICATION FROM NALCOR AS TO WHAT PERFORMANCE SECURITY EXISTS OTHER THAN HOLDBACK PERCENTAGE OF PAYMENTS	NO IE OPINION UNTIL MWH RECEIVES ADDITIONAL CLARIFICATION AND INFORMATION
		15	NOT APPLICABLE		NOT APPLICABLE
2	CH0007 (MF) RFP	6	LC AND PAYMENT BOND JUDGED TO BE TOO SMALL; WARANTEE OF WORK FOR THREE YEARS PARENTAL GUARANTEE IS REQUIRED	NALCOR IS REVIEWING ALL PROVISIONS FOR LCS, GUARANTEES, WARANTEES, PAYMENT AND PERFORMANCE BONDS	NO IE OPINION CAN BE FURNISHED AT THIS TIME; AWAITING DECISIONS BY NALCOR AS TO WHAT THEY WILL REQUIRE CONTRACTOR TO PROVIDE IN ITS BID
		12	LDS RANGING FROM $15K TO $20K FOR MISSED MILESTONES ARE GIVEN IN PART 2, EXHIBIT 2, SECTION 12. PERFORMANCE INCENTIVES ARE ALSO GIVEN IN SECTION 12.2 WITH A POSSIBLE TOTAL BONUS OF $16.5M	EXAMPLES OF HOW LDS ARE COMPUTED ARE REQUIRED BY THE IE	NO OPINION CAN BE GIVEN AT THIS TIME BY THE IE SINCE WE HAVE ONLY REVIEWED RFP AND REVISIONS ARE EXPECTED
		13	SEE 12 DIRECTLY ABOVE FOR BONUS PROVISIONS DECISIONS ON PERFORMANCE	NALCOR REQUIRED TO MAKE DECISIONS REGARDING THESE ISSUES	NO OPINION BY IE CAN BE GIVEN AT THIS TIME PENDING NALCOR'S DECISIONS AND OUR REVIEW OF

4.13 CONSTRUCTION SCHEDULE

To allow the Independent Engineer to address the questions contained in our Agreement and to provide information to the reader, we have assumed that the Decision Gate No.3 Critical Path Construction Schedule for the Project would form the basis for our comments. We also have presently, CPM schedules for the following contracts: CH006; CH0030; and LC-SB-003 that were provided in the contract documents for these awarded work packages. A copy of the DG No.3 CPM Schedule is included in Appendix K.

4.13.1 Schedule Review and Adequate Provisions

Awaiting staff input

4.13.2 Principal Critical Paths

Awaiting staff input

4.14 LIKELIHOOD OF ACHIEVING MILESTONES

Figure 4-1 presents the Target Milestone Schedule established by Nalcor Energy for key components of the Work which is and will be monitored very closely by the EPCM consultant as well as Nalcor Energy personnel assigned to the particular components of the project. The milestone schedule represents the planning at the DG3 level of project planning and was Sanctioned by Government. The Target Milestone Schedule is also supported by the Project's Critical Path Schedule which was prepared by Nalcor Energy and its consultants and forms the basis for the Milestone Schedule.

In general, Nalcor Energy has presented a well-planned project which included the preparation of risk assessments and constructability reviews to support their planning. This methodology should result in a higher level of certainty to achieving the milestones than most projects the IE

has reviewed. The Independent Engineer has examined several of the key project components to allow it to offer preliminary opinions at this time.

Opinion 1: ON HOLD; to be furnished when MWH has more information.

Opinion 2: ON HOLD; to be furnished when MWH has more information.

The Independent Engineer believes that it will be a more knowledgeable position to opine on achieving milestones after it views the progress on the first contracts that have been awarded by Nalcor Energy that allow it to view actual progress and achievements of the suppliers and contractors working in the conditions that prevail for the Project.

4.15 SUPPLY CONTRACTS SCHEDULES

NALCOR'S REPRESENTATIVE SENT EMAIL REQUESTING THESE SCHEDULES ON February 6, 2013

4.16 PERFORMANCE TEST CRITERIA

4.16.1 Turbines and Generators

The performance test criteria for the turbines and generators (Contract: CH0030) are the only ones that are currently available for review (March 2013). As noted in the Summary Table 4-8, Items 13 and 15, we find that they are Satisfactory and would meet Good Utility Practice. We have noted that two of the test criteria and the penalties for not meeting the criteria are usually not found in specifications and contracts for other project that we have review; we find these extra provisions that are given in the Contract Documents very appropriate for the large size equipment. For our readers benefit, we repeat what the Project has accepted as its definition of Good Utility Practice as given in Schedule A of the Water Management Agreement and quote this definition as follows since it is succinctly stated:

“Good Utility Practice means those practices, methods or acts, including but not limited to the practices, methods or acts engaged in or approved by a significant portion of the electric utility industry in Canada, that at a particular time, in the exercise of reasonable judgment, and in light of the facts known at the time a decision is made, would be expected to accomplish the desired result in a manner which is consistent with laws and regulations and with due consideration for safety, reliability, environmental protection, and economic and efficient operations;”

4.16.1.1 Other Equipment

Currently there is no other equipment where performance test criteria are available for comment by the IE.

SECTION 5

CAPITAL BUDGET

This page intentionally left blank

SECTION 5

CAPITAL BUDGET

5.1 TOTAL PROJECT COST ESTIMATE

5.1.1 Cost Estimate Methodology

A deterministic approach based on both direct and indirect costs was followed by Nalcor Energy to arrive at the cost estimate. The cost estimate is comprised of three primary components that follow the Recommended Practice No. 10S-90 of the AACE. A base estimate for each of the cost items is developed that reflects the most likely current cost known associated with the project's specifications, basis of design, drawings and execution plan. The base estimate includes allowances for the identified, but un-quantified items.

To the base estimate, an estimated contingency is derived and added to it that includes variations associated with time or cost that are likely to occur but cannot be specifically identified at the time the estimate is prepared, but based on experience, will likely occur. The estimated contingency does not cover scope changes outside the parameters established for the project or control points for management of change (project execution plan and basis of design, for example) nor does it include natural disasters, strikes or escalation.

Finally, an escalation allowance is developed that provides for changes in price levels that is driven by economic conditions, including inflation. The escalation allowance is added to the base estimate including the estimated contingency, and is derived using economic indices associated with similar construction or type of product and system.

5.1.2 Evaluate Cost Estimate and Fixed Price Estimates

Currently under review. No comments are yet available.

5.1.3 Other Facilities

What is required and what does this include?

5.1.4 PM, Construction Contractors Experience

At the present time, we only have knowledge of the EPCM contractor and three other contracting groups of the contracts the Independent Engineer is required to review and report on. These entities are included in the following Table 5-1 with our remarks.

Table 5-1

CONTRACTOR'S EXPERIENCE

CONTRACT NO.	CONTRACT DESCRIPTION AND CONTRACTOR	REMARKS	OPINION OF INDEPENDENT ENGINEER
CH0006	BULK EXCAVATION HT O'CONNELL, EBJ, NIELSON, AND KEWIT	EACH OF THE CONTRACTORS IS WELL-KNOWN IN CANADA AND HAS THE FULL CAPABILITIES TO PERFORM THE ENTIER CONTRACT BY THEMSELVES. THE CONTRACTORS HAVE WORKED TOGETHER ON OTHER HEAVY CIVIL PROJECTS AND ALL HAVE WORKED ON HYDROELECTRIC PROJECT	SATISFACTORY
CH0030	TURBINES & GENERATORS DESIGN, SUPPLY AND INSTALL AGREEMENT ANDRITZ HYDRO CANADA INC.	ANDRITZ IS A TIER ONE SUPPLIER OF HYDRAULIC TURBINES AND ASSOCIATED EQUIPMENT. ANDRITZ HAS EXPERIENCE IN LARGE-DIAMETER KAPLAN TURBINES OF SIMILAR SIZE (9 METER SIZE)	SATISFACTORY
LC-SB-003	STRAIT OF BELLE ISLE SUBMARINE CABLE DESIGN, SUPPLY AND INSTALL NEXANS CABLE	NEXANS CABLE IS A TIER ONE DESIGNER, SUPPLIER, AND INSTALLER OF SUBMARINE CABLES WORLD-WIDE.	SATISFACTORY
EPCM	ENGINERING, PROCUREMENT, AND CONSTRUCION MANAGEMENT SNC-LAVALIN INC.	SNCL IS A TIER ONE ENGINEERING AND CONSULTING COMPANY WHO HAS DESIGNED AND MANAGED MANY	SATISFACTORY

		LARGE HYDROELECTRIC PROJECTS, THERMAL GENERATING STATIONS, AND NUCLEAR POWER PLANTS	

5.1.5 Major Equipment Procurement Costs

We have summarized in the tables below for each of the three projects, the major equipment costs associated with each of the projects found in the DG3 estimate. At the present time, only equipment costs associated with the Muskrat Falls Plant under CH0030 and with the submarine cable, LC-SB-003, are known (March 2013). We expect that we will be able to have a more complete summary for each of the projects as we near financial close and the submittal of the final Independent Engineer's Report.

The Independent Engineer has included columns in Table 5-16 to reflect what the actual contract price is for each of these items to allow a direct comparison to be made with the estimated price. Currently (March 2013) MWH has insufficient information to express any opinions pertaining to any underruns or overruns of the estimate, nor has information to fill in the table for the contract price except as shown.

Schedule of Values

The schedule showing by component the estimated base cost (DG3 Cost) for Muskrat Falls, Labrador Transmissions link Assets and Labrador-Island Link projects cash expenditure schedule and the accumulated cash flow is given in Figure 5-1 at the bottom of the table, which has been enlarged following the figure. This exhibit was copied directly from Decision Gate 3 Capital Cost Estimate, LCP-PT-ED-00000-EP-ES-0002-01, and clearly illustrates what Nalcor Energy predicts is the cash flow for the three different projects comprising their portion of the Lower Churchill Project. In the opinion of the Independent Engineer, we find this schedule to be reasonable and supported by Nalcor Energy's evaluation and analysis. We have not yet independently reviewed the schedule within the limitations of our Agreement.

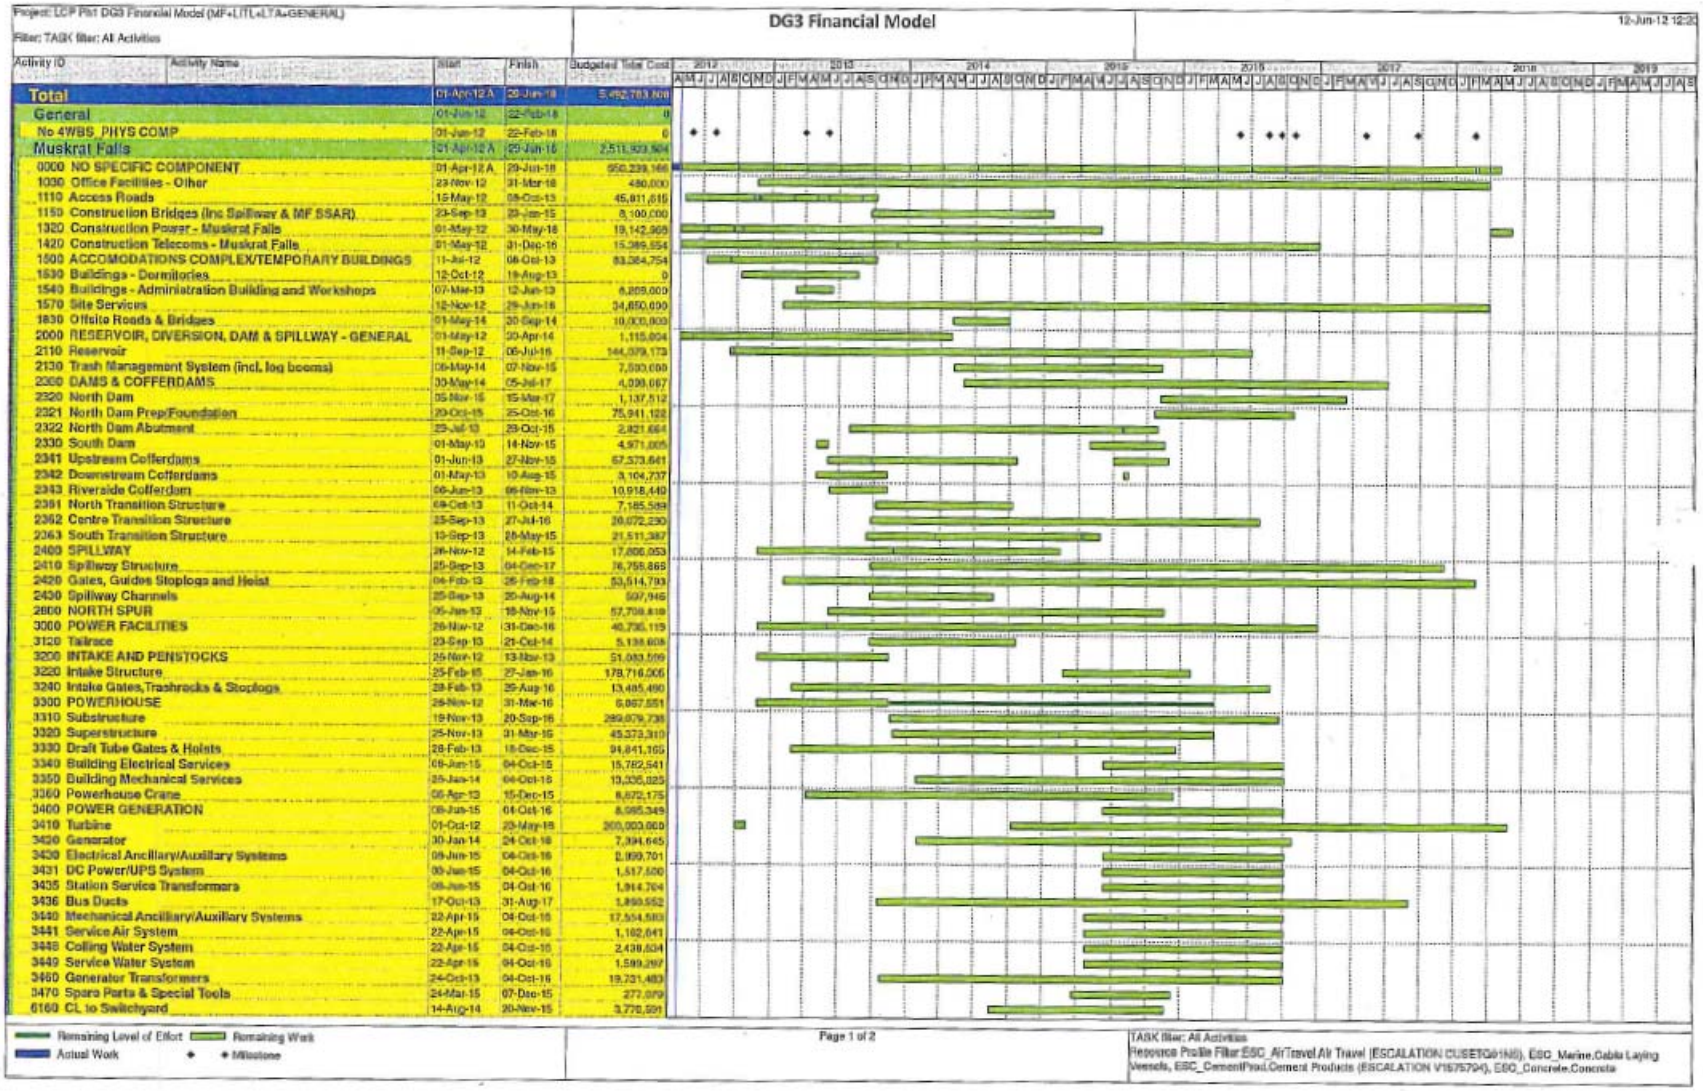

Figure 5-1 Schedule of Expenditures for Major Components of the Projects and Accumulated Cash Flow Projection

