Subject: CH0009 - Barnard-Pennecon Response to Inquiry

---

Hi Ed & Ken,

In response to your inquiry, we offer the following responses:

- Subcontractors are not part of the Labour Target Model
- The downstream sloped / battered dam face will have the equivalent look as finished concrete. The CVC will be placed between the RCC and a concrete form. Barnard's RCC superintendent, Dustin Burke has experience completing this type of dam at Taum Sauk. Barnard has ample experience in both the RCC and CVC, including numerous CVC battered face concrete walls, which is essentially what we are planning to construct for you here at Muskrat. Below and attached are some pictures of the sloped finish CVC typical of this type of construction.
- o I'd like to note a correction in what I told you earlier. The overall savings does stem from

increased productivity and schedule, however, with this method, the CVC quantity did increase and the RCC decreased, which was reflected on our bid form.

If you have any questions about this, please contact me at (406) 586-1995.

Thanks, Derek
