DOCUMENT REVIEW
Comment Sheet (Cont'd)

Comments:

Item No.	Section/Paragraph /Page/Sheet	Comment	Response	Status
		is very useful, and would be beneficial in the Executive Summary (as title would suggest)		
	9 - Contract Admin	Good to see the Contract Administration Statistics in this month's report. Please add another column that shows # of Open Items. Reflect the open items in Appendix G for Contract Admin logs. No need to report on closed items. (Try to shorten Monthly Report. Logs are available if required) Contract Admin logs are duplicated in this month's report.		
	10 - Project Controls & Financial Status	LCP recognizes the considerable effort Astaldi has put into using Cost Reporting Templates provided by LCP. LCP suggests to incorporate the "Earned Value" Column from the original reporting structure (first 3 pages of Appendix H) into the new format, and this would eliminate another report. It has come to LCP's attention that Astaldi "may" be reporting on the Actual Cost of staff in this report. Please confirm that the Actual Cost and Forecast to complete for Staff are based on the contractual hourly rates, and not the actual cost of the staff. Labour Earned Value Analysis Narrative and Report in Appendix H Cumulative to Date Cost Variance do not match. Narrative shows -$104,594,924 & Report shows -$99,594,925. It appears Attendant Labour has the correct hrs, but not cost forecast. LCP recognizes the labour forecasting tools to determine the cost forecast, but must remind Astaldi of Lmax = Target Cost of Labour (defined in Contract & Change Orders) + 64.3M.

DOCUMENT REVIEW
Comment Sheet (Cont'd)

Comments:

Item No.	Section/Paragraph /Page/Sheet	Comment	Response	Status
		Actual hours up to Dec 27, 2014 shows 2,296,490 hrs. Incurred Cost Report submitted in December (estimate) had 2,493,836 hrs + "Extras / Others" for a total of 2,554,690 hrs. There is a current variance of 258,200 hrs. LCP was of the understanding that the Cumulative to Date hours would be the Incurred hours which is a combination of Actual + forecast (accrued) hours, and would not change between Incurred Cost (prior to month end) and Cost Forecast (post month end). Submitting very similar documents with different #'s is very confusing. Incurred hrs in the report are Actual hrs + a few weeks of accruals. These are "trued" up or corrected every month, and should be very accurate for reporting purposes. LCP has noticed that Astaldi is approximately $30.2M over budget to date for Direct Labour, and forecasting to be $30.2M over budget at completion. While we agree measures are being put in place to drastically revamp construction performance, increasing Performance from a current PF of 0.275 (To Date) to 1.0 going forward (remaining work gets completed on budget) is a monumental task and we must remain vigilant to track against this assumption and revise forecasts when Astaldi gets some run-time against the changes. Page 3 of Appendix H has a couple of math errors in the Contractual hours column and thus in the Estimate at Completion and Variance columns. This sheet summarizes Direct hrs by Structure, which is also incorporated into template provided by Nalcor

DOCUMENT REVIEW
Comment Sheet (Cont'd)

Comments:

Item No.	Section/Paragraph /Page/Sheet	Comment	Response	Status
		Nalcor does not necessarily agree with Items termed "Changes" with the exception of Approved Change Orders. This will be determined by LCP & Astaldi Contract Administration, and should be reported in a similar fashion. Approved Change Orders have a Labour and Non-Labour component and can be added to the Contractual Amount. Going forward LCP and Astaldi should work towards properly reporting on the costs termed "changes." Productivity Chart showing the productivity forecast (Hashed line) looks aggressive in the near term of 2015 No need to include the data sheet for the Productivity charts		
	Appendix A Org Charts	Org Chart does not reflect Astaldi's organization as of the end of December. Please update for January but do not include in Monthly Report in Future.		
	Appendix D – Planning	*Section 1* – Concrete volume poured is mentioned with no mention of planned to date volume. Should be addressed in Future Submissions. *Section 1.1 Schedule Performance Index* • Need to have a "Notes" Column populated with comments on effect on schedule dates dues to change from previous month. Planned and Actual Direct hrs to be reflected in table. *Section 1.3 Status & Mitigation / Acceleration* • For each issue, need to address o Status

List of Appendices

1. EXECUTIVE SUMMARY

At the end of the current reporting period, Astaldi employed **1,676** employees that were working on Logistics, Procurement, Engineering, Construction and supervision of the work. They are divided into the following categories: 198 Staff, 988 Union direct workforce for the various construction activities, 475 employees working for the Subcontractors and 15 Consultant employees, as shown in the figures below. The Astaldi Organization Chart can be found in *Appendix A*. Please note that the Human Recourses Department is current in the process of developing a new style of organization chart that will be available in the New Year.