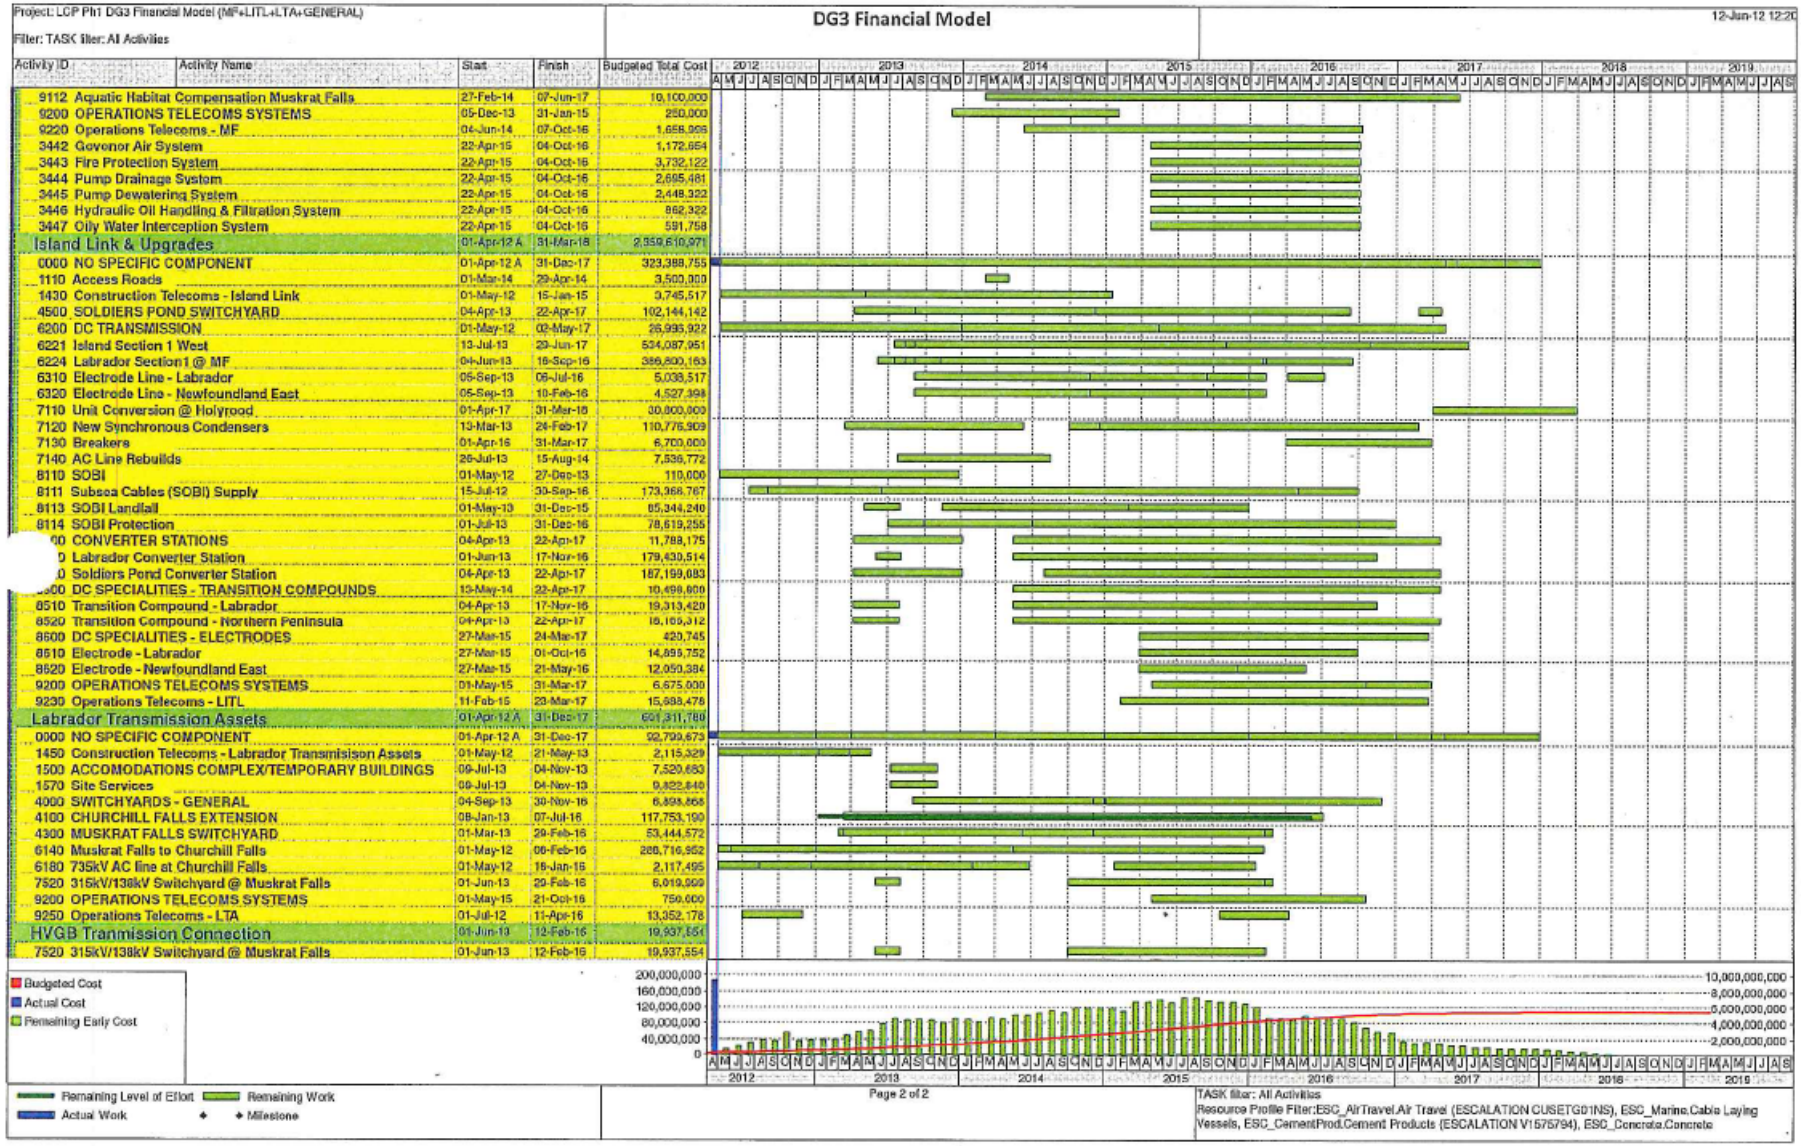

Figure 5-1 Schedule of Expenditures for Major Components of the Projects and Accumulated Cash Flow Projection (continued)

Enlargement of bottom section of Figure 5-1.

5.1.12 Allowance for Contractor Bonus

Bonuses, or performance incentives, are provided under the following contracts: CH0007

For Contract CH0007, the following incentives are offered:

ITEM NO	PERFORMANCE GOAL	BONUS	REMARKS	
1	**DIVERSION**			
1.1	IF CONTRACTOR ACHIEVES ALL OF THE MILESTONES M4,M5,M6,M7,M8,M9, AND M10 BY THE ASSOCIATED MILESTONE DATES LISTED IN THE MILESTONE SCHEDULE, Nalcor Energy WILL PAY A BONUS OF:	$6,000,000		
1.2	FOR EACH OF THE MILESTONES, M4, M5,M6, M7, M8, AND M9, IF CONTRACTOR ACHIEVES THE MILESTONE EARLIER THAN THE MILESTONE DATE AS LISTED IN THE MILESTONE SCHEDULE, NALCOR ENERGY WILL PAY A BONUS FOR EACH DAY THAT ACHIEVEMENT IS EARLY, UP TO A MAXIMUS OF 21 DAYS. FOR EACH MILESTONE, THE BONUS SHALL BE $50,000 PER DAY EARLY, TO A MAXIMUM OF $1,050,000	MAXIMUM BONUS PAYABLE, 6 MILESTONES $6,300,000		
2	**POWERHOUSE**			

ITEM NO	PERFORMANCE GOAL	BONUS	REMARKS	
	INTAKE STRUCTURE			
2.1	FOR EACH OF THE MILESTONES, M28, M36, M44, AND M52, IF CONTRACTOR ACHIEVES THE MILESTONE EARLIER THAN THE MILESTONE DATE AS LISTE4D IN THE MILESTONE SCHEDULE, NALCOR ENERGY WILL PAY A BONUS FOR EACH DAY THAT ACHIEVEMENT IS EARLY, UP TO A MAXIMUM OF 21 DAYS. FOR EACH MILESTONE, THE BONUS SHALL BE $50,000 PER DAY EARLY, TO A MAXIMUM OF $1,050,000	MAXIMUM BONUS PAYABLE, 4 MILESTONES: $4,200,000		
	TOTAL POSSIBLE BONUS FOR PERFORMANCE	**$16,500,000**		

5.1.13 Highlight Sensitive and Critical Areas

LATER

5.1.14 Comparisons

LATER

5.1.15 Price Risks

Nalcor Energy has discussed in the contracting philosophy their methods to quantity and manage price risks due to changing market conditions, inflation, labor issues, weather and hydrology issues, manufacturing space and equipment availability, delays in meeting milestones, and competition with other projects in Canadian Providences. The risk assessments they conducted following a multi-faceted Project Risk Management Plan using AACEI's recommended practice for price changes for major equipment they will purchase as well as the construction and installation contracts they and SNCL will administer appears to be carefully performed and was taken into consideration in their economic analysis. The CPM schedule was also integrated into the analysis to arrive at appropriate unit cost pricing.

Where appropriate, LDs, LCs and performance protection have also been used to protect Nalcor as well as bonus provisions for at least one contract (CH0007).

The contingences for each of the projects are given below in Table 5-18 for reference as follows:

Table 5-18

CONTINGENCIES DERIVED FOR EACH PROJECT

PROJECT	CONTINGENCY AMOUNT (P50)	REMARKS
MUSKRAT FALL GENERATING STATION	$226,700,000	ON HOLD
LABRADOR TRANSMISSION ASSETS PROJECT	$54,800,000	ON HOLD
LABRADOR-ISLAND TRANSMISSION LINK PROJECT	$86,500,000	ON HOLD
TOTAL	**$368,000,000**	

5.2 DRAWDOWN SCHEDULES

In order to opine on the reasonableness of the drawdown schedules for each of the contracts that MWH is required to review and comment on, we have prepared Table 5-19 wherein we have summarized our findings for each of the contracts. We note that even where we believe we have observed some payments in favor of the contractor or vendor, since the payment schedule was considered among many items in the consideration and award of the contract, other issues may override any unbalance we may observe.

Table 5-19

PAYMENT SCHEDULES FOR CONTRACTS REVIEWED

BY THE INDEPENDENT ENGINEER

PROJECT	CONTRACT NUMBER	PAYMENT SCHEDULE		REMARKS/COMMENTS
		NORMAL EXPECTED	UNUSUAL	
MF	CH0030			

To allow a more easy comparison to determine if the drawdown payment schedule is normal or unusual, we have plotted for each of the schedules we have been asked to review. A composite plot is given in Figure 5-2 below for contract CH0030, which has three currencies to consider.

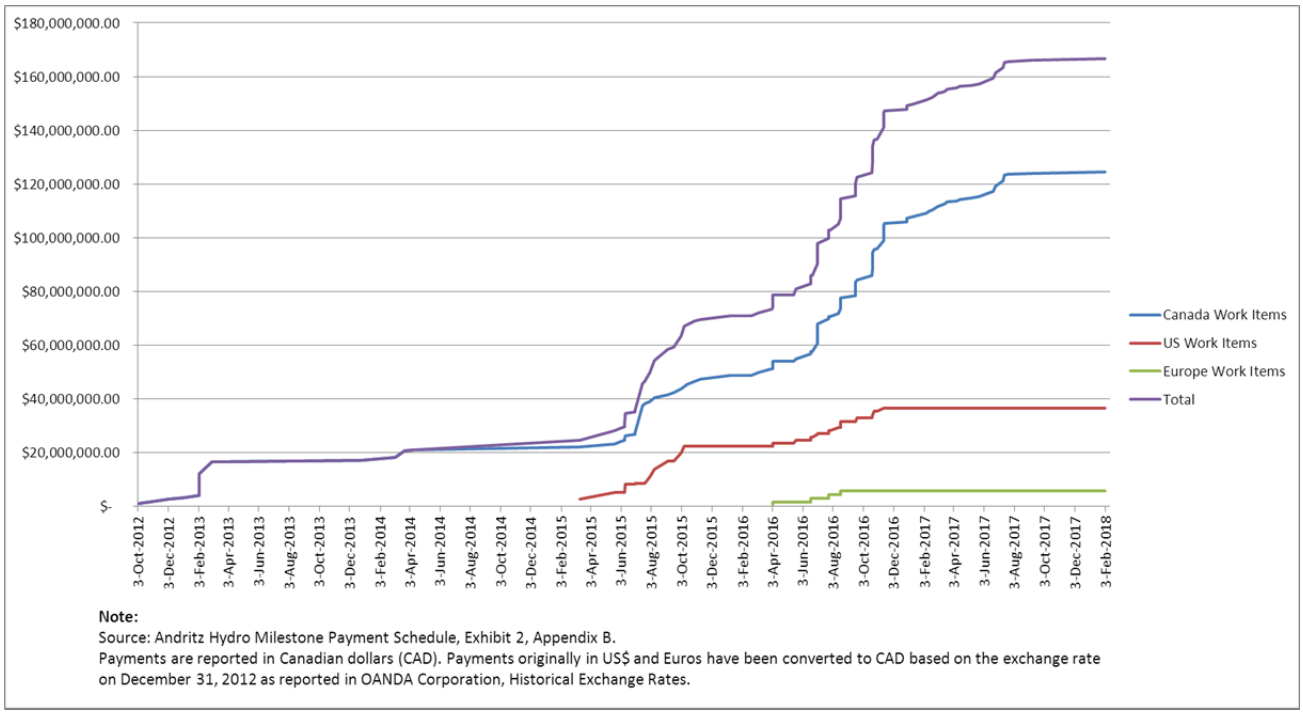

Figure 5-2 Composite Plot of Drawdown Payment Schedule – Contract CH0030

SECTION 6

COMMERCIAL OPERATION AND MAINTENANCE SERVICES

This page intentionally left blank

SECTION 6

COMMERCIAL OPERATION AND MAINTENANCE SERVICES

6.1 OPERATIONS AND MAINTENANCE PLAN

6.1.1 Commercial Operation Services

Nalcor Energy plans to use outside services to assist them in operating and maintaining the terminal station extension at Churchill Falls according to Nalcor's O&M Philosophy document. The Churchill Falls Labrador Corporation will be responsible for the operation and maintenance of this facility.

Nalcor Energy plans to operate the other components of the Project they are constructing and financing by themselves or through subsidiary companies establish for taxing and legal reason.

6.1.2 Adequacy of Start-Up and Long-Term Procedures

6.1.3 Reasonableness of Annual Operations and Maintenance Budget

6.1.4 Reasonableness of Operation and Maintenance Fee

6.1.5 Proposed Training Budget

6.2 OPERATIONS AND MAINTENANCE COST ESTIMATE

6.2.1 Completeness

6.2.2 Assumptions

6.2.2.1 Nalcor Energy's O&M strategy is to operate Muskrat Falls, terminal and converter stations at soldiers Pond and Muskrat Falls, terminal station extension at Churchill Falls, AC transmission lines in Labrador, DC transmission lines in Labrador and Newfoundland and the SOBI crossing and transition stations remotely from Nalcor's ECC in St. John's and by local staff as required.

6.2.2.2 Routine maintenance, condition and performance monitoring, inspection, adjustment and minor repairs will be performed by Nalcor staff working at the facilities, or located nearby in other Nalcor facilities.

6.2.2.3 Major maintenance and repair, specialized inspections, tests and adjustments will be performed by contractors through various arrangements depending on the service to be provided.

6.2.2.4 Support services including technical, environmental, accounting, budgeting, financial reporting, procurement, human resources, legal, ETC will be provided from Nalcor headquarters in St. John's.

6.2.2.5 Staffing requirements are discussed in the tables, below, and were provided by Nalcor.

6.2.2.6 Nalcor has advised MWH that as the design is refined and more specific details are finalized, the staffing requirements will be reviewed and if needed, adjusted.

6.2.3 Reasonableness Of Assumptions

6.2.4 Staffing

Contained within Nalcor Energy's Operations and Maintenance Philosophy document, LCP-PT-0000-PM-00010-01 are summary tables that designate the positions, number of personnel, and classification/expertise that are required for each of its major facilities found in the document for the Lower Churchill Project. We have included below in table form several of these tables for the principal facilities as reported by Nalcor.

Table 6-1

STAFFING REQUIREMENTS PROPOSED FOR MUSKRAT FALLS FACILITY

POSITION	NO. REQUIRED	CLASSIFICATION/EXPERTISE	REMARKS
PLANT MANAGER	1	ELECTRICAL/MECHANICAL ENGINEER	
PLANT ENGINEER, ASSET SEPCIALIST	1	ELECTRICAL/MECHANICAL ENGINEER	
TECHNCIAL SUPERVISOR	1	P&C/OPERATIONS/MECHANICAL/ ELECTRICAL-TRADES & TECHNOLOGY	
TECHNCIAL OPERATOR	4	P&C/COMMUNICATIONS/OPERATIONS/MECHANICAL/ELECTRICAL-TRADES & TECHNOLOGY	
UTILITY WORKER	2	GENERAL MAINTENANCE

STAFFING REQUIREMENTS PROPOSED

FOR

MUSKRAT FALLS, ISLAND LINK AND MARITIME LINK FACILITIES

POSITION	NO. REQUIRED	CLASSIFICATION/EXPERTISE	REMARKS
SYSTEM OPERATOR	5	ELECTRICAL TECHNOLOGY	
SYSTEM PERFORMANCE	1	ELECTRICAL ENGINEERING	
OPERATIONS PLANNING	1	ELECTRICAL ENGINEERING	
GENERATION COORDINATOR	1	ELECTRICAL OR HYDROTECHNICAL ENGINEER	
TOTAL MF;LITL;ML	**8**		

The Independent Engineer notes that the staffing includes provisions for the Maritime Link facilities that are believed to be just those that deal with the Nalcor assets **[Nalcor to verify that it is only Nalcor's assets and the Emera will provide staff too; also, how will this interface be managed???].**

According to Nalcor's O&M Philosophy document, the Churchill Falls Labrador Corporation will be responsible for the operation and maintenance of the terminal station extension at Churchill Falls.

Table 6-3

STAFFING REQUIREMENTS PROPOSED

FOR

MAINTENANCE OF TRANSMISSION LINES, ELECTRODE LINE, SHORE LINE POND ELECTRODE, DISTRIBUTION LINES AT MUSKRAT FALLS AND ASSOCIATED FACILITIES IN LABRADOR WILL BE THE RESPONSIBILITY OF TRO LABRADOR. 6.2.6 Administrative Costs

6.2.7 Management Fees

6.2.8 Consumables

6.3 NALCOR ENERGY'S RELIABILITY STATISTICS

In the review of information furnished MWH by Nalcor Energy, we found information that is germane to consider for this review in document: LCP-PT-MD-0000-AM-PH-0001-01, REV.B1, Appendix XIV: Reliability Statistics. Nalcor's regulate utility, Newfoundland and Labrador Hydro has been a member of the Canadian Electricity Association (CEA) for many years and for the period year-2006 to year 2010 report period which is tabulated below for reference, is a good source of data pertaining to the reliability of their projects compared to the other utilities in the grouping they are a member of.

Table 6-9

RELIABILITY STATISTICS

YEARS 2006-2010

PARAMETER	CEA AVERAGE	NLH AVERAGE	NORTH AMERICAN ELECTRIC RELIABILITY CORPORATION *Generating Availability Data System* (2007-2011) AVERAGE VALUE IS:[8]
FOR (FORCED OUTAGE RATE)1	2.60%	0.79%	5.79%
DAFOR (DERATE ADJUSTED FORCED OUTAGE RATE)[2]	2.74	0.96	ON HOLD

POF(PLANNED OUTAGE FACTOR)[7]	5.41	6.59	8.46

NOTES: 1. A measure of the time a unit is unable to operate because of a problem.

2. A measure of the time a unit is unable to operate, or is able to operate but not at rated capacity, because of a problem.

3. The probability that a unit will not be available, or is available but not at rated capacity, when required.

4. A measure of the total outage time for a unit.

5. The rate at which a unit encounters a forced outage.

6. A measure of the total maintenance outage hours for a unit.

7. A measure of the planned maintenance outage hours for a unit.

8. Values in table were computed by MWH using the GADS data.

Nalcor draws the following conclusion: "The table indicates that the generating equipment operated by Newfoundland and Labrador Hydro performs very well compared to the other Canadian utilities." Based on the numbers presented in the Table 6-9, the Independent Engineer concurs with this observation.

The IE has also added values taken the North American Electric Reliability Corporation, Generating Availability Data System (GADS) for the about the same period of time for comparison purposed. Based on these values which have a much broader base but include plants in the Southern and Western portion of the USA, we find LATER).

Based on the above data, the Independent Engineer is of the opinion that the expected performance of Nalcor Energy and the companies it has established to operate and maintain the Lower Churchill Project assets are expected to be at least as reliable as the CEA average and is satisfactory.

SECTION 7

PROJECT AGREEMENTS

7.1 POWER PURCHASE AGREEMENT

7.1.1 Full Energy and Capacity Payments

THIS AGREEMENT IS NOT AVAILABLE FOR REVIEW

7.1.2 Dispatch Power

THIS AGREEMENT IS NOT AVAILABLE FOR REVIEW (FEBRUARY 2013)

7.2 INTERCONNECTION FACILITIES AGREEMENT

This agreement is not available for review

7.3 WATER MANAGEMENT AGREEMENT

The Water Management Agreement, between Nalcor Energy and Churchill Falls (Labrador) Corporation Limited was ordered by the Board of Newfoundland and Labrador Board of Commissioners of Public Utilities, No. P.U. 8(2010) on March 9, 2010. The intent of this Agreement is to manage and operate facilities within the Province the most efficient way for the production, transmission and distribution of Power and Energy, and be assessed and allocated and re-allocated in the manner that is necessary to affect such a policy. As such, the Agreement objective "….shall be the coordination of the Power generation and Energy production in the aggregate for all Production Facilities on the Churchill River to satisfy the Delivery Requirements for all Suppliers, in a manner that provides for the maximization of the long term Energy-generating potential of the Churchill River, while ensuring that the provisions of any Prior Power Contracts are not adversely affected."

The Agreement requires the establishment of a Water Management Committee of four members selected by the parties, and the Committee is required to appoint an Independent Coordinator which may be one or more persons.

The duties of the Independent Coordinator shall "…establish short and long term Production Schedules for all Production Facilities on the Churchill River, through the coordination of production scheduling of the Suppliers based upon the use of the aggregate generating Capability, storage and transmission facilities of any supplier on the Churchill River.

The Independent Coordinator is required to determine the total Power to be produced and is required to determine and prepare the production Schedules which shall specify the amount of Power to be produced by each Supplier's Production Facilities in accordance with the provisions

of the Agreement. The Independent Coordinator is required to determine the energy storage and energy losses assignments for each of the suppliers in accordance with the terms of the Agreement. The procedure under which this is accomplished and the calculations necessary to do so are described in Annex "A" to the Agreement to appropriately assign energy storage amounts and energy losses to each Supplier. Energy benefits for each of the suppliers are also described therein.

The term of the Agreement is discussed in Article 12 of the Agreement and will continue in full force until the earliest of the "....(i) the permanent cessation of all operations at either of the CF(L)Co Production Facilities or the Nalcor Production Facilities, and (ii) any earlier date agreed to by the Suppliers, subject to the execution of a new water management agreement agreed to by the Suppliers and approved by the Board pursuant to Subsection 5.4(3)(a) of the Act.

In the opinion of the IE, the Agreement is similar to other agreements where compensations must be allocated to generation facilities that share the resources of a river basin and is found to be satisfactory.

7.4 WATER LEASE AGREEMENT

The Water Lease Agreement, between Nalcor Energy and Newfoundland and Labrador was made March 17, 2009. It gives Nalcor Energy the exclusive use of all that part of the Churchill River below the 425-foot-contour line and that part of the Churchill River below Elevation 425, downstream to the intersection of the Churchill River with the meridian of 60 degrees-45 minutes West of Greenwich and includes all waters that originate within the Churchill River catchment area and all rivers that naturally flow within the catchment area. It also gives Nalcor the right to flood those areas held by the Lease. The period of the lease is for 50 years.

The Government has reserved rights of the public to use the Lower Churchill River for the purpose of fishing, shooting, hunting, trapping, logging and travelling. It places restrictions on the public that would constitute a hazard to Nalcor Energy where it would create an operation concern.

The lease gives Nalcor Energy the exclusive right to store and regulate so much of the Lower Churchill River that is economic or beneficial for the purpose of developing the Lower Churchill River.

Nalcor Energy may be required to install, operate and maintain stream flow, water level monitoring stations and other measuring measures including level of quality at designated locations. Copies of records can be provided, as requested, at least once per year.

Nalcor Energy is required to pay to the Government $2.50 per megawatt hour of power generated each year from their facilities. This rate can be adjusted every year based on the Consumer Price Index (CPI, Canada, All-items) as established under the Statistics Act of Canada.

The records must show the rates and amounts of water used on a daily basis for the generation of hydroelectric power, rates and amounts of water spilled or released downstream, operating water levels, extent of the flooded area, and additional related information requested by Government. Submittals are to be made at the end of March each year to the Water Rights Section of the Department of Environment and Conservation.

7.5 FUEL SUPPLY AND TRANSPORTATION AGREEMENT

In the opinion of the IE, this is a carryover clause from a thermal power project requirement for an IE Report and is not applicable for this report

7.6 O&M AGREEMENTS

How many agreements is Nalcor planning on? One for each of the projects: MF; LTA; AND LITL?

The agreements are not available for review

7.6.1 Term and Termination Provisions

7.6.2 Budget Review and Control

7.6.3 Owner and Operator Responsibilities

7.6.4 Operations and Maintenance Plans

7.6.5 Environmental Compliance Plans

7.6.6 Reporting Procedures

7.6.7 Compensation and Incentive Bonus

7.6.8 Consistency

7.7 LOAN DOCUMENTS

The term sheet prepared by Nalcor is available but the loan documents are not available for review until financial close

Since the Government of Canada will receive the IE report prior to financial close, how will the IE's review be possible? MWH believes this subsection, 7.7 should not be included in the IE's Report. This work should really be assigned to the financial advisors of the Government of Canada, in our opinion.

7.7.1 Terms of a Budget Review and Approval Process

We require an explanation as to what this means

7.7.2 Review Owner/Operator Reporting Requirements

We require an explanation as to what this means

SECTION 8

REVIEW PERMITS AND LICENSES

SECTION 8

REVIEW PERMITS AND LICENSES

8.1 PROJECT-WIDE ENVIRONMENTAL PROTECTION PLAN

As part of MWH's review of permits and licenses, we reviewed the Project-Wide Environmental Protection Plan-Component 1 and 4b (P-WEEP) provided to us by Nalcor Energy. Our copy notes a date of January 24, 2013, which is believed to be the most current edition of the Plan. The Plan succinctly provides the basis for which all work practices must follow to mitigate negative environmental effects associated with construction and commissioning of the Lower Churchill Project. The plan lays out those requirements that can be found in the following sections of the P-WEEP:

- INTRODUCTION
- PROJECT DESCRIPTION
- ROLES AND RESPONSIBILITIES
- RELEVANT LEGISLATION
- GENERAL ENVIRONMENTAL PROTECTION PROCEDURES
- ENVIRONMENTAL MONITORING AND FOLLOW UP
- CONTINGENCY PLANS
- FORMS
- REFERENCE DOCUMENTS
- REGULATORY CONTACT LIST.

The Plan includes an extensive number of figures and several tables that illustrate examples of what is typically acceptable or unacceptable practice and presents examples of recommended mitigation methods. The Plan lists in considerable detail the General Environmental Protection Procedures recommendations that are to be followed for the Project which forms the essence of the Plan. The Plan provides to those monitoring the progress of the Work the necessary guidelines and information to successfully inform others as to the acceptability of the Work being performed in a satisfactory manner in compliance with the Plan. Sample forms are provided in Section 8 of the Plan, as noted above, to track the activities where environmental monitoring is prescribed. The forms provide a historic record for regulatory review, as may be required in the permits issued to Nalcor, as well as its contractors. In the opinion of the Independent Engineer, the Plan, itself, is comprehensive and suitable, and is judged to be satisfactory for the Project.

Legislation that is relevant to the design and construction of the Project includes numerous regulatory requirements that are under the jurisdiction of federal, provincial and municipal

entities. The Project adopted Nalcor Energy's Corporate Environmental Policy and Guiding Principles and its Environmental Management System which meets the requirements of ISO 14001:2009. Listed in Table 8-1 are the acts and regulations that apply to the Project as identified by Nalcor Energy as being applicable.

MUNICIPAL	WHERE CONSTRUCTION TAKES PLACE WITHIN MUNICIPAL BOUNDARIES, LOCAL BYLAWS ARE REQUIRED TO BE COMPLIED WITH AND PERMITS OBTAINED	THE IE REQUIRES THESE AREAS TO BE IDENTIFIED AND THAT THE BYLAWS AND PERMITS BE IDENTIFIED FOR INCLUSION IN THE REPORT. IN RESPONSE TO A QUESTION FROM THE IE ABOUT MUNICIPAL APPROVAL, NALCOR ADVISED THAT THERE ARE NO ACTIVITIES CURRENTLY PLANNED THAT REQUIRE MUNICIPAL APPROVAL. THE PROVINCIAL LEGISLATION ALLOWS THE USE OF LAND FOR PROJECT ACTIVITIES WITHIN MUNICIPALITIES. WASTE MANAGEMENT CONSULTATION IS ONGOING AND THE GOVERNMENT OF NEWFOUNDLAND AND LABRADOR IS CURENLY IMPLEMENING A REGIONAL WASTE MANAGEMENT STRATEGY IN MOST JURISDICITONS.
		THE INDEPENDENT ENGINEER AT THIS TIME CAN NOT OPINE ON ANY PERMITS AND LICENSES THAT ARE INVOLVED WITH THE LITL SINCE THEY HAVE

AUTHORITY	ACTS AND REGULATIONS	COMMENTS
		NOT BEEN PROVIDED TO MWH. THESE PERMITS AND LICENSES WILL BE REQUIRED BEFORE FINANCIAL CLOSE. NALCOR HAS BEEN REQUESTED TO PROVIDE THESE ITEMS

Nalcor reports that the total cost of obtaining permits, as reported in DG#3 estimate as given in Doc. #: LCP-PT-ED-0000-EP-ES-0001-01, Rev. B1 is $115,723.24. Table 23-6 of this document lists the cost of the Permits and associate Fees that were known at that time.

8.2 REVIEW OF PERMITS AND LICENSES AND APPROVALS

Based on our initial review of the documents furnished and those that are available on the Nalcor Energy website for the Project, we have summarized our findings of representative permits that currently are available for review. This summary is contained in Table 8-2, below. We realize that additional documents will be made available as they are prepared and issued for the LITL that will require further sampling to ascertain the information to form the Independent Engineer's opinions.

LCP-AM_CD-0000-EA-RP-0014-01	Fish Habitat Compensation Strategy	DRAFT		pg. 58-60: Would be helpful to have a map showing the various reaches referred to in the Total Phosphorous graphs. Reaches appear to be different from those shown in Figure 3.2. Nalcor Comment: Nalcor advised by DFO to keep additional figures to minimum; the reaches, as MWH notes are slightly different, however, they are known to the regulators. pg. 95: Figure 3.24 shows general cut and fill associated with Delta Compensation Works. Biological function of the delta habitat would likely improve if the placed excavated material elevations paralleled the original ground profile rather than being uniformly

Document Reviewed			Reviewer's Assessment and Nalcor Comments	
Document No.	Title	Status	Complete / Incomplete	Questions / Comments
				horizontal. Nalcor comment: Agree with the comment,, however, based on constructability and past experience, they selected least-cost solution recognizing that ice and high flows will modify the sections during post-construction. Fine sediments (i.e., silts and fine sands) would need to comprise <15-18% of the substrate composition if the proposed deltas are to be effective as spawning habitat for most fish (i.e., redd builders and broadcast spawners). It's mentioned that wave action will act to 'clean' the sediments in the new near shore terraces (pg. 96) that will be constructed for habitat compensation. Are all proposed terrace sites subject to sufficient wave action to ensure substrates remain functional for successful fish spawning / incubation? Will the benefits of wave action be outweighed by the effect of waves on shoreline stability/erosion and consequent sediment inputs to those habitats? The Edward's Brook (pg. 100) delta is located in a relatively protected bay. Will tributary discharges be sufficient to scour fine sediments and maintain the spawning function proposed for all the proposed new delta Compensation areas? For example, it appears unlikely that the Metchin River area (pg. 105), Minipi River (pg. 106), Elizabeth River (pg. 107), and West Mechin River (pg. 108) discharges will maintain spawning function within the entire area of the constructed deltas.

Document No.	**Title**	**Status**	**Complete / Incomplete**	**Questions / Comments**
				pg.102: Does the Gull Island Plateau have groundwater upwelling? If it doesn't then brook trout spawning would be unlikely due to the importance of groundwater upwelling for selection of their spawning locations. Nalcor Comment: This is potential physical habitat construction option and is not included in the Fish Habitat Compensation Plan. It is being considered relevant for ongoing compensation considerations. Nalcor also includes a lengthy additional paragraph regarding this matter that is not included herein, for brevity.
TF8110486_LCD_ DRAFT Compensation_Plan _Dec2020_12_Rev 4[1]	Draft Fish Habitat Compensation Plan, Muskrat Falls Rev 4 Dec 2012	DRAFT		pg. 43: Predicted use of shoals for brook trout spawning will be unlikely due to the importance of groundwater upwelling for selection of their spawning locations. Also, what is the predicted functional life (i.e., number of years) of these shoals as viable spawning / incubation areas given the relatively low velocities and high water depths (see Table 5.5, pg. 40) and the predicted increase in TSS for the initial 10-15 years? pg. 49-50: Predicted use of deltas for brook trout spawning will be unlikely due to the importance of groundwater upwelling for selection of their spawning locations. Nalcor comment: Comment similar to above comment on upwelling RP-0014 pg. 51: Figure 5.14 shows general

				cut and fill associated with Delta Compensation Works. Biological function of the delta habitat would likely improve if the placed excavated material elevations paralleled the original ground profile rather than being uniformly horizontal. Nalcor Comment: Comment similar to above comment in RP-0014 pg. 53-54: Will high frequency flood discharges in Pinus River be sufficient to scour fine sediments and maintain the spawning function of proposed new delta Compensation area? What proportion of the delta is expected to be 'flushed' of fine sediments during a higher frequency event such as 2 yr. event? Nalcor Comment: Yes. Mean annual spring flows are pro-rated at 90 cms. Table 5.8 shows that at a discharge of 55 cms has the potential to flush up to 1 cm diameter material. A 2yr event would be assumed to be of this magnitude. "..therefore, most of the delta is anticipated to flush, although there will be areas of deposition. Exact extent of substrate redistribution will not be known until monitoring begins after inundation." pg. 58: Have any habitat compensation options for improving / creating spawning and rearing habitat been explored within the cross section of the existing tributaries upstream of the FSL?