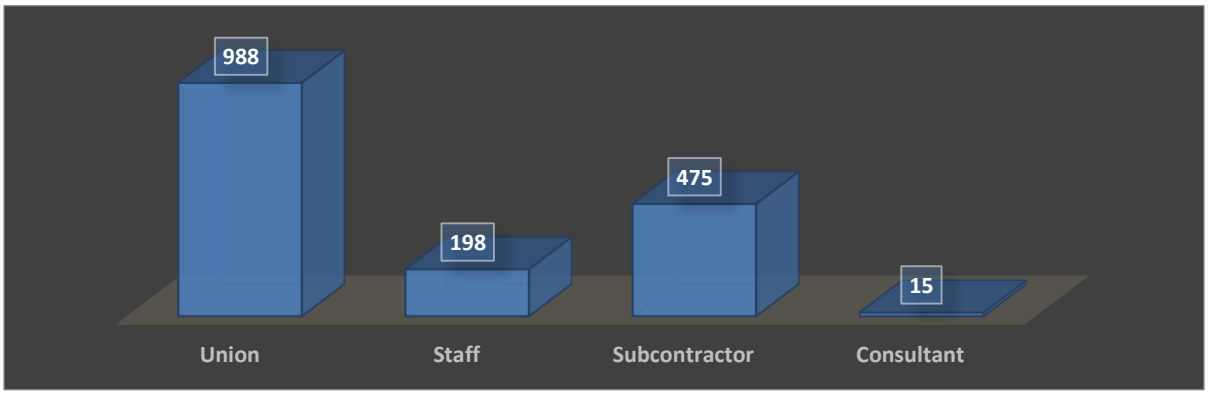

Figure 1: Number of employees at the end of reporting period

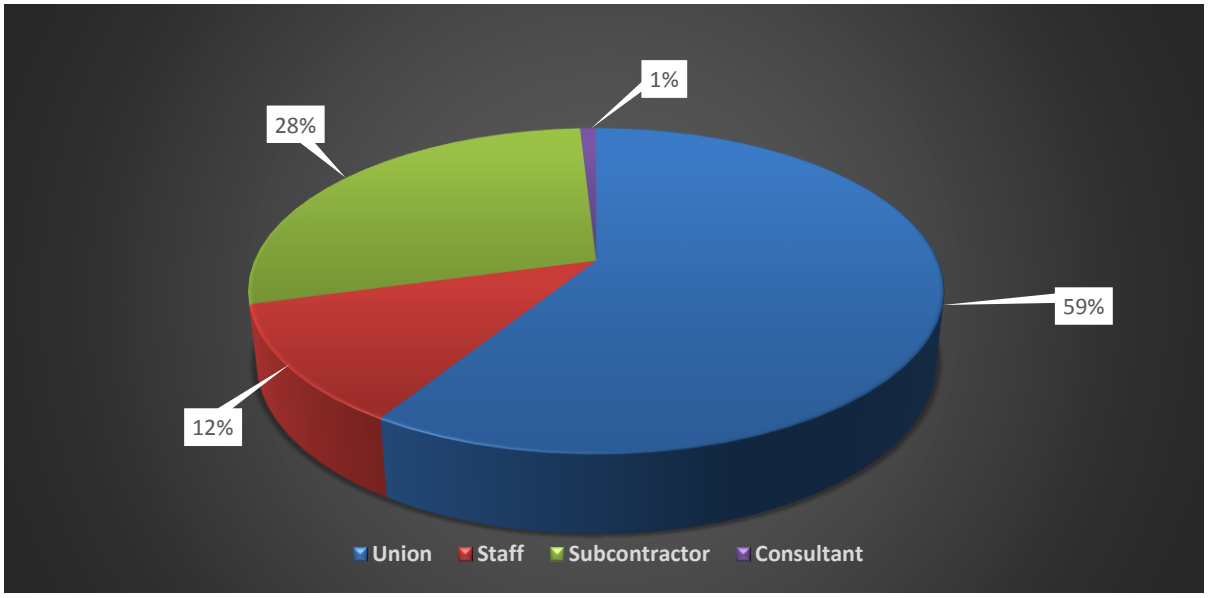

Figure 2: Astaldi workforce distribution

Concrete Volume poured during this period: **6,142 cubic meters**

Spillway Progress:

The following pier pours were completed: SWP1A-03, SWP3A-02, SWP4A-03, SWPSC-03, SWPSA-02, SWPSB-01, SWPNA-03, and SWPNB-01.
Planned activities for next month: Continue Pours of the spillway piers with a primary focus on upstream pours. This will allow the progression of the north and center transition dams.