Document Reviewed			Reviewer's Assessment and Nalcor Comments	
Document No.	Title	Status	Complete / Incomplete	Questions / Comments
				Nalcor Comment: Yes. As part of the stakeholder consultation process (both Framework and strategy stages) all potential options were presented, and on the table, including compensation outside the entire watershed as well as areas of existing tributaries upstream of the FSL. It was indicated by some stakeholders, similar to other projects in Labrador, that any extension of physical works outside the proposed project area would be an extension of the project footprint. Therefore, compensation options were directed at fish species within the reservoir with physical construction constrained within the reservoir boundary. pg. 63: If slope in Tables 5.7 and 5.8 is in percent (as stated), then Incipient Particle Diameters (cm) should be divided by 100. Similarly, potential calculation error in Table 5.09 and 5.10. For the tractive force equation in Newbury and Gaboury (1993), slope is measured as m/m. Nalcor Comment: Correction required. The values of slope are in m/m however the column headings for slope in Tables 5.7 and 5.9l indicate %. The headings have been revised. pg. 83+88: Grain size analysis should also be done at some spawning redd sites to determine percent fines and therefore the suitability of the substrate for incubation. Nalcor Comment: As stated on page 87, grain size distributions

Document Reviewed			Reviewer's Assessment and Nalcor Comments

				will be determined for material placed in each delta so that they can be used to determine the degree of substrate shifting and movement. The geotechnical programs have provided data related to existing material as well and will be used for comparisons. Baseline samples of existing instream material can be collected in 2013 and added to the material baseline.
TF1010486_LCHG EEM_Rev3_Dec2012[1]	Aquatic Environmental Effects Monitoring Program Dec 2012	DRAFT		Generally, the proposed EEM program appears to be quite comprehensive and appropriate in breadth for monitoring effects downstream of Muskrat Falls dam. pg. 27: The frequency and intensity / duration of field sampling events of, for example, turbine entrainment, fish habitat utilization, and fish population assessments, in the mainstem and tributaries should be clearly stated or shown in a table. pg. 43: Why is the trigger for injury/survival rate not provided? Will it be established prior to conducting the monitoring?

Responses to our questions and comments on Permits, Fish Compensation Strategy, Draft Fish Habitat Compensation Plan and Aquatic Environmental Effects Monitoring Program were provided by Nalcor in response to our requests. We acknowledge that our questions pertaining to these four subjects were satisfactorily answered by Nalcor and, in our opinion, conclude that the adopted approach is satisfactory.

Included in Appendix H section of this report is a complete list of the permits and licenses as provided to the Independent Engineer, which is current to March 2013. Additional permits will be required for the LITL that are not yet included on the list. We also note that Nalcor Energy advises that all permits are current. We have not independently checked to verify that this represents the current conditions and have not directly talked to Government Agencies about any of the permits, relying solely on the input we receive from Nalcor Energy.

MWH plans to review representative studies and the year-2013 budget amounts with Nalcor representatives and Agency personnel to allow us to better understand the scope of the study and required budget to allow us to give an opinion on the adequacy of the budget.

8.3.2 Studies to be Performed During Construction

Require Nalcor to furnish information and budgets. [LEAVE PLACE FOR TABLE 8-4.]

Table 8-4

STUDIES TO BE PERFORMED DURING CONSTRUCTION

8.3.3 Studies to be Performed During Project Operation and Environmental Monitoring

Nalcor has furnished budget estimates for funding programs/studies associated with environmental issues that will be conducted during the operating period of the project (current dollars). A summary of this information is contained in Table 8-5. [Comments by MWH will be furnished later.]

This page intentionally left blank.

Table 8-5

ENVIRONMENTAL PROGRAMS/STUDIES AND MONITORING COSTS

OPERATIONS PERIOD

Program	Year 1-5	Year 5-10	Year 10-15	Year 15-20	Year 20-25	Component	Comments
Bank Recession Rates downstream	$375,000	$375,000				MF	$75,000 per year up to year 10 and then assumed no longer required. Could be modified based on monitoring results
Bank Erosion with the Reservoir	$625,000	$625,000				MF	$125,000 per year up to year 10 and then assumed no longer required. Could be modified based on monitoring results
Sediment Transport	$375,000	$375,000				MF	$75,000 per year up to year 10 and then assumed no longer required. Could be modified based on monitoring results
Ice Formation - Reservoirs, downstream including Mud Lake	$100,000	$50,000				MF	2x year first 5 years (10,000 per trip including helicopters). Frequency after TBD based on results of monitoring. Assume 1 x per year for year 5 through 10 and then no further monitoring

Program	Year 1-5	Year 5-10	Year 10-15	Year 15-20	Year 20-25	Component	Comments
							required.
Water Quality Monitoring	$1,250,000	$625,000	$200,000	$200,000	$200,000	MF	For first 5 years use current then scale back based on monitoring results to gradually phase out system. Some level of monitoring to at least 25 years (nutrient levels predicted to return to background)
Green House Gas Flux	$30,000					MF	Cost of equipment - $20,000. High degree of confidence in prediction. Can be measured via plant staff so limited additional cost after installation.
Fish Habitat utilization upstream and Downstream	$750,000	$300,000				MF	Seven years required for Granite Canal authorization. Depends of monitoring results. Based on baseline monitoring
Nutrient Levels upstream and downstream	$500,000	$200,000				MF	Seven years required for Granite Canal authorization. Depends of monitoring results. Based on baseline

Program	Year 1-5	Year 5-10	Year 10-15	Year 15-20	Year 20-25	Component	Comments
							monitoring
Fish Growth, condition, fecundity, trophic feedings and age structure upstream and downstream	$750,000	$300,000				MF	Seven years required for Granite Canal authorization. Depends of monitoring results. Based on baseline monitoring
Entrainment	$75,000					MF	One time study. Assume results are acceptable.
Compensation Works for substrate placement, habitat stability	$500,000	$200,000				MF	Seven years required for Granite Canal authorization. Depends of monitoring results. Based on baseline monitoring
Benthic macro-invertebrates, primary and secondary productivity, and fish health and habitat utilization in reservoir	$500,000	$200,000				MF	Seven years required for Granite Canal authorization. Depends of monitoring results. Based on baseline monitoring. Based on 3 trips per year.
Monitoring Wetland habitat creation and development success	$500,000	$500,000				MF	Assume similar requirements as FHCP. 10 year monitoring program.
Methylmercury levels in river otter	$125,000					MF	Based on baseline monitoring costs. Not predicted to be an effect so monitoring will only be required for first

Program	Year 1-5	Year 5-10	Year 10-15	Year 15-20	Year 20-25	Component	Comments
							5 years to confirm predictions. May be revised based on monitoring results.
Monitoring of osprey methylmercury levels through feather collection	$125,000					MF	Based on baseline monitoring costs. Not predicted to be an effect so monitoring will only be required for first 5 years to confirm predictions. May be revised based on monitoring results.
Telemetry monitoring of black bears (included relocated bears)	$100,000					MF	Based on baseline monitoring costs. Not predicted to be an effect so monitoring will only be required for first few years to confirm predictions. May be revised based on monitoring results.
Aerial surveys to monitor the effectiveness of the beaver relocation program	$100,000					MF	Based on baseline monitoring costs. Not predicted to be an effect so monitoring will only be required for first few years to confirm predictions. May be revised based on monitoring results.

Program	Year 1-5	Year 5-10	Year 10-15	Year 15-20	Year 20-25	Component	Comments
Monitor relocated osprey nests	$100,000					MF	Based on baseline monitoring cost. Should determine success within first 2-3 years. High degree of confidence that no significant effect. Extensive experience with technique.
Winter and summer ground surveys of wildlife habitat association transects established as part of baseline to examine changes to distribution and abundance, will be conducted for furbearers and other wildlife	$200,000	$200,000				MF	Based on baseline monitoring costs. Not predicted to be an effect but may be longer term in terms of seeing effects. Monitoring may be required for first 10 years to confirm predictions. May be revised based on monitoring results.
Forest avifauna will be monitored for changes in distribution and abundance by resurveying along transects established in 2006 and 2007	$200,000	$100,000				MF	Based on baseline monitoring costs. Not predicted to be an effect but may be longer term in terms of seeing effects. Monitoring may be required for first 10 years to confirm predictions. May be revised based on monitoring results.

Program	Year 1-5	Year 5-10	Year 10-15	Year 15-20	Year 20-25	Component	Comments
Moose will be monitored using winter aerial surveys and/or GPS telemetry of moose in key wintering areas and areas where habitat is altered	$200,000					MF	Based on baseline monitoring costs. Not predicted to be an effect so monitoring will only be required for first 5 years to confirm predictions. May be revised based on monitoring results.
Assessment of trapping data post project will be conducted	$50,000					MF	Desk top review to confirm effects prediction. $10,000/year for first 5 years.
Methylmercury levels in the reservoirs will be monitored. Monitoring will include fish in the lower Churchill River, Goose Bay and Lake Melville. Monitoring will also include seals downstream of Muskrat Falls.	$400,000	$400,000	$400,000	$400,000	$400,000	MF	$75,000/year based on baseline program costs (upstream and downstream). Maybe scaled backed based on results but predicted to take 25 years to return to baseline levels.
Total MF	$7,930,000	$4,450,000	$600,000	$600,000	$600,000		
Monitor the effects on listed plants or induced effects resulting from improved access.	$50,000					LIL	Limited area to be monitored

Program	Year 1-5	Year 5-10	Year 10-15	Year 15-20	Year 20-25	Component	Comments
Monitoring of any compensation works as a result of Harmful Alteration, Disruption or Destruction (HADD) of marine fish habitat will be conducted according to a protocol acceptable to DFO. Initial monitoring (as-built monitoring) will be conducted to provide information on the structure of the compensation works, and subsequent effectiveness monitoring will also include a biological component to provide some measure of productivity occurring at the compensation works.	$600,000	$200,000				SOBI	Monitoring of the rock berms will be done using a remotely operated method such as ROV. $200 000 for data collection, data analysis and report preparation x 4 years (Year 2, 3, 5, &7) = $800,000

Assumptions

- Based on review of Generation EIS limited monitoring for Labrador Transmission Assets

- Based on review of LIL EIS there are limited commitments for the overland transmission. Subject to conditions of EA release (i.e. assume no freshwater habitat monitoring for DFO)

This page intentionally left blank

8.3.5 Mitigation During Construction

Nalcor to furnish budget for possible mitigation of environmental issues during construction. [LEAVE PLACE FOR TABLE 8-6.]

Table 8-6

MITIGATION DURING CONSTRUCTION

8.4 ENVIRONMENTAL FLOW

To maintain and provide environmental habitat downstream of the Project, studies were performed to establish the minimum flow release required from the Muskrat Falls facilities when the power station was shut down. Usually these studies employ in stream flow incremental methodology (IFIM) techniques requiring habitat assessment at numerous cross sections along the river and for different depths of water that relate to flow releases. These assessments in turn are related to the requirements of different fish species to arrive at the most desired range of depth, associated with the amount of habitat in which the fisher can be sustained. Information provided to MWH indicates that the minimum release flow established for the project (the environmental flow) is 350 cms. We have not independently reviewed the data to support this determination of minimum flow and have requested it from Nalcor Energy for our review and subsequent independent opinion as to it being adequate to maintain the fishery.

During the period while the reservoir is filling, estimated to be about 10 to 12 days, releases will be made that amount to 30% of the normal flow for the period. Once the reservoir is filled to full surface level (FSL), flows will be released equal to the inflow. The reservoir during the winter period will be maintained at El 25 meters, and during the spring, summer and fall at EL 24 meters.

8.5 ASSESS TECHNICAL REQUIREMENTS AND CONSTRAINTS

MWH requests clarification on what is needed to address this section of the report from Nalcor

8.6 ESTABLISH CONTACT WITH GOVERNMENT

The Independent Engineer has not established a contact with Government since we are waiting to be transferred to the Government of Canada where there will be time to establish the contact (s) they recommend to be made by the IE to discuss the Project.

8.7 TECHNICAL AND COMMERICAL ISSUES

We have requested of Nalcor an interpretation of what is required to be discussed within this subsection of the report.

8.8 REVIEW ENVIRONMENTAL SITE ASSESSMENT REPORT

We have included in Section 8.2 our review of typical permits prepared for the Muskrat Falls project since there are currently over 300 permits that are current which do not include those being prepared for the LITL Project. We have also reviewed the Environmental Impact Statement, Executive Summary, for the LITL project during this early phase of our studies. The Summary presents a comprehensive review of the topics that were studied and included in Table 16-3, starting on page 85 of this document, the 'Cumulative Environmental Effects Summary: Socio-economic Environment' for the findings to date. Table 16-3 is a simplified version of the EIS Summary and is presented below to be a readily available resource for further assessment by the IE.

Table 16-3

ABBREVIATED SUMMARY OF ENVIRONMENTAL EFFECTS FINDINGS OF EIS

SOCIOECONOMIC ENVIRONMENT

LABRADOR-ISLAND TRANSMISSION LINK

TOPIC	FINDING	FINDING	REMARKS
VALUED ENVIRONMENTAL COMPONENT (VEC)	LIKELY CUMULATIVE ENVIRONMENTAL EFFECTS OF OTHER FUTURE PROJECTS AND ACTIVITIES	CUMULATIVE ENVIRONMENTAL EFECTS SUMMARY	
HISTORIC AND HERITAGE RESURCES	GROUND DISTURBANCE LCH;GENERAL INFRASTRUCTGURE; INCREASED OHV ACCESS WITH FORESTRY ROADS; COULD CONTIRBUTE TO CUMULATIVE EFFECTS NEAR COMMUNTIES	NOT SIGNIFICANT	
COMMUNITIES	MAY BE DEMAND ON HEALT-RELATED INFRASTRUCTURE DURING CONSTRUCTION; HEALTH CONCERNS WITH PROJECT OPERATION;	NOT SIGNIFICANT	

TOPIC	FINDING	FINDING	REMARKS
	UNIQUE TO THIS TYPE OF PROJECT		
ECONOMY, EMPLOYMENT AND BUSINESS	MAY HAVE EFFECTS THAT OVERLAP WITH PROJECT EFFECTS; MAY RESULT IN LABOR SHORTAGES AND HIGH LABOR COSTS; CAPACITY OF PRFOVINCIAL COJPANIES TO SUPPLY MATERIALS AND SERVICES TO THE PROJECT AND OTHER PRJECTGS MAY BE COMPROMISED; PROVINCIAL REVENUE BENEFIT FROM PROJECT AND OTHER PROJECTS	NOT SIGNIFICANT	
LAND AND RESOURCE USE	LIMITED PROPOSED DEVELOPMENT ACTIVITY OR LIKELY CHANGES IN NATURE AND INENSITY OF EXISTING ACTIVITIES	NOT SIGNIFICANT	
MARINE FISHERIES	NO KNOWN OR LIELY CHANGES TO THE NATURE AND INTENSITY OF VESSEL TRAFFIC, OR ANY OTHER PROPOSED DEVELOPMENT PROJECTS IN THE AREA	NOT SIGNIFICANT	
TOURISM	INSUFFICENT SUPPLY OF SHORT-TERM ACCOMMODATIONS AND INCREASED DEMAND FOR RESTAURANTS AND RETAIL SERVICES;	NOT SIGNIFICANT	

TOPIC	FINDING	FINDING	REMARKS
	INCREASED TRAFFIC ON ROUTE 510 AND ROUTE 430; INCREASED NUMBER OF WORKERS AS RESULT OF GENERAL ECONOMIC DEVELOPMENT COULD AFFECT THE ABILITY OF TOURISTS TO FIND AVAILABLE ACCOMODATION DURING THE PEAK TOURISM SEASON		
VISUAL AESTHETICS	ALTERATIONS TO THE EXISTING VIEWSCAPES DUE TO VEGETATION CLEARING TO ACCOMMODATE ACTIVITIES, OR INFRASTRUCTURE CONSTRUCION RELATED TO OHER PROJECTS	NOT SIGNIFICANT	

8.8.1 Aquatic Environmental Effects Monitoring Program

MWH has also reviewed the DRAFT of the Aquatic Environmental Effects Monitoring Program, Muskrat Falls, December 2012, to gain insight into this program, but will not comment on this

program at this time and will wait until the final Program is developed before reviewing this document.

8.9 SALT WATER INTRUSION

In an early study performed by Hatch for Nalcor Energy, a salt water intrusion 3D Model Study was performed to determine the effects of the reservoirs and new schedule of releases that would be necessary for the Muskrat Falls generating complex and the effects in the Churchill River and the Estuary from Goose Bay. Salinity and temperature modeling was conducted using a software program DHI MIKE 3 using data from bathymetric surveys of the Churchill River and the Canadian Hydrographic Service nautical chart data, and temperature and salinity measurements taken during the 1998-1999 oceanography field program.

The salinity program concluded that there is a stable and slightly brackish surface layer of 2-4 practical salinity units in Goose Bay and Lake Melville. There is also a stable saline bottom layer (15-25 PSU) that extends throughout Goose Bay and Lake Melville. The Lower Churchill River salinity was between 2-3 PSU with no variation in depth or location between Muskrat Falls and the river mouth.

With the Muskrat Falls plant in operation and the compensation flow being followed, the salt water penetrations would be pushed back to almost its original location at the river mouth as was modeled when Gull Island was modeled (Muskrat Falls was not solely modeled at this time and we believe that it was not modeled alone). The report concludes that saline intrusion is limited to the 'last few kilometers of the river nearest the mouth' and 'that the progress of the intrusion would be halted at this maximum extend even without the release of any compensation flow.' Based on this early study, there should be no issues with saline penetrations with the LCH in operation, in the IE's opinion.

8.10 RESERVOIR FILLING AND MANAGEMENT STRATEGIES

The Independent Engineer reviewed the Information request, IR#JPR.28 (Information Request-Joint Review Panel) associated with the proposed reservoir filling and management strategies under which both Gull Island and the Muskrat Falls projects were reviewed. The criteria that was adopted for flow release was 30 percent of the Mean Annual Flow (MAF) which equates to about 500 cms for the minimum fixed flow during reservoir impounding. The current normal minimum flow release is 350 cms. The 500 cms has been found to be a flow that 'both the fish populations within the river and the habitat would have experienced previously'. Nalcor has advised the IE that once the spillway is constructed, that the compensation flow (minimum flow of 350 cms) will be modified, if necessary based on monitoring results. This will allow for flexibility based on what the monitoring results reveal to allow proper adjustments in the flow. It is uncertain if the permits provide for this adjustment and must be verified that they do allow for revisions to the prescribed and agreed to value by the regulatory agencies and concerned parties. The report determines the filling time for Muskrat Falls and the environmental effects for the fish and the fish habitat. The report does not lead directly to a recommendation but lists the

findings of the study, both pro and con. Based on the data presented, Alternative 4: Fall appears to be the desirable choice with a filling time of 15-19 days; elsewhere in the documents that MWH reviewed, we found a citing of filling time of 9-11 days which equates to the spring alternative, Alternative 2 which lists the 9-11 days; this was apparently selected. This alternative notes that it has the least amount of adult morality, but the young-of-year would be lost in de-watered habitat perimeters. Table 8, page 11, where this information is found does not mention the adults issues under the fish issues. We would like further clarification on this issue since there was a trade-off made, apparently where more data was presented.

8.11 DOCUMENTATION AND SUPPORT CONCLUSIONS

As noted in Section 8.2, the IE has reviewed a sample of the permits that have been prepared to date and requested additional information as well as providing comments on what has been performed. This information was received from Nalcor and noted in Table 8-2.

Based on the exchange of comments to date, the documentation presented supports the conclusions in the opinion of the Independent Engineer. No information has yet been presented on permits and studies performed for the LITL project to allow the IE to form any opinions.

For other studies for example, the saline study as discussed in Section 8.9, the documentation presented by Nalcor Energy support the conclusion there will be no effect from Project operations.

8.12 UNUSUAL CIRCUMSTANCES

No comments are offered at this time.

8.13 STATUS AND COST OF REMEDIAL ACTIVITIES

MWH has requested additional information from Nalcor to allow us to review the proposed cost of any remediation that is required to be performed.

SECTION 9

NALCOR ENERGY'S PROJECT FINANCIAL PRO FORMA

This page intentionally left blank

SECTION 9

NALCOR ENERGY'S PROJECT FINANCIAL PRO FORMA

9.1 INTRODUCTION

The purpose of this section is to review Nalcor's financial planning as represented in Nalcor financial models/pro forma and other resources, and to review projected results of operations as represented in Nalcor financial models.

Reviews of Nalcor's financial planning and projected results of operations are preliminary, conditioned by several factors including the following:

i. Development of the project is progressing rapidly, but at this juncture the financial information includes a number of unknown features, including the accuracy and degree of precision of estimated costs, schedules and other key variables;

ii. The Nalcor financial models, prepared in Microsoft Excel, are being prepared by Owner's consultants (PwC). The parameters and parametric value assignments, assumptions, cell relationships and computations have not as yet been completed;

iii. The financial model cells in their current forms are password-protected. Cell values are visible, but due to the cell protection the models are difficult to audit and impossible to run juxtaposed scenarios to test the sensitivities of alternative assumptions and planning features. Many cells are composed of values with 16 decimal precision hard data implying that the cell contents have been value-pasted. Thus, their derivations cannot be verified. Audit tests of reasonableness are limited to intuition as the MWH Nalcor Energy Agreement does not contemplate build-up of duplicate models; and

iv. The Power Purchase Agreement ("PPA"), and Operation and Maintenance ("O&M") Agreement and other relevant contracts and agreements that support the assumptions made are not yet available.

The review and comments offered herein are, therefore, conditioned by these circumstances and settings, and limited to a snapshot of the level of development progress achieved as of March 2013. The review of overall project economics has been narrowed by these constraints, and focus is placed on technical content and analysis of the Nalcor financial models.

The scope of the review covers all three components into which the Project being developed by Nalcor, namely the Muskrat Falls Generation ("MF"), Labrador Transmission Assets ("LTA"), and Labrador-Island Transmission Link ("LILT").

9.2 CAPITAL COSTS

A principal feature of the development of the LCP is development of estimates of construction and ancillary costs, collectively known as Capital Costs. Section 5 of this report addresses in detail the LCP construction cost estimate and also the schedule estimate.

9.2.1 Cost Estimating Methodology

Construction costs estimates were prepared by Nalcor and its cost estimator consultants. The Independent Engineer, MWH, provided a cursory review of the cost estimating process and results. The review included communications with Nalcor representatives about the methods used to estimate allowances for contingencies at the various stages of cost estimate development. Industry-standard methods published by AACEI (the Association for Advancement of Cost Engineering, International), the Project Management Institute ("PMI") and proprietary methodologies were referenced.

The estimate basis was previously published in Nalcor's Technical Report dated October 12, 2012, for Rating Agency Review (Rec No. 200-160341-00009).

The methodology adopted to estimate costs is similar to estimates we have seen in other projects of similar nature and size, and, together with cost of major equipment secured through requests for proposals from manufacturers, the all-inclusive list of materials, the adoption of best available technologies and market data, labor costs and productivity factors are factored into the construction cost estimates, as reliably as can be at this development stage.

By taking account multiple aspects influencing the costs, from schedule to labor, from construction plans and equipment, to logistics, Nalcor developed a solid base for its estimates, The estimates are, in our opinion, comprehensive to the extent they include escalation, prior costs, financing fees, allowance for funds used during construction ("AFUDC," also called interest during construction, or "IDC") and debt service reserve accounts. As mentioned elsewhere, certain project finance cost items are not explicitly stated, and confirmation should be obtained on their inclusion under the "indirect costs" category addressed later in this section.

Significant emphasis was placed in securing proposals from manufacturers for major equipment, but considering that at this stage, MWH have not reviewed all of the major Contracts that are required to be reviewed in our Agreement. Thus, we are not in a position to offer an opinion on whether all appropriate costs have been included in the capital cost assumed in the financial models. Further, without the benefit of reviewing all of the Contracts, and confirming certain commercial obligations, *e.g.,* performance guarantees and liquidated damages, an opinion cannot be formed on the reasonableness and magnitudes of increases in the total

capital cost under certain commercial scenarios. For those contracts (and one RFP) we have reviewed, our comments pertaining to warranties, guarantees and liquidated damages are noted in the tables in Section 4 of this report. Another potential impact that cannot be verified without the contract review is how potential change orders will be managed.

9.2.2 Background

The capital cost estimates used as input into the financial models, already in AACEI Class 2 category, differ (see Table 9-1) from those shown in Decision Gate 3 ("Project Sanction" granted, milestone preceding Project Execution and EPC phase) Capital Cost and Schedule Estimate Summary Report. The distinction may be because the Decision Gate 3 estimate was prepared in October 2012, and the cost estimate was prepared in July 2012. The small difference has no material impact on the results and conclusions that can be derived from the financial pro forma model. See Table 9-1.

Table 9-1

TOTAL COST ESTIMATE AND FINANCIAL MODEL DATA

	MUSKRAT FALLS	LTA	LITL	TOTAL
BASE ESTIMATE	$2,511,923,504	$601,311,778	$2,359,610,970	$5,472,846,252
CONTINGENCY + ESCALATION	$389,234,769	$90,270,587	$250,137,947	$729,643,303
TOTAL ESTIMATE	$2,901,158,273	$691,582,365	$2,609,748,917	$6,202,489,555
PRO FORMA DATA*	$3,321,550,000	$810,400,000	$2,646,134,000	
VARIANCE[%]	+14.49%	+17.18%	+1.39%	

* Values reported at cells [B15] of SUMM-PF tab of the Tranched Base model workbooks for MF and LTA.

As of the date of the Report, the LCP Gate 3 Estimate is based on a fixed and firm design and on a level of engineering of over 50%, putting it into a AACEI Class 3 category, with a level of accuracy already within a 20% band.

9.2.3 Indirect Costs

A deterministic approach based both on direct and indirect costs is stated to be the methodology followed to arrive at the cost estimate. On that basis, certain indirect costs are embedded in the estimates prepared, but, the detailed line item breakdown of the estimates are

not explicit enough to allow a conclusion that all items (legal, for example) are included under "indirect" costs category.

In our opinion, the approach and the comprehensiveness of the technical estimates is consistent, and even better than those normally seen in projects of this type. On the other hand, the lack of information or references to other costs associated with project financing, e.g. legal fees, insurance premium, do not allow for a definitive conclusion whether these numbers are incorporated into the embedded indirect costs; confirmation is required, since they do not seem to be listed separately.

Financing fees, namely those for arrangement and commitment, are discriminated, and, at 1.5% (LILT), are of the order of magnitude typically seen in other similar projects. The input to the financial models will be revised as the project moves closer to funding.

9.2.4 Adequacy of Pre-Operating Expenses

We were not able to identify where these costs are located and have requested Nalcor to furnish this information to us.

Historical costs are discussed but are included as large lump sums with no detailed discussion. The values are repeated Table 9-2 immediately below for reference.

Table 9-2

HISTORICAL COSTS

PROJECT	HISTORICAL COST	REMARKS
MUSKRAT FALLS	$97,303,164	
LABRADOR TRANSMISSION ASSETS	$4,196,093	
LABRADOR – ISLAND LINK TRANSMISSION	$85,307,165	
TOTAL	$186,806,422	TO BE INCLUDED IN OTHER ESTIMATES, THE HISTORICAL COST ARE REQUIRED TO BE ESCLATED TO THE SAME COST BASIS THAT THE OTHER ESTIMATES ARE IN. THIS REQUIRES FURTHER CLARIFICATION SINCE Nalcor HAS TAKEN A DIFFERENT APPROACH FROM ONE THAT IS NORMALLY ACCEPTED BY LENDING AGENCIES AND FINANCIAL ADVISORS.

Using the total value of these historical costs (sunk costs) and comparing it to the total cost of the three projects of $5,472,846,252 results in 3.41% of the Total Estimated Construction Cost. This percentage is low when compared to other projects we are aware of. However, there is still

additional exploration work on going to support the preparation of additional contracts and additional engineering services to prepare the necessary construction drawings that would normally be included in the historical (sunk cost) which would increase the computed percentage given herein. Nalcor has also advised MWH of the services that were provided in the investigations of Gull Island that overlap Muskrat Falls since many of the studies required to each project are the same. Currently these studies have not been included in the historical cost total. When this additional amount of $_____(Nalcor to fill in) is included in the total, the percentage for historical cost then increases to about ____percent, which is more in line with the percentages that are normally reviewed by the Independent Engineer.

9.2.5 Cost Escalation

The long duration of the development, construction and operation phases of the Project subject project costs to changes either caused by inflation and various other factors, including changes in market conditions, labor rates, productivity, etc.

The costs projected and input into the financial models have taken into account escalation, in addition to contingency, which addresses separately risks of a different nature. With the assistance of external experts, Nalcor has projected cost escalation that takes into account how each sector of the economy, *e.g.* commodity, labor market or global economic factors, is impacted differently. In our opinion, the strategy adopted by Nalcor permitted a more realistic estimate of escalation.

The input escalation assumptions into the MF, LTA and LITL spreadsheets in the financial models reflect the detailed estimates prepared, and appear consistent with the trends projected for the region.

Table 9-3

COST ESCALATION

ESCALATION	2012	2013	2014	2015	2016	2017	2018
MUSKRAT FALLS							
CUMMULATIVE	1.1%	2.8%	5.8%	8.3%	10.1%	10.6%	10.2%
ANNUAL	1.1%	1.7%	2.9%	2.3%	1.7%	0.5%	-0.3%
LABRADOR ISLAND T LINK							
CUMMULATIVE	0.2%	2.5%	5.0%	7.8%	9.5%	14.2%	21%
ANNUAL	0.2%	2.3%	2.4%	2.7%	1.6%	4.4%	5.9%
LABRADOR TRANSMISSION ASSETS							

CUMMULATIVE	0.6%	2.5%	5.4%	10.3%	13.0%	14.8%	
ANNUAL	0.6%	1.9%	2.8%	4.7%	2.5%	1.5%	
TOTAL PROJECT ESCALATION							
CUMMULATIVE	0.9%	2.7%	5.3%	8.2%	9.8%	12.0%	11.9%
ANNUAL	0.9%	1.8%	2.6%	2.7%	1.5%	1.9%	

9.2.6 Tactile or Scope Contingency

The level of project definition as evidenced by the amount of detailed engineering performed at this project life-cycle stage provides an essential margin to mitigate uncertainties still present in the absence of the larger contracts being awarded and executed. However, , the Independent Engineer is of the opinion that contingency allowance for known or tactile risks should be greater than the figures provided by Nalcor's cost estimating consultants. We maintain the opinion that the underfunded tactile or scope contingency will place increasing pressure on the utilization of the management reserve to mitigate project risks and other execution challenges. This perception works against the common notion that the management reserve will not be spent and will be front and center to deal with both known and unknown risks. The contingency issues at odds will be reviewed with the objective of finding consensus among the professional estimators. By arriving at the contingency level used as input to the pro forma following a multi-faceted Project Risk Management Plan, and using AACEI's recommended practice, NALCOR has, adopted, in our opinion, an aggressive approach relative to risk management in the interim period if the management reserve is not readily assessable. . We find that typically the scope contingency for a Decision Gate 3 status would range between 10 percent to 15 percent of this state of project development. A separate management reserve allowance at 10% is also recommended for strategic or unknown unknown risk issues. Table 9-4 lists the current level of contingency provided by Nalcor in the financial model/pro forma.

Table 9-4

CONTINGENCY LEVELS PRO FORMA INPUT

	MUSKRAT FALLS	LTA	LITL	TOTAL
BASE ESTIMATE	$2,511.9	$601.3	$2,359.6	$5,472.8
HISTORICAL COST ADJUSTMENT	$97.3	$4.2	$85.3	$186.8
FUTURE	$2,414.6	$597.1	$2,274.3	$5,286.0

EXPENDITURE				
RECOMMENDED P50 C0NTINGENCY	$226.7	$54.8	$86.5	$368.0
[%] OF BASE ESTIMATE	9.03%(1)	9.11%	3.67%	6.72%

[IN MILLIONS OF DOLLARS]
(1)Note: MWH's experience for contingency level for MF would 10%-15%.

It is important to note the context for this estimate, which was prepared to verify Decision Gate 2, but, also, to support the Project Budget determination and provide the input to the financial pro forma model. In our opinion, the estimates for MF, LTA and LITL are generally comprehensive, to the extent that they include contractors' indirect costs, particularly important in the MF case, where the value of accommodations and site support services represent a measurable percentage of the total estimate.

9.2.7 Working Capital Requirements

We have not reviewed a plan for each of the separate projects wherein capital expenses have been forecasts and budgeted for major equipment and systems overhauls and replacement. We have asked Nalcor to supply support data to allow us to review it to address this requirement.

9.2.8 Interest During Construction

The construction cost estimate does not include any costs with respect to those costs associated with interest during construction (IDC). These were accounted for as a separate input stream to the CPW analysis [Where are these found?]

Additionally, the Historical Costs contained within the CCE exclude an- IDC charges. The following Table 9-5 duplicates the information given in Doc. #LCP-PT-ED-0000-EP-ES-0001-01, Rev.B1. The reader is referred to Table 9-2 pertaining to the 'Remarks' note that the cost basis of the Historical Cost estimate is required to be in the same time frame as the other items in the table. This also applies to Table 9-5.

Table 9-5

FINANCING COST AND INTEREST DURING CONSTRUCTION COST

FOR HISTORICAL COSTS

PROJECT	FINANCING	INTEREST	TOTAL
MF	$7,036,237.84	$5,373,948.72	$12,410,186.56
LITL	$3,069,830,.82	$7,404,278.61	$10,474,109.43
LTA	$1,041,445.81	$0.00	$1,041,445.81
TOTALS	$11,147,514.48	$12,778,227.32	$23,925,741.80

9.2.9 Cost for Establishing Inventories (Renewals and Replacements)

We were not able to identify where these costs are located and have requested Nalcor to furnish this information.