Powerhouse Progress:

The following pours were completed: SBBNB/C-19 (Overbreak), SBB2B/C (Mubslab).

Planned activities for next month: I1BNB-00, I3BSA-00. Rock cleaning for upstream and downstream shafts is being planned and construction activities will progress with completion of two crane pads, one at Unit 1 D/S (at SE corner) and second at El. +15.20m. SBB1B-00 will be casted after cleaning of ice and snow from the area and completion of 1st crane pad. The remaining work will continue with 2nd crane pad. SBB1A-00 will be casted after cleaning of ice and snow from the area.

Transition Dams Progress:

The following pours were completed: STU1A-01, CTU4A-04 (1/2)

Planned activities for next month: Work on the south and center transition dams will be temporarily halted once the active pours have been completed in order to aim our focus on critical activities. Upon completion of these critical activities, work in the transition dams will resume.

Separation Wall Progress:

The following pours were completed: WLW4A-03, WLW6A-03.

Planned activities for next month: Work on the separation wall will be temporarily halted once the active pours have been completed in order to aim our focus on critical activities. Upon completion of these critical activities, work on the separation wall will resume.

Integrated Cover Structure (ICS) Progress (Units 1 & 2 Only):

Structural Steel Fabrication Completed: **100%**

Cladding Completed (modified scope): **100%**

Decking Completed: **100%**

For detailed information related to the progression of the project as well as updates on milestones and issues we have encountered please refer to *Appendix D – Planning Report*

2. HEALTH AND SAFETY

The following charts & tables summarize health and safety performance indicators and statistics.

Table 1: Health and Safety performance indicators

	Health and Safety Performance	Period	YTD	Project
Lagging Indicators	Number of First Aid & Medical Aid Incidents	4	136	136
	Orientations Completed	87	2,652	2,652
	JSA's Completed	20	162	162
	Number of Property Damage Incidents	7	75	75
	Number of Near-Miss Incidents	1	28	28
	Number of JHA's/JSA's/FLHA's Conducted	14,439	94,915	94,915
Leading Indicators	Number of High Potential Near Misses	2	39	39
	Number of Tool Box Meetings	1,584	8,005	8,005
	Number of Management Inspections	5	36	36
	Number of Safety Inspections	629	2,220	2,220
	Number of Weekly Safety Meetings	175	581	581

Table 2: Health and Safety performance indicators

Entire Project	
First Aid Cases	126
Medical Aid Cases	10
Modified Duty Cases	24
LTI's	1
Fatalities	0
Modified Work Days	295
Property/Equipment Damage	75
Vehicle Incidents	1
Security Incidents	6