Table 9-6

RENEWALS AND REPLACEMENT COSTS

PROJECT	Nalcor R&R	MWH R&R		REMARKS	Information is required for this table; to be supplied by Nalcor	
		First Year	Tenth Year			
MUSKRAT FALLS						
LABRADOR TRANSMISSION ASSETS						
LABRADOR-ISLAND TRANSMISSION LINK						
TOTAL						

NOTE: R&R given for first year and tenth year of operation

9.2.10 Labrador-Island Transmission Link

For the Labrador-Island Transmission Link, the Revenue Required ($2,142,880,00) has been projected for the 50 years of the Service Life, and sourced exclusively from the Labrador-Island

Link LP, with no contribution from EMERA. No confirmation of the terms and conditions of this cash flow could be verified in the absence of a PPA.

9.2.11 Summary of Capital Costs

While the Capital Cost estimate is reviewed in Section 5 of this report, it is relevant to note here that the figures used as input to the pro forma appear to be a reasonable representation of the Total Cost, as can best be assumed and projected based on the information available at this time.

Refinement will be required, and will take place, as the level of engineering progresses, design drawings reach a higher level of completion and the construction packages become better defined, and contracts are awarded. Such refinement must take place prior to financial closing.

Table 9-7

CAPITAL COST ESTIMATE SUMMARY

DECISION GATE 3

MUSKRAT FALLS (MF)	
Accommodation Complex / Admin / Utilities / Access Roads/ Construction Power	$166,608,338
Bulk Excavation & Main Civil Works for Intake & Powerhouse, Spillway & Transition dams	$823,064,224
North Spur/North and South Dams/Reservoir Clearing/Habitat Compensation works	$336,605,489
T&G's/Powerhouse Mechanical and Electrical Auxiliaries/Hydro Mechanical Equipment/GSU's/Collector Lines	$484,012,733
Telecommunications	$17,298,550
Site Services	$248,312,374
Spares	$1,500,000
Sub-Total	**$2,077,401,708**
Project Management	$292,987,287
Integrated Commissioning Services	$1,950,000
Project Vehicles / Helicopter Support	$5,691,750
Insurance / Commercial	$14,531,242
Land Acquisition and Permits	$1,115,004
Quality Surveillance & Inspection / Freight Forwarding Services	$4,700,000
Environmental & Aboriginal Affairs	$16,243,349
Sub-Total	**$337,218,632**

Historical Cost	**$97,303,164**
TOTAL	**$2,511,923,504**
LABRADOR TRANSMISSION ASSETS (LTA)	
Oil Transmission CF-MF	$288,254,205
Switchyards	$192,087,214
Telecommunications	$15,467,507
Spares	$2,960,613
Sub-Total	**$498,769,539**
Project Management	$82,891,340
Integrated Commissioning Services	$9,372,938
Project Vehicles / Helicopter Support	$842,250
Insurance / Commercial	$2,519,988
Land Acquisition and Permits	$1,119,630
Quality Surveillance & Inspection / Freight Forwarding Services	$1,600,000
Environmental & Aboriginal Affairs	$16,243,349
Sub-Total	**$98,346,146**
Historical Cost	**$4,196,093**
TOTAL	**$601,311,778**
LABRADOR-ISLAND TRANSMISSION LINK (LILT)	
Converters / Transition Compounds/Synch Condensers/SP Switchyard	$639,805,781
Electrode Sites / Island Upgrades	$77,613,063
OL Transmission MF-SP	$929,045,619
SOBI Marine Crossing	$337,440,262
Telecommunications	$21,433,995
Spares	$6,724,135
Sub-Total	**$2,012,062,855**
Project Management	$194,893,751
Integrated Commissioning Services	$3,053,762
Project Vehicles / Helicopter Support	$10,311,000
Insurance / Commercial	$15,674,421
Land Acquisition and Permits	$18,472,787
Quality Surveillance & Inspection / Freight Forwarding Services	$8,100,000
Environmental & Aboriginal Affairs	$11,735,229
Sub-Total	**$262,240,951**
Historical Cost	**$85,307,165**

TOTAL	$2,359,610,970

Notes: 1. The Historical Costs for each of the projects are not to the same basis as the other costs in the table; therefore, in the opinion of the IE, they should not be added into the total without applying an escalation factor that Nalcor did not provide to these values. 2. MWH has also requested confirmation from Nalcor that Historical Costs are recoverable and can by law be included in the estimate. 3. Historical Costs as a percentage of Total Cost for LTA appear to be low, and in general are low (3.41%) for the Grand Total Cost of $5,472,846,272.

9.3 FINANCIAL PLANNING

The Nalcor financial planning models/pro forma include information that is useful for optimizing the utilization of financial institutions and instruments, well beyond the typical requirements for pro forma projections of results of financial operations. The models include, for example, "gearing" to optimize debt service coverage funds, and hedging/swaps to balance interest rate risks.

9.3.1 Credit Enhancement and Revenue Production Factors

Two paramount issues for Nalcor financial planning have to do with bond sale security: credit enhancement and net revenue production. It is perceived that long-term revenue secured bonds will be sold to produce the necessary capital proceeds to pay for construction and ancillary project costs. If bonds are to be sold, the credit worthiness of the issuer is a basic determinate of the level of interest expense that Nalcor will have to pay investors as debt service. More credit worthiness means lower credit risk which translates to lower annual cost of debt service. In December 2012 the Canada federal government, the province of Newfoundland and Labrador and the province of Nova Scotia signed an agreement which basically provides that the federal government will provide the credit enhancement of use of its best in the world AAA credit rating to secure the bonds to be sold, up to a cap of $6.3 billion. The loan guarantee is also limited to include project estimated costs, *i.e.*, any cost overruns will not be protected by the federal credit rating. The effect of this credit enhancement has been reported to benefit the provincial rate payers by upwards of $1 billion in interest savings over the maturity period of the bonds.

9.3.2 Issuing Entity

In March 2013 it was revealed to the Independent Engineer that the proposed bonds will actually be sold by the government of Canada rather than the provinces, perhaps with beneficial effect of lower transactions costs and lower administrative costs of bond service.

The assets to be constructed may be partially mortgaged. But even so, a principal feature of bond security from the perspective of bond buyers will be a pledge of net revenues of the enterprise to pay annual bond principal and interest plus a coverage factor. Net revenues are basically the sum of enterprise revenues less O&M expenses. The net revenue after O&M expense is available for servicing the bonds. If the coverage factor is 25 percent, the net

revenues must be greater than 1.25 times debt service each year. The coverage margin provides investors security that the bond payments will be made even if revenues are lighter than budget or expenses exceed budget, or both. An additional feature of bond security is a debt service reserve account. The DSRA will typically include sequestered funds equaling one year of annual principal and interest payments, usually the maximum annual debt service ("MADS"). Even if the MADS is not scheduled to occur for say fifteen years, that amount is required to be maintained in the DSRA trust account. The DSRA is typically funded by (capitalized by) the proceeds of the bonds.

It is possible that the government bonds will not require debt service coverage or DSRA. In that case the bond sale amounts would be less (without funding the DSRA) and annual debt service would be less (lower proceeds required since no DSRA and no debt service coverage required).

Financial planning must be revisited once the capital cost estimates, O&M cost estimates, and forms of long-term financings are better defined.

9.3.3 Debt Service Coverage Ratio

When the project development moves closer to issuing bonds to finance construction, the DSCR will be set by Nalcor's credit market advisors. The DSCR figures arrived at in the pro forma compared to those seen in other recent similar projects appear to be on the low side, but can be deemed reasonable when seen in the context of a take or pay PPA, and the Government of Canada guarantee on the loans and the Provincial Governments' guarantees on the equity. Again, it is not at this point known if there will be a DSCR associated with federal financing, if that is the financing method that is pursued. Table 9-8 lists the DSCR for the projects.

Table 9-8

DEBT SERVICE COVERAGE RATIO

	AVERAGE DSCR	MINIMUM DSCR	REMARKS
MF	?	?	?
LTA	1.807	2.034	Ave. Rolling; Min Monthly, 2029
LITL	1.57	1.4	For a 50-yr term

9.4 ANNUAL COSTS

Annual costs may seem immaterially small in comparison with the capital costs of the project, but it will be important to forecast annual costs for the purposes of bond documents. Operations and maintenance, debt service, depreciation expense and pay-as-you-go annual capital requirements will be the largest annual costs.

9.4.1 Annual Operations & Maintenance Expenses

Nalcor has provided annual O&M expenses from the time of commissioning Year-2018, to Year-2038. A formula was used to increase the costs each year but cannot be observed because the file is locked. We were unable to find the support documentation to observe the assumptions used in determining these costs. The percentage increase varies from 2.4% to 2.6%. For the first year of operation, Nalcor estimates that the Operation expenses for Muskrat Falls, which are primarily based on the personnel required for the project, at $2,490,000 and the Maintenance Expenses to be $7,360,000. Other predictive models that are based on actual hydroelectric plant experience (principally in Canada) provide for the aging consideration of the project that would show a different set of O&M expenses for the project. We have asked Nalcor to supply more support data for their model.

Table 9-9

ANNUAL OPERATIONS AND MAINTENANCE EXPENSES

PROJECT	FIRST YEAR ANNUAL COST	REMARKS	IE --FIRST YEAR ANNUAL COST	IE OPINION
MUSKRAT FALLS	$6,345,025		LATER	LATER
LABRADOR TRANSMISSION ASSETS	$2,148,360			
LABRADOR-ISLAND TRANSMISSION LINK	$15,970,624 VALUE SHOWN ON SUMMARY SHEET	$14,423,124 IS SHOWN ON TABLE OF DETAILED ESTIMATE; WHY IS THERE A DIFFERENCE?		
CORPORATE SUPPORT ANNUAL OVERHEAD	$2,127,155			
ENERGY CONTROL CENTER ANNUAL OPEX	$4452,238			
SUB-TOTAL MF, LTA, LITL	$24,464,009	THE CORPORATE SUPPORT AND ENERGY CONTROL		

		ARE NOT INCLUDED. WHY NOT?		

9.4.2 Debt service

The financial models compute annual debt service, debt service coverage requirements, and debt service reserve account, as discussed above under financial planning. Annual debt service becomes an expense that must be paid by Nalcor using revenues generated by the sale of electricity. If Nalcor uses the "Cash Needs" approach to revenue requirements determination, then it will plan that rate revenue will be sufficient to pay annual debt service. If Nalcor uses the "Utility" approach to revenue requirements determination, then the interest component of debt service will be paid from rate revenues (as an operating expense), but the principal component of debt service would be paid from equity (reserves or sale of stock) or, more probably, by including both depreciation expense and a return on rate base (depreciated original cost/value of used and useful facility assets). The return is computed using the utility's weighted average cost of capital, also known as Discount Rate.

9.4.3 Discount Rate

Consistent with DG2, NL Hydro's discount rate is established annually at its weighted average cost of capital. In the intervening two years since the DG2 forecasts were prepared, the downward revision from 8% to 7% reflects the lower long-term interest rate outlook obtained from the Conference Board of Canada's long-term forecast, a lower debt guarantee fee paid to the provincial government, and a corresponding lower cost of equity. A comparison between DG2 and DG3 forecasts is provided in the following Table 9-10:

Table 9-10

NL HYDRO REGULATED WEIGHTED AVERAGE COST OF CAPITAL (WACC)

For Use in Long Term Corporate Planning Studies and Analysis

CONFERENCE BOARD OF CANADA FORECAST	DG3	DG2
	JAN 2012	JAN 2013
Long Term Debt Cost		
• Conference Board Long Term Government of Canada (GOC) Rate	4.83%	5.68%
• Spread for NLH Credit Over GOC	0.90%	0.67%
• Forecast of NLH Long Term Cost of Debt	5.73%	6.35%

Debt Guarantee Fee Paid by NLH to Government	0.5%	1.0%
Average NLH Long Term Marginal Cost of Debt (Rounded)	6.25%	7.35%
Long Term Equity Cost Investor Owned Utility Long Term Opportunity Cost of Equity (Rounded)	9.25%	10.0%
Weighted Average Cost of Capital (WACC) [Average of 75:25 Debt:Equity ratio]	7%	8%

The weighted average cost of capital (WACC) used in the pro forma is 7% which is the Conference Board of Canada's recommendation for Long Term Corporate Planning Studies and Analysis.

We are of the opinion that 7% is a reasonable WACC to be used at this date and phase of the Project. It is based on a 75%:25% debt/equity ratio, a split that can be changed by the Lenders, which would result in a slightly different cost of capital. A sensitivity analysis is therefore recommended to be performed once the requirements of the Government of Canada are known.

Presently, the WACC input into the pro forma are given in Table 9-11:

Table 9-11

COST OF DEBT AND EQUITY

	MF	LTA	LITL
Cost of debt	?	?	3.830%
Cost of equity	?	?	
WACC			5.185%

Based on a 75%/ 25% Debt / Equity Ratio for LITL; 65% / 35% for LTA

9.4.4 Depreciation Expense

The other component of capital revenue for a utility is the funding of annual depreciation expense. Long-range annual depreciation expense may be estimated for planning purposes by dividing total capital costs by a reasonable useful life assignment. If, for example the weighted average depreciable asset has a useful life of, say, 75 years and a capital cost of, say, $6B, then the annual depreciation of these assets would be $80M.

9.5 REVENUE PROJECTIONS

The PPA has not been reviewed because it has not been received, as yet. Without access to this document, and its terms and conditions, and in particular, its capacity and energy payment structure, the scope of the review in this area is very limited and the opinion offered herein must be qualified accordingly.

Without the PPA, one of the aspects that could not be verified is the reported full cost recovery via a "take or pay" obligation on the part of the off-takers. If confirmed, the hydrologic risk becomes non-relevant to the Lenders. This is because the purchases must either buy a minimum agreed to amount of power or not to buy it, but then must pay for the power anyway at an agreed-to price (usually reduced price). If there is a shortage of power in a year because of dry hydrological conditions, the seller will have already taken this into consideration when it established the price of the power in the take or pay agreement, and thus its cost of capital will be secure since they will be paid regardless of what power is available that year.

Nalcor provides projections of revenue based on the assumed terms of the PPS and the average annual power forecast of 4.93 TWH in their model. Plant usage and internal usage of the other project facilities may or may not be included in the computations—confirmation of these power deductions has not been independent verified by the IE.

9.6 IMPLEMENTATION ISSUES

9.6.1 Dispatch Constraints

The dispatch of the Projects power is controlled by the Water Management Agreement under which the Water Management Committee selects the Independent Coordinator whose responsibility is to "…determine the total Power to be produced and is required to determine and prepare the production Schedules which shall specify the amount of Power to be produced by each Supplier's Production Facilities in accordance with the provisions of the Agreement. Nalcor Energy and Churchill Falls (Labrador) Corporation Limited are the 'Suppliers' of power.

MWH currently does not see where a dispatch constraint could occur, in our opinion, with the Water Management Agreement in place and dutifully promulgated and with the information the Independent Engineer is currently provided with.

We have requested of Nalcor further information pertaining to any dispatch constraints and where and why they may occur, since this issue apparently was studied and risk assessments conducted.

9.6.2 Project Performance and Reliability

Based on the number of contracts and the RFP for CH0007 that we have been able to review to date, it is still too early to forecast directly from actual results of Project testing and commissioning of systems, and how each of the turbine-generating units and the systems

actually will perform over time. However, based on other projects of similar complexity and size and their performance and reliability history which we are aware of, we have no reason to question at this time that the Lower Churchill Project, as presently configured and provided with the proposed adequate Operations and Maintenance and renewals and replacement budgets, will not produce satisfactory performance and will be a reliable and dependable resource.

9.6.3 Bonus/Penalty Arrangements

The Independent Engineer has reviewed only one contract (the RFP for Contract CH0007) that considers bonus provisions. Table 4-2, Item No. 13, summarizes the provisions for receiving a bonus for this RFP (Contract CH0007). Since the contract has not been awarded, there is no way to determine if the bonus provisions will still be intact as given in the RFP. We have been advised by Nalcor that the Courts in Canada do not prejudice a contract that does not have both penalties and bonus provisions as is the case for the USA and in some other countries. Nalcor advised that they have discussed bonus provisions for each of the contracts and determine that only the contracts where there is an advantage to have this provision, have they chosen to provide a bonus provision in the contract.

For contract CH0030 involving the turbines and generators, we have commented in Table 4-3, Item No. 13, herein that it is normal to provide a bonus if the units achieve efficiencies that surpass the guaranteed efficiency, but this has not been provided in this contract.

9.6.4 Project Operating Structure and Payment Structure

Included in Appendix R is a chart, prepared by Nalcor Energy, which depicts how the principal operating payment system has been structured to allow the payment of tariffs from the provinces' rate payers to be equitable distributed, based on contractual agreements among the operating companies who will own, operate and manage the Project components. The chart envisions that if any export revenues accrue to the project (a future possibly consideration), that they will flow from Newfoundland Labrador Hydro only to the Muskrat Falls operating company. The structure was devised by Nalcor Energy as a means to allow collateral Trustees for the Muskrat Falls Assets and Labrador Transmission Assets to disburse the payments in accordance with the priority order, established in the Agreements with the parties, not only to the owners and operators of the project, but with direct payments to the Lenders. Emera NL will be receiving payments as the chart structure depicts, and discussions concerning their participation in the project are covered under a separate Independent Engineer's Report associated with the Government of Canada and their advisors.