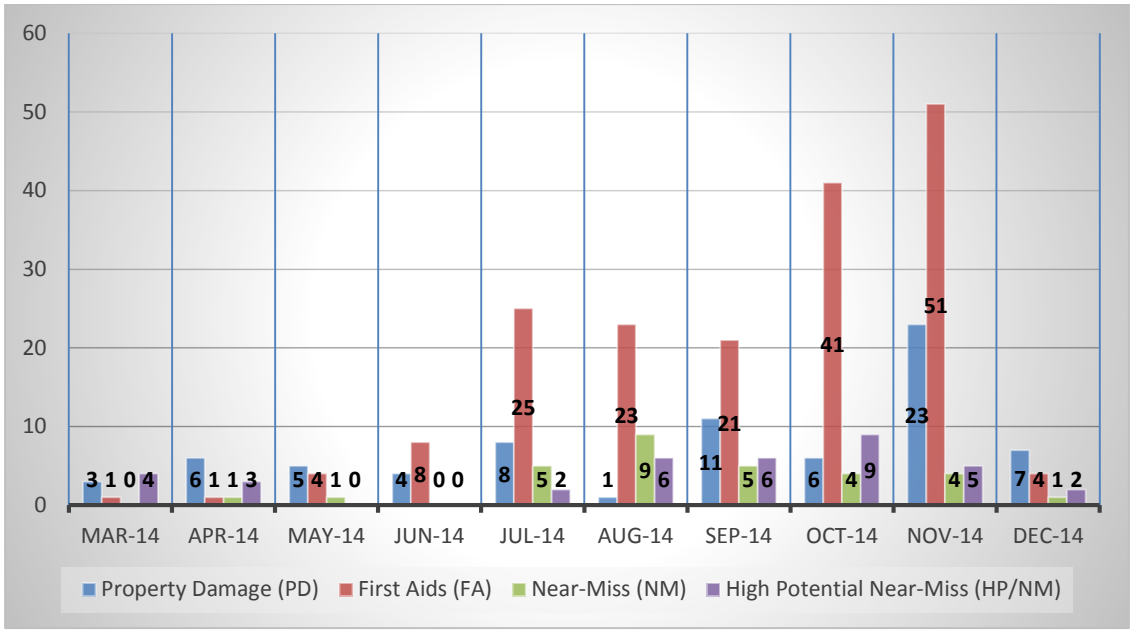

Figure 3: Health and safety statistics

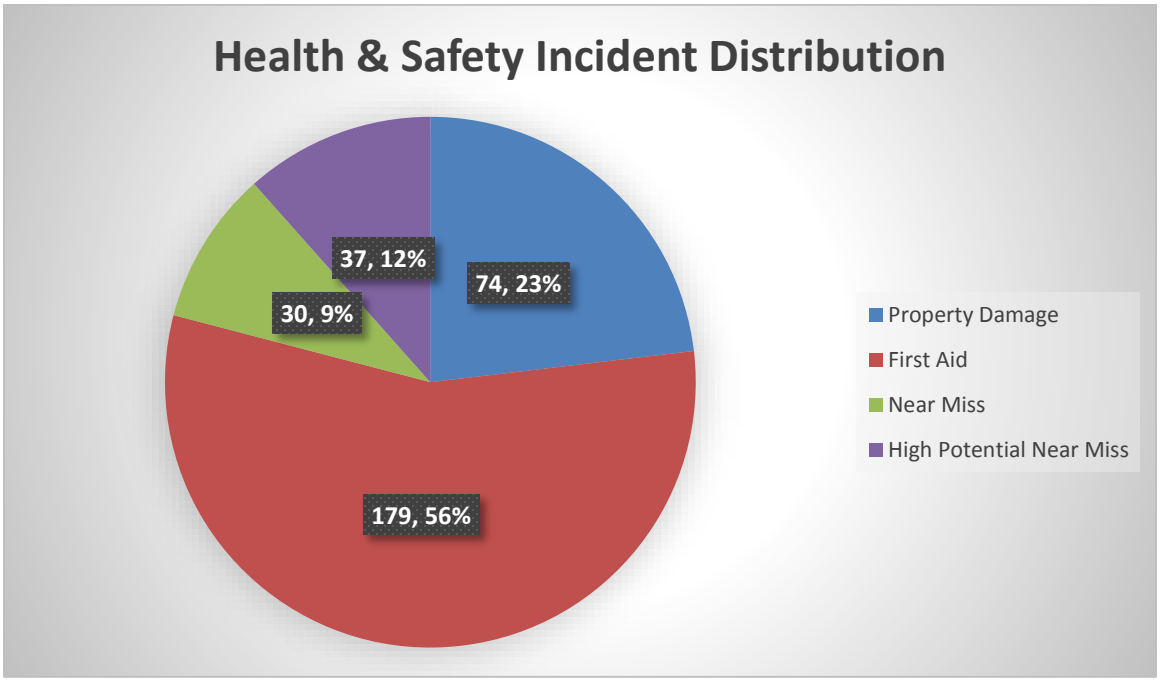

Figure 4: Incidents distribution

Table 3: First Aid Incident Log

#	Case No.	Date	Description
1	2014-383	29-11-2014	Worker struck thumb.
2	2014-387	04-12-2014	Worker slipped exiting crawler crane.
3	2014-397	14-12-2014	Worker twisted back installing/aligning tire.
4	2014-402	17-12-2014	Worker slipped, causing an abrasion to palm of hand.

Table 4: Medical Aid Incident Log

#	Case No.	Date	Description
1	2014-391	07-12-2014	Worker strikes chin on plywood.
2	2014-400	15-12-2014	Worker stuck head on cross bar.