At the present time, MWH has not received copies of any drafts or the Agreements from Nalcor Energy that would allow it to review and opine on the technical appropriateness of these documents other than the Water Management Agreement and the Water Lease Agreement. We have only been requested to opine on the Power Purchase Agreement (PPA), the Interconnection Facilities Agreement (IFA), the Water Management Agreement, and the O&M Agreements (See Section 7). The Fuel Supply and Transportation Agreement listed in the

MWH Agreement with Nalcor Energy, but it applicable to a thermal power project and have been eliminated from our purview of Agreements.

MWH was not requested to opine on the structure presented in the Appendix R chart, but includes it with the IE Report to allow the reader to have a ready reference for this important consideration that the Government of Canada and their advisors can use in conjunction with the special consultants that will be opining on the structures' appropriateness in repaying the debt.

APPENDIX C

TECHNICAL CHARACTERISTICS OF THE PROJECT

MUSKRAT FALLS

Location: Labrador on the Churchill River

Latitude: Longitude:

River Km:

Reservoir Volume at Full Supply Level, EL. 39.0m: _____ Length of reservoir: 58 km

Drawdown allowed by Water License: _____m; Allowable variation in water level:_____cm

Operating level: Winter: Summer:

Environmental Flow: 350 cms; Release: At the Gated Spillway

Power Station:

Length: 181.2 m; Width: 73.4m; Height: 79.6m Powerhouse upstream deck Elevation: 45.5; Downstream deck Elevation: 15.0

Substructure: Reinforced Concrete; Superstructure: Steel Frame and Steel Clad Building; two erection bays and 4 unit bays

No. Of Units: 4—

Number and type of turbine: 5-blade Kaplan turbines; Dia: 9.2m; Maximum hydraulic capacity: 2660 cms Design flow: ____cms Minimum flow:_____ cms Design head: 39 m Size: 206 MW

Vertical Axis Synchronous Generators: 4 rated at 229 MVA; PF=0.9; Voltage_____V

Minimum tailwater: _____; Normal tailwater at station rated head and flow:_____; Tailwater at PMF_____; 1:100 years_____m (6,940 cms); 1:1,000 years_____m (8120 cms)

Gated Spillway

Length: 74.5 m; Width:72.5 m; Height: 43m from base to deck; 27.5m to Gate House roof

Operating deck Elevation: 45.5m

PMF El. 45.1m PMF: 25,060 cms Capacity of Gated Spillway at 45.1m: 15,770 cms

Reinforced concrete structure with fully enclosed superstructure

No. of openings: 5; Ogee Sill: EL18.0; Hydraulic Capacity at Full Pool:_____cms; Hydraulic Capacity of one Gate at Full Pool:_____cms

Gate Dimensions: Width:_10.5m; Height:_22?____m; Gate weight:_____Kg

Hoist type and capacity: wire rope and drum

Power supply and Operation:_____

Energy Dissipation: _____

Fixed Crest Spillway (North RCC Dam)

Length: 425 m; Width:_____; Height:__m; Crest El. 39.3 m; Crest type: ogee shape

RCC with conventional reinforced concrete overlay with drainage gallery

Hydraulic capacity: 13,300 CMS to pass the PMF with the Gated Spillway working in combination at Elevation: 45.1m

Energy dissipation: roller bucket and unpaved rock channel

South RCC Non- Overflow Dam

Length: 325 ?m; Width:_____m; Height:_____m

North Spur Dike

Length: 220 m; Crest Elevation: 46.0m ; Height: 26m

APPENDIX E

List of Information Needed to Perform the IE Technical Evaluation Contract

This page intentionally left blank

LOWER CHURCHILL PROJECT

LIST OF DOCUMENTS TO BE FURNISHED TO THE INDEPENDENT ENGINEER

1.1 Project Feasibility Report

1.2 Summary of Geotechnical investigations and the Geotechnical Reports for the following: Muskrat Falls Generating Project including the site and the switchyards; Labrador-Island Link Project including the converter stations, the transition compounds, the crossing of the Strait of Belle Isle, and the transmission lines. Of particular interest to our civil/structural engineers and our geologists is the study associated with the treatment of the left abutment (knoll) and its geology at Muskrat Falls dam. We would also like to review the borrow area reports for sources of riprap and aggregate for concrete as well as materials for roads.

1.3 Hydrologic Reports and Studies of selected Muskrat Falls site and the Basin

- 1.3.1 Basis for Power Production Estimates---Hydrology and Power Model
- 1.3.2 Hydrology and Power Estimates for the Planned Gulf Island upstream project
- 1.3.3 Precipitation and Climatological Data for Site
- 1.3.4 Diversion and Spillway Flood Studies
- 1.3.5 Sedimentation Data and Reservoir Useful Life Determination for Sustainability
- 1.3.6 Ice Berg studies and associated design criteria

1.4 Basis of Design Report

1.5 Drawings and Specifications

- 1.5.1 General Civil Works
- 1.5.2 Major Project Features of Muskrat Falls--Dams, Power Plant, Spillway, Switchyard
- 1.5.3 AC/DC Converter Stations
- 1.5.4 Submarine Cable Crossings: Strait of Belle Isle; Bathymetry along selected route
- 1.5.5 Switchyards
- 1.5.6 Transmission Lines
- 1.5.7 Transition Compounds

1.6 Contract with Design Engineer (EPCM) and Contact Names/Telephone/email/FAX

- 1.6.1 Design Engineer's Organization Chart
- 1.6.2 Resumes of the Lead Design Engineers/Specialists: Civil; Geology/Geotechnical; Hydrology and Hydraulic; Mechanical; Powerhouse Mechanical; Powerhouse Electrical; Environmental; Structural; Project Manager and Deputy Project Manager; Health and Safety Specialist; Project(s) CPM scheduler; Project (s) Cost Estimator
- 1.6.3 Resumes of the Lead Site Engineers: Project Manager; Geologist/Geotechnical; Civil; Structural; Mechanical; Electrical; Environmental; Health and Safety Specialist; Submarine Cable Lead Engineer; and Transmission Lines

1.7 Construction Contract (EPCM)—General Provisions and Contact Names/Telephone and Fax numbers; email

LOWER CHURCHILL PROJECT

1.8 Contract for Electrical and Mechanical Equipment and Contact Names/email/Telephone and Fax numbers
- 1.8.1 List of Equipment and Suppliers
- 1.8.2 Performance Criteria
- 1.8.3 Performance Testing Protocol

1.9 Proposed CPM Construction Schedule for the Project
- 1.9.1 Description of Construction Methodology
- 1.9.2 River Diversion and Care of Water
- 1.9.3 Source of Construction Materials
- 1.9.4 List of Critical Events and Dates
- 1.9.5 List of Float time for procured items and for principal construction activities

1.10 Current Construction Cost Estimate
- 1.10.1 Schedule of Payments to Contractor/Vendors
- 1.10.2 Estimate of Cost of Work Left to Complete

1.11 List of Construction Contractors and Subcontractors

1.12 Qualifications of Contractors and Principal Subcontractors and Equipment Suppliers

1.13 Permits and Licenses to Construct and Operate Project and Current Status

1.14 Power Sales Contract

1.15 Transmission and Interconnection Agreement (s)

1.16 Operation and Maintenance Agreement with EPCM Firm (SNC-Lavalin)

1.17 Projected Operation Results---Financial Pro Forma (Projection Model) with List of Assumptions and Description of Cases

1.18 Insurance Program

1.19 Safety Program

1.20 Environmental Checklist (World Bank Standards/Equator Principals)

1.21 Environmental Impact Statement and Project Handbook of Environmental Protection Measures

1.22 Emergency Action Plan for Construction, and Emergency Action Plan for Operation

1.23 Load Flow Studies Associated with the Transmission System

1.24 Health and Safety Plan
- 1.24.1 EPCM Firm Health and Safety Plan
- 1.24.2 Contractor's Health and Safety Plan
- 1.24.3 Major Equipment Suppliers/Vendors Health and Safety Plan

1.25 Sustainability Plan for the Project

1.26 Warehousing Plan and Tracking System

1.27 Operations and Maintenance Plans

1.28 Operations and maintenance Budgets

1.29 Inter-connection Facilities Agreement

LOWER CHURCHILL PROJECT

1.30 Water management Agreement
1.31 Water Supply and Wastewater Disposal Agreements
1.32 Fuel and Transportation Agreements
1.33 Copies of the following contracts and other contracts that are planned to be issued.

1.33.1 Procurement Contracts for Transmission Line
- 1.33.1.1 Insulators for AC Lines-PT030
- 1.33.1.2 Conductor for AC Lines-PT0300
- 1.33.1.3 Tower Steel for AC Lines-PT0302
- 1.33.1.4 1.33.1.4 Hardware Accessories and Fittings for AC lines-PT0303
- 1.33.1.5 1.33.1.5 Optical Ground Wire Conductors for AC Lines-PT0304
- 1.33.1.6 Earthing Material for AC Lines-PT0305
- 1.33.1.7 Guy Wires for AC Towers-PT0306
- 1.33.1.8 Steel Grillage for AC Lines-PT0307
- 1.33.1.9 Overhead Shieldwire for AC Lines-PT0326
- 1.33.1.10 Rock Anchors and Anchor Bolts for AC Towers-PT0335

1.33.2 Procurement Contracts for Powerhouse
- 1.33.2.1 Supply of Generator Step-Up Transformer-PH0014
- 1.33.2.2 Supply of Isolated Phase Bus-PH0015
- 1.33.2.4 Supply of Generator Circuit Breakers-PH0016
- 1.33.2.5 Supply of Station Service Transformers-PH0035
- 1.33.2.6 Supply of Auxiliary Transformers-PH0036
- 1.33.2.7 Supply of 25kV Switchgear-PH0037
- 1.33.2.8 Supply of Emergency Diesel Generator-PH0038

1.33.3 Procurement Contracts for Substations
- 1.33.3.1 138 kV & 25 kV Circuit Breakers (Dead tank type)-PD0514
- 1.33.3.2 138 kV & 25kV Disconnect Switches (with & without ground switches)-PD0515
- 1.33.3.3 138 kV Capacitor Voltage Transformers (CVTs)-PD0518
- 1.33.3.4 25 kV Vacuum Interupters-PD0519
- 1.33.3.5 25 kV 6x4 MVAR Capacitor Banks-PD0520
- 1.33.3.6 Pre-fabricated Control Room Bldg.-PD0522
- 1.33.3.7 Substation Service Transformers-PD0523
- 1.33.3.8 25 kV Reclosers-PD0529
- 1.33.3.9 138 kV & 25 kV Surge Arresters-PD0530
- 1.33.3.10 MV Instrument Transformer (Combined CT & PT Unit)-PD0531

1.33.4 Construction Contracts for Intake, Dam, Powerhouse, Site Accommodations, T&G
- 1.33.4.1 Intake, Powerhouse, Spillway and Transitions Dams-CH0007
- 1.33.4.2 Accommodations Complex, Site Utilities-CH0005
- 1.33.4.3 Reservoir Clearing South Side-CH0023

LOWER CHURCHILL PROJECT

1.33.4.5 Reservoir Clearing North Side-CH0024
1.33.4.6 Administrative Buildings-CH0003
1.33.4.7 Southside Access Road-CH0004
1.33.4.8 Bulk Excavation Works-CH0006
1.33.4.9 Accommodations Complex Buildings-CH0002
1.33.4.10 Turbines and Generators-CH0030

1.33.5 Service Contracts
1.33.5.1 Provisions of Security Services-SH0019
1.33.5.2 Provision of Medical Services-SH0020

1.33.6 Construction Contracts for Transmission
1.33.6.1 Right of Way Clearing-Sec. 1 & 2-CT0341
1.33.6.2 AC Transmission Line-CT0319

1.33.7 Construction Contract for Construction Power
1.33.7.1 Construction Contract for Construction Power-CD0512

Muskrat Falls Generation Base Estimate by Physical Component

A - Muskrat Falls Generation	
A.4 - T&G's/Powerhouse Mechanical and Electrical Auxilaries/Hydro Mechanical Equipment/GSU's/ Collector Lines	$484,012,733
2400 - Spillway - General	$3,163,861
2420 - Gates, Guides Stoplogs and Hoist	$50,794,781
3240 - Intake Gates Trash racks Stoplogs & Hoists	$7,656,779
3320 - Superstructure	$7,819,466
3330 - Draft Tube Gates and Hoists	$93,868,389
3340 - Building Electrical Services	$15,782,541
3350 - Building Mechanical Services	$13,335,025
3360 - Powerhouse Crane	$8,872,175
3400 - Power Generation	$8,995,349
3410 - Turbine	$200,000,000
3420 - Generator	$7,394,645
3430 - Electrical Ancillary / Auxiliary Systems	$2,999,701
3431 - DC Power / UPS System	$1,517,500
3435 - Station Service Transformers	$1,914,704
3436 - Bus Duct	$1,860,952
3440 - Mechanical Ancillary / Auxiliary Systems	$17,554,583
3441 - Service Air System	$1,162,641
3442 - Governor Air System	$1,172,654
3443 - Fire Protection System	$3,732,122
3444 - Pump Drainage System	$2,695,481
3445 - Pump Dewatering System	$2,448,322
3446 - Hydraulic Oil Handling and Filtration System	$862,322
3447 - Oily Water interception System	$591,758
3448 - Cooling Water System	$2,438,534
3449 - Service Water System	$1,599,297
3460 - Generator Transformers	$19,731,483
3470 - Spare Parts and Special Tools	$277,079
6160 - Collector Lines Powerhouse to Switchyard	$3,770,591
A.5 - Telecomunications	$17,298,550
1420 - Construction Telecommunications - Muskrat Falls	$15,389,554
9200 - Operations Telecommunications Systems	$250,000
9220 - Operations Telecommunication System - Muskrat Falls	$1,658,996
A.6 - Site Services	$248,312,374
0000 - No Physical Component	$213,662,374
1570 - Site Services	$34,650,000
A.7 - Spares	$1,500,000
0000 - No Physical Component	$1,500,000
Grand Total	**$2,077,401,708**

LTA Base Estimate by Physical Component

C - Labrador Transmission Assets	
C.1 - OL Transmission CF-MF	$288,254,205
6140 - Muskrat Falls to Churchill Falls	$286,136,710
6180 - 735 kV AC line at Churchill Falls	$2,117,495
C.2 - Switchyards	$192,087,214
1500 - Accommodation Complex / Temporary Buildings	$7,520,683
1570 - Site Services	$9,822,840
4000 - Switchyards - General	$6,898,868
4100 - Churchill Falls Extension	$113,795,889
4300 - Muskrat Falls Switchyard	$50,425,661
7520 - 315 kV / 138 kV Switchyard at Muskrat Falls	$3,623,272
C.3 - Telecomunications	$15,467,507
1450 - Construction Telecommunications - LTA	$2,115,329
9250 - Operations Telecommunication System - LTA	$13,352,178
C.4 - Spares	$2,960,613
0000 - No Physical Component	$1,500,000
6140 - Muskrat Falls to Churchill Falls	$1,460,613
Grand Total	**$498,769,539**

LITL Base Estimate by Physical Component

B - Labrador - Island Transmission Link	
B.1 - Converters/Transition Compunds/Synch Condensers/SP Switchyard	$639,805,781
1110 - Access Roads	$3,500,000
4500 - Soldiers Pond Switchyard	$99,132,568
7120 - New Synchronous Condensers	$110,776,909
8200 - dc Specialties - Converter Stations	$11,788,175
8210 - Labrador Converter Station	$179,430,514
8220 - Soldiers Pond Converter Station	$187,199,083
8500 - dc Specialties - Transition Compounds	$10,498,800
8510 - Transition Compound - Labrador	$19,313,421
8520 - Transition Compound - Northern Peninsula	$18,166,312
B.2 - Electode Sites/Island Upgrades	$77,613,063
6221 - Island Overland DC Transmission	$1,500,000
6310 - Electrode Line - Labrador	$215,030
6320 - Electrode Line - Newfoundland East	$3,493,381
7110 - Unit Conversion at Holyrood to Synchronous Condensers	$30,800,000
7130 - Breakers	$6,700,000
7140 - AC Line Rebuilds	$7,536,772
8600 - dc Specialties - Electrodes	$420,745
8610 - Electrode Labrador	$14,896,752
8620 - Electrode Newfoundland East	$12,050,384
B.3 - OL Transmission MF-SP	$929,045,619
6200 - HVdc Overland Transmission	$3,800,000
6221 - Island Overland DC Transmission	$532,587,951
6224 - Labrador Overland DC Transmission	$386,800,163
6310 - Electrode Line - Labrador	$4,823,487
6320 - Electrode Line - Newfoundland East	$1,034,018
B.4 - SOBI Marine Crossing	$337,440,262
8110 - dc Specialties - Marine Crossings - SOBI - General	$110,000
8111 - SOBI Cables Supply	$173,366,767
8113 - SOBI Landfall	$85,344,240
8114 - SOBI Protection	$78,619,255
B.5 - Telecommunications	$21,433,995
1430 - Construction Telecommunications - Island Link	$3,745,517
9200 - Operations Telecommunications Systems	$2,000,000
9230 - Operations Telecommunication System - Island Link	$15,688,478
B.6 - Spares	$6,724,135
0000 - No Physical Component	$2,000,000
6200 - HVdc Overland Transmission	$4,724,135
Grand Total	$2,012,062,855