Table 5: High Potential Near Miss Log

#	Case No.	Date	Description
1	2014-389	03-12-2104	Crane outrigger came off pad.
2	2014-394	09-12-2014	Ice chipper makes contact with 240 volt neutral line.

Table 6: Near Miss Log

#	Case No.	Date	Description
1	2014-388	04-12-2014	Dropped Purlin.

Table 7: Property Damage Log

#	Case No.	Date	Description
1	2014-378	26-11-2014	AWP hits ceiling (ISK-LRM)
2	2014-382	28-11-2014	Damaged 35 ton spreader bar.
3	2014-386	01-12-2014	Trailer slipped making contact with steel beam
4	2014-390	07-12-2014	While backing trailer, roof truss makes contact with headache rack.
5	2014-392	07-12-2014	Jib of crane makes contact with steel knocking off red reflector
6	2014-396	10-12-2014	Bobcat runs over buried “dead” 120 volt cable
7	2014-398	14-12-2014	Bent fork rack on bobcat after moving scaffold rack.

3. ENVIRONMENTAL COMPLIANCE

The following tables provide statistics on key performance indicators, reportable spills, hazardous & non-hazardous waste disposal, non-conformities, water usage and aggregate usage for the purpose of road maintenance. The monthly fuel consumption log can be found in *Appendix B*.

Table 8: Environmental Key Performance Indicators

	Project Total
Environmental Incidents	113
Environmental Inspections	331
Environmental Non-Conformities	7

Table 9: Summary of Reportable Spills (Nov 25 to Dec 31, 2014)

Date of Incident	Description of Incident (quantity, product type, location)	Clean-up Completed (Y/N)	Report Submitted (Y/N)
2014-11-27	MAIN GATE - truck park area, 500ml of engine oil from a transport truck working for AGF.	Y	Y
2014-11-28	DD LAYDOWN & SOUTH SEPARATION WALL - 1L of diesel fuel in various locations caused by failure to follow refuelling procedures.	Y	Y
2014-11-28	LAYDOWN AREA E- Astaldi Fuel truck had a fuel leak, losing about 1L of diesel to the ground.	Y	Y
2014-11-28	SPILLWAY UPSTREAM - Suspected to have occurred during refuelling, 1 L of diesel lost to the ground next to welding machine.	Y	Y
2014-11-29	SOUTH SEPARATION WALL - 250ml of engine oil lost to the ground from a Sullair Compressor.	Y	Y
2014-12-04	INTAKE - 250ml of hydraulic fluid from vacuum truck, tank overfilled with fluid.	Y	Y
2014-12-06	MAIN ACCESS ROAD, KM 1 - 1L of antifreeze to the road from sand truck.	Y	Y
2014-12-06	CONVERTER YARD - 10L of diesel fuel to the ground from 45kw generator, fuel return line dislocated.	Y	Y
2014-12-07	CONCRETE TRUCK WASH - 2L of glycol from Wacker Neuson Glycol ground heater.	Y	Y
2014-12-08	MAIN ACCESS ROAD, KM 6 Laydown - 1 L of blue diesel exhaust Fluid from busted tank of sand truck.	Y	Y
2014-12-12	POWERHOUSE D-LINE - <1L Hydraulic Fluid from a JLG to the ground, cause by damaged O ring in an accumulation valve.	Y	Y
2015-12-15	LAYDOWN J-1.5 L Hydraulic Fluid from Pen Cal Roll Off Truck-Broken Hydraulic Line causing spill to ground-1.5 l.	Y	Y
2014-12-18	AREA J - 3L diesel-fuel spill underneath a generator discovered possibly from refueling error-3L.	Y	Y

Table 10: Record of Waste Disposal, Hazardous & Non-Hazardous (Nov 25 to Dec 31, 2014)