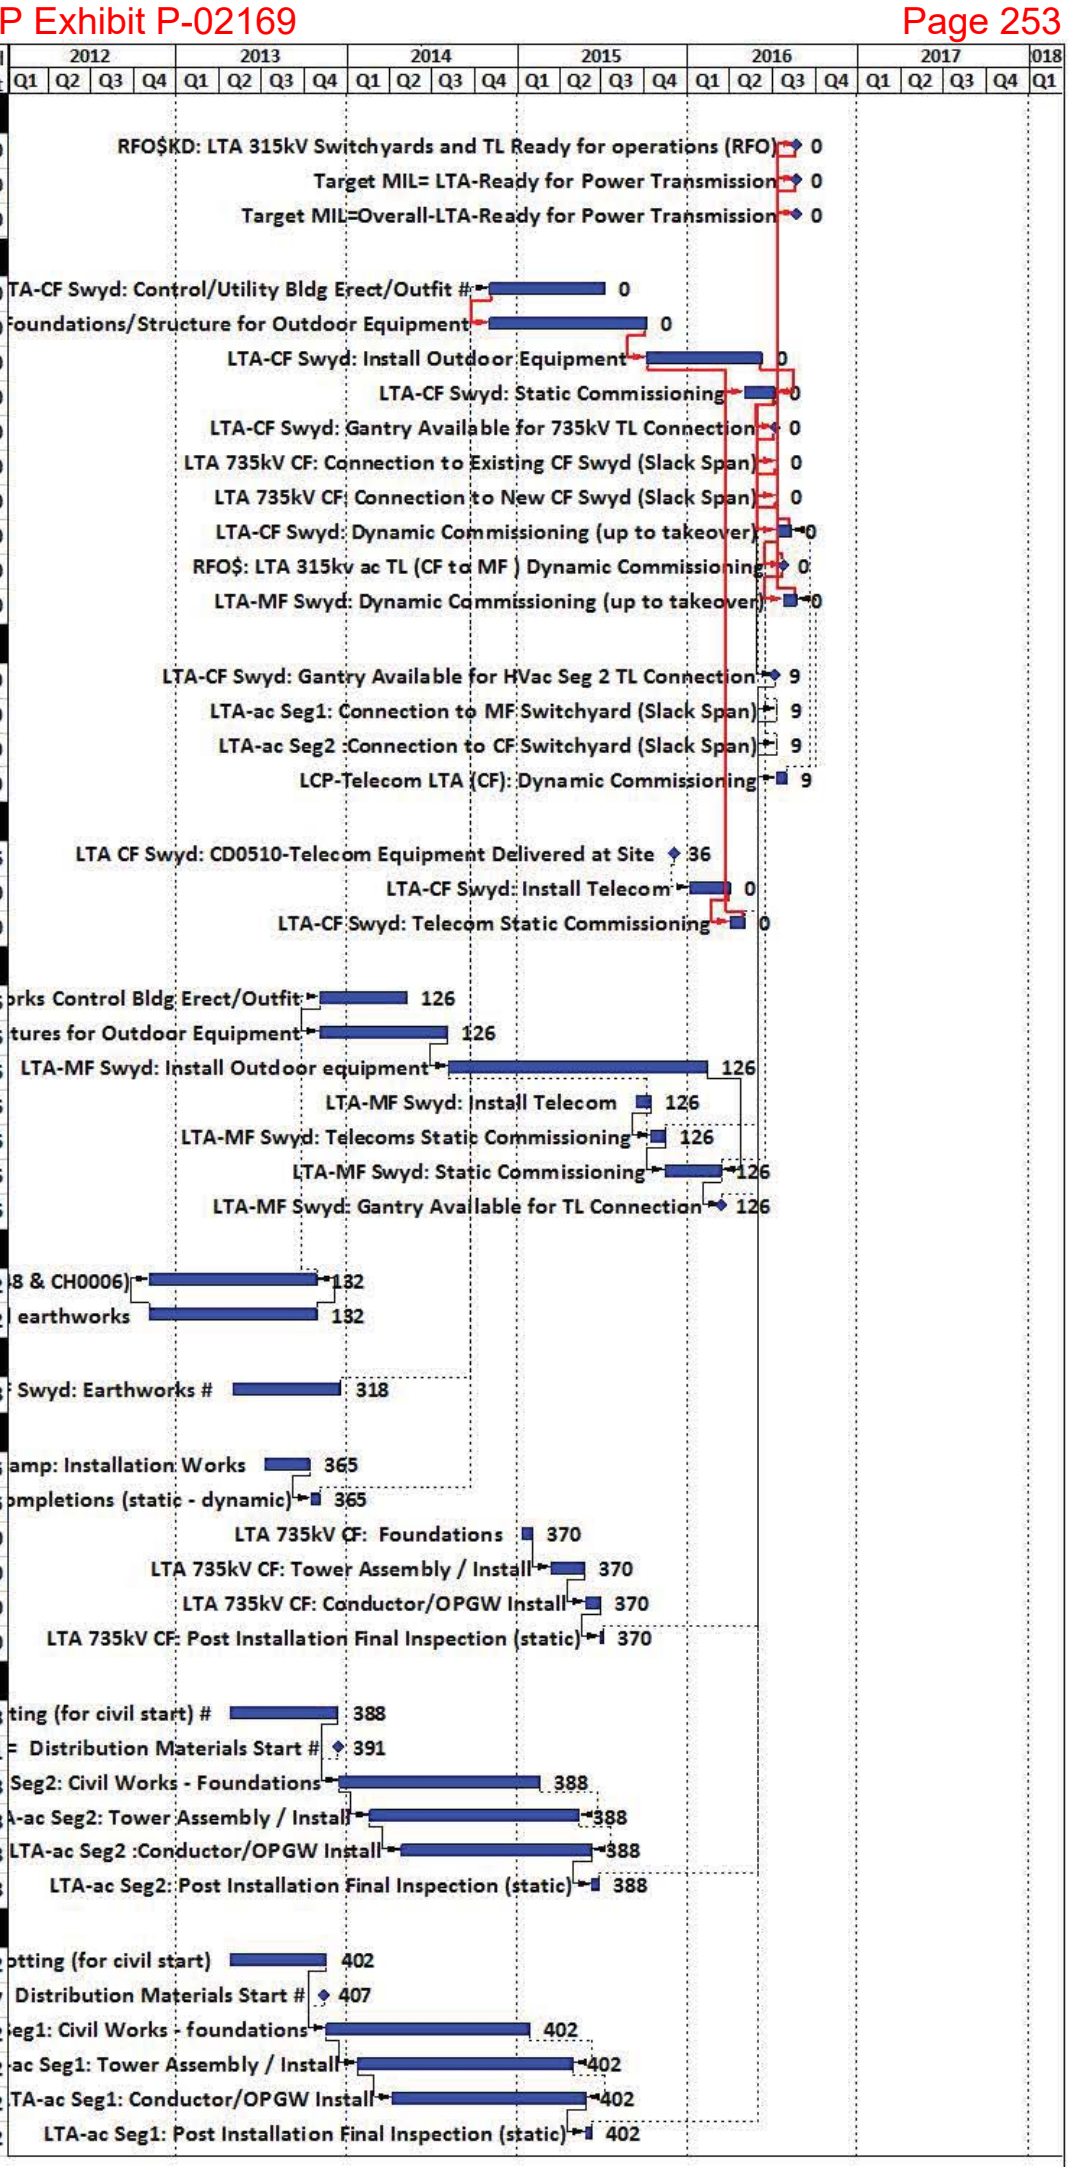
LTA-CF Swyd: Earthworks #	318
LTA Sub- Critical Path 7	
LTA-CF Camp: Installation Works	365
LTA-CF Camp: Completions (static - dynamic)	365
LTA 735kV CF: Foundations	370
LTA 735kV CF: Tower Assembly / Install	370
LTA 735kV CF: Conductor/OPGW Install	370
LTA 735kV CF: Post Installation Final Inspection (static)	370
LTA Sub- Critical Path 8	
LTA-ac Seg2: ROW Clearing / Survey & Tower Spotting (for civil start) #	388
LTA HVac Seg2: CT0319 = Distribution Materials Start #	391
LTA-ac Seg2: Civil Works - Foundations	388
LTA-ac Seg2: Tower Assembly / Install	388
LTA-ac Seg2 :Conductor/OPGW Install	388
LTA-ac Seg2: Post Installation Final Inspection (static)	388
LTA Sub- Critical Path 9	
LTA-ac Seg1: ROW Clearing / Survey & Tower Spotting (for civil start)	402
LTA HVac Seg1: CT0319 = Distribution Materials Start #	407
LTA-ac Seg1: Civil Works - foundations	402
LTA-ac Seg1: Tower Assembly / Install	402
LTA-ac Seg1: Conductor/OPGW Install	402
LTA-ac Seg1: Post Installation Final Inspection (static)	402



Activity Name	Total Float
MFG Critical Path - Key Dates	
KD=MFG Reservoir-End of Spring Flood (May 1 2017)	0
KD=MFGen Unit 1 Ready for Operations (RFO)	0
MFG Critical Path	
MFG-SpilDiv2 Place Stoplogs and Dewater Bay 2	0
MFG-SpilDiv2 Place Stoplogs and Dewater Bay 4	0
MFG Reservoir -Impoundment	0
MFG-PH Completions: WATER Available- Unit 1	0
MFG-PH Completions: Dynamic Comm. (Wet Tests to takeover) T/G- Unit	0
MFG-PH Completions: Ready for Power Generation - Unit 1	0
MFG Sub-Critical Path 1	
MFG-PH Excavation: Powerhouse (incl Cofferdam 3)	6
KD=MFG-PH: CH0006 Bulk Exca Equip Mob Complete	6
MFG-PH Civil: South Service Bay (Including Enclosure)	6
MFG-PH Civil: Unit 1 Structure Ph 1 (bldg enclosed)	6
MFG-PH Install: T/G Embedded Parts & Structure Ph 2 Unit 1	6
MFG-PH Install/Comm: T/G Ancillary Systems - Unit 1	6
MFG-PH Install/Comm: Bldg Utility Systems - Unit 1	6
MFG-PH Install: Pit free - Unit 1	6
MFG-PH Install: Turbine/generator - Unit 1 Pit Free to Dry Test	6
MFG-PH Completions: Static Comm. (Dry Tests) - Unit 1	6
MFG-PH Completions: Ready to Turn - Unit 1	6
MFG Sub-Critical Path 2	
MFG-SpilDiv1: Excavation - Spillway	6
MFG-SpilDiv1: Civil Works: Cofferdams 1/ 2/Riverside RCC(10)	6
MFG-SpilDiv1 Civil:: Ph1 Foundation Preparation - Spillway	6
MFG-SpilDiv1 Civil: Ph1 Structures - Spillway	6
MFG-SpilDiv1 Install: Hydro-Mech Spillway (gates/Stoplogs)	6
MFG-SpilDiv1 Install: Install Telecom	6
MFG-SpilDiv1 Materials: CD0510-Telecom Equipment Delivered at Site	6
MFG-SpilDiv1 Install: Telecom Static Comm	6
MFG-SpilDiv1 Completions: Hydro-Mech Spillway (static - dynamic-gates/	6
KD=MFG Spillway -Phase I Ready for Diversion	6
MFG-SpilDiv1: Civil Works:Cofferdams 1/2/Riverside RCC(10) Removed	6
MFG-North Dam: Upstream Cofferdam(5)	6
MFG-North Dam Earth: Foundation Preparation	6
MFG-North Dam: CVC D/S Walls & Abutments	6
MFG-North Dam: RCC	6
MFG-North Dam: CVC Crest & D/S Facing	6
MFG Reservoir-Ready to Impound	6
MFG Sub-Critical Path 3	
MFG-North Dam: Downstream Cofferdam(6)	7
MFG Sub-Critical Path 4	
MFG-SW CH0007 Mobilization Complete (Work can begin)	15
MFG Sub-Critical Path 5	
MFG-South Side Site Access Bridge Rebar - Transport To Site	23
MFG-South Side Site Access permanent McKenzie bridge	23
MFG Sub-Critical Path 6	
KD=MFG Reservoir-End of Spring Flood (June 15 2015)	23
MFG Sub-Critical Path 7	
MFG-Camp Installation: Starter Camp (150 bed) and Utilities	50
MFG-Camp Installation: 500 bed sections/Admin bldgs/Utilities	50
MFG-Camp Installation: 1000 bed sections and Utilities	47
MFG-Camp Installation: 1500 bed sections and Utilities	47
MFG-Camp Completions: 1500 bed - Complete	47
MFG Sub-Critical Path 8	
MFG-PH Install: Powerhouse crane	90
MFG-PH Completions: Dynamic Comm. Overhead crane	90
MFG Sub-Critical Path 9	
MFG-North Dam Earth: Curtain grouting	102
MFG-North Dam Install: Outfitting (Lighting/HVAC/Etc)	102
MFG-North Dam Completions: Static - Dynamic Comm (Lighting/HVAC/Et	102
MFG Sub-Critical Path 10	
MFG-PH Civil: South Service Bay Bldg Utilities	123
MFG-PH: Install Telecom South Service bay	123
MFG-PH: Static - Dynamic Checks South Service Bay Utilities	123
MFG-PH Telecom: Static Comm-South Service bay	123
MFG Sub-Critical Path 11	
MFG-SpilDiv1 Civil: Ph1 Foundation Preparation - other Structures req fo	147
MFG-SpilDiv1 Civil: Ph1 Structures - other Structures req for Diversion	147

APPENDIX N

Milestone Schedule and Major Contract Packages Completion

This page intentionally left blank

Estimated Award and Completion Date
Major Contract Packages - Lower Churchill Project

Major Packages required for Final Disclosure				Updated Award Date - IE Key Contracts (01-Mar-2013)
		PO/Contract Award Dates		
Muskrat Falls (MF)				
Pkg Ref. No.	**Contract Pkg. Title**	**Baseline Finish**	**Forecast Finish**	
CH0002	Supply and Install Accommodations Complex Buildings			Contract Awarded on Oct. 22, 2012
CH0003	Supply and Install Administrative Buildings.	22-Apr-13	2-Aug-13	
CH0004	Construction of Southside Access Road			Contract Awarded on May 25, 2012
CH0005	Supply and Install Accommodation Complex Site Utilities.	7-May-13	16-Aug-13	
CH0006	Construction of Bulk Excavation Works			Contract Awarded on Nov. 06, 2012
CH0007	Construction of Intake and Powerhouse, Spillway and Transition Dams	31-Jul-13	31-Jul-13	
CH0008	Construction of North Spur Stabilization Works	1-Oct-13	26-Jan-14	
CH0009	Construction of North and South Dams	30-May-14	9-Jul-14	
CH0023	Construction of Reservoir Clearing - South Bank	16-Aug-13	16-Aug-13	Could be awarded earlier (based on CH0024 award expected in May 2013)
CH0030	Supply and Install Turbine and Generators			Contract Awarded on Jan. 02, 2013
CH0031	Supply and Install Mechanical and Electrical Auxiliaries (MF)	7-Mar-14	20-Mar-14	
CH0048	Construction of Site Clearing Access Road & Ancillary Areas			Contract Awarded on Apr. 20, 2012
CH0050	Supply Concrete Including Batch Plant (MF) **Deleted Scope now in CH0007 Package**			
PH0014	Generator Step-Up Transformer	29-Jul-13	29-Jul-13	
PH0016	Generator Circuit Breakers	31-Jul-13	31-Jul-13	
Labrador Transmission Assets (LTA)				
CT0319	Construction of 315 kV Hvac Transmission Line (MF to CF)	9-Apr-13	21-May-13	
CT0341	Clearing of Right of Way for 315 kV Hvac Transmission Line (MF to CF)	16-Apr-13	16-Apr-13	Bids In - Award Pending
CD0502	Construction of AC Substations & Synchronous Condenser Facilities	10-Jul-13	10-Jul-13	
CD0503	Construction of Earth Works at Power Distribution Sites	3-Apr-13	18-Apr-13	
PD0505	Switchyard Equipment AC Substations CF, MF, and SP **Deleted Scope now in CD0502 Package**			
Labrador Island Transmission Link (LITL)				
CD0501	Supply & Install Converters, Harmonic Filters and Transition Compounds	15-Dec-13	22-Oct-13	
CD0502	Construction of AC Substations and Synchronous Condensers Facilities	24-Mar-14	15-Dec-13	
CD0503	Construction of Earth Works at Power Distribution Sites	10-Jul-13	10-Jul-13	
CD0508	Construction of Electrode Sites	30-Apr-14	30-Apr-14	
CD0534	Supply and Install Soldiers Pond Synchronous Condensers	31-Jan-14	31-Jan-14	
CT0327	Construction of 350 kV HVdc Transmission Line - Section 1	23-Oct-13	23-Oct-13	
CT0343	Clearing of Right of Way for HVdc Transmission Line - Section 1 **Deleted Scope now in CT0327**			
CT0345	Clearing of Right of Way for HVdc Transmission Line - Section 2	7-Mar-14	7-Mar-14	
CT0346	Construction of 350 kV HVdc Transmission Line - Section 2	23-Sep-14	23-Sep-14	
LC-SB-003	Strait of Belle Isle Submarine Cable			Contract Awarded on Nov. 29, 2012
	After August 2013