Date of Disposal	Description of Waste (quantity & type)	Disposal Facility/Contractor	Disposal Record Submitted (Y/N)
NON HAZARDOUS WASTE			
Nov-25	1 x 40m^3 roll off bins (wood/general waste)	PenCal → HV-GB Landfill	n/a
Nov-27	4 x 40m^3 roll off bins (wood/general waste)	PenCal → HV-GB Landfill	n/a
Nov-28	1 x 40m^3 roll off bins (wood/general waste)	PenCal → HV-GB Landfill	n/a
Dec-01	7 x 40m^3 roll off bins (wood/general waste)	PenCal → HV-GB Landfill	n/a
Dec-02	1 x 40m^3 roll off bins (wood/general waste)	PenCal → HV-GB Landfill	n/a
Dec-03	4 x 40m^3 roll off bins (wood/general waste)	PenCal → HV-GB Landfill	n/a
Dec-05	3 x 40m^3 roll off bins (wood/general waste)	PenCal → HV-GB Landfill	n/a
Dec-09	4 x 40m^3 roll off bins (wood/general waste)	PenCal → HV-GB Landfill	n/a
Dec-11	3 x 40m^3 roll off bins (wood/general waste))	PenCal → HV-GB Landfill	n/a
Dec-14	12 x 40m^3 roll off bins (wood/general waste)	PenCal → HV-GB Landfill	n/a
Dec-18	7 x 40m^3 roll off bins (wood/general waste/used tires)	PenCal → HV-GB Landfill	n/a
HAZARDOUS WASTE			
Dec-6	1200L of waste oil	Pardy's → Pardy's Waste Facility	Requested
Dec-16	32 drums of assorted hazardous waste solids	Pardy's → Pardy's Waste Facility	Requested
Dec-17	~10t of contaminated soils	Pardy's → Universal Environmental	Requested
Dec-19	16 drums of assorted hazardous waste solids	Pardy's → Pardy's Waste Facility	Requested

Table 11: Summary of Non-compliances & Corrective Actions

	Non Compliance	Corrective action	Date Finalized
Nov 29, 2015	NCR external CH0007-AST-CAN-NCR-057-01- Failure to Report Spills	Remediate affected areas, removed contaminated waste and place at Hazardous Waste Management Area for removal by a licensed vendor (Incident reports LCP-ACI-2014-11-28-0102, LCP-ACI-2014-11-28-0103 & LCP-ACI-2014-11-28-0104). Review spill reporting and response procedures with all crews, site wide. Review Fuel Handling Procedures with all labourers performing refueling duties. Purchase adequate numbers of jerry cans, proper sized diesel nozzles, spill kits, drip pans.	In progress

Table 12: Water Withdrawn for Project Processes (Nov 25-Dec 31)

	Approximate Volume Withdrawn (L)	Process/Purpose
NOV-2014	284207L from Churchill River	Batch Plant for concrete production
	96700 from McKenzie Brook	Concrete Curing

Table 13: Quarrying and Aggregate Usage (Nov 30-Dec 31)

Quarry/Borrow Source Location	Description of Material Extracted	Quantity Extracted	Process/Purpose
GD-8	Sand	0m^3	

4. QUALITY ASSURANCE & CONTROL

Table 14 depicts the Inspection Test Plans (ITPs) status. No new ITPs have been generated during the reporting period though more ITP's will follow as work progresses.

The hold and witness point for the upcoming three weeks will be for foundation, formwork, reinforcement & waterstop inspections, and concrete placement, monitoring and testing.

Fifteen new NCR's have been issued by Astaldi Canada during the reporting period. Astaldi Canada did not receive any NCRs from LCP. Twenty-six NCRs generated by Astaldi Canada remain open while three NCR's from LCP remain open. See *Appendix C – Quality Department Register* for the ITP and NCR logs.

Table 14: Quality Department ITPs Status

ITP Status	Previous Reporting Period	Current Reporting Period	Total To Date
Number of ITPs Submitted	0	0	8
Number of ITPs Approved	1	0	3

Table 15: Quality Department NCRs, CARs, PARs Status

	Previous Reporting Period	Current Reporting Period	Total To Date	Closed To Date
NCR from LCP	0	0	11	8
NCR from Astaldi Canada	15	11	58	13
PAR/CAR/OFI	1	0	6	2

Table 16: Quality Inspections Performed

Quality Inspections Performed	Previous Reporting Period	Current Reporting Period	Total to Date
	192	210	2379

5. PLANNING

Refer to *Appendix D – Planning Report* for a detailed monthly narrative regarding the status of the project and issues we have encountered. Figure 5 and 6 present a summary level of the overall project schedule.

We are preparing a template for Procurement progress tracking. This template will be used for offline detailed tracking of procurement packages.

Figures 7 and 8 show the overall man-hours and concrete commodity resources histograms respectively. Please note that the primavera schedule files (.xer files) have been submitted along with the monthly report as a separate file.

Appendix D – Planning Report contains the following information:

- Planning Monthly Narrative Report
- Three Month Look Ahead Schedule
- Progress & Commodity Curves and Summary Tables
- Concrete Pour Curves
- Milestone Variance Analysis
- Multiple Float Path Analysis

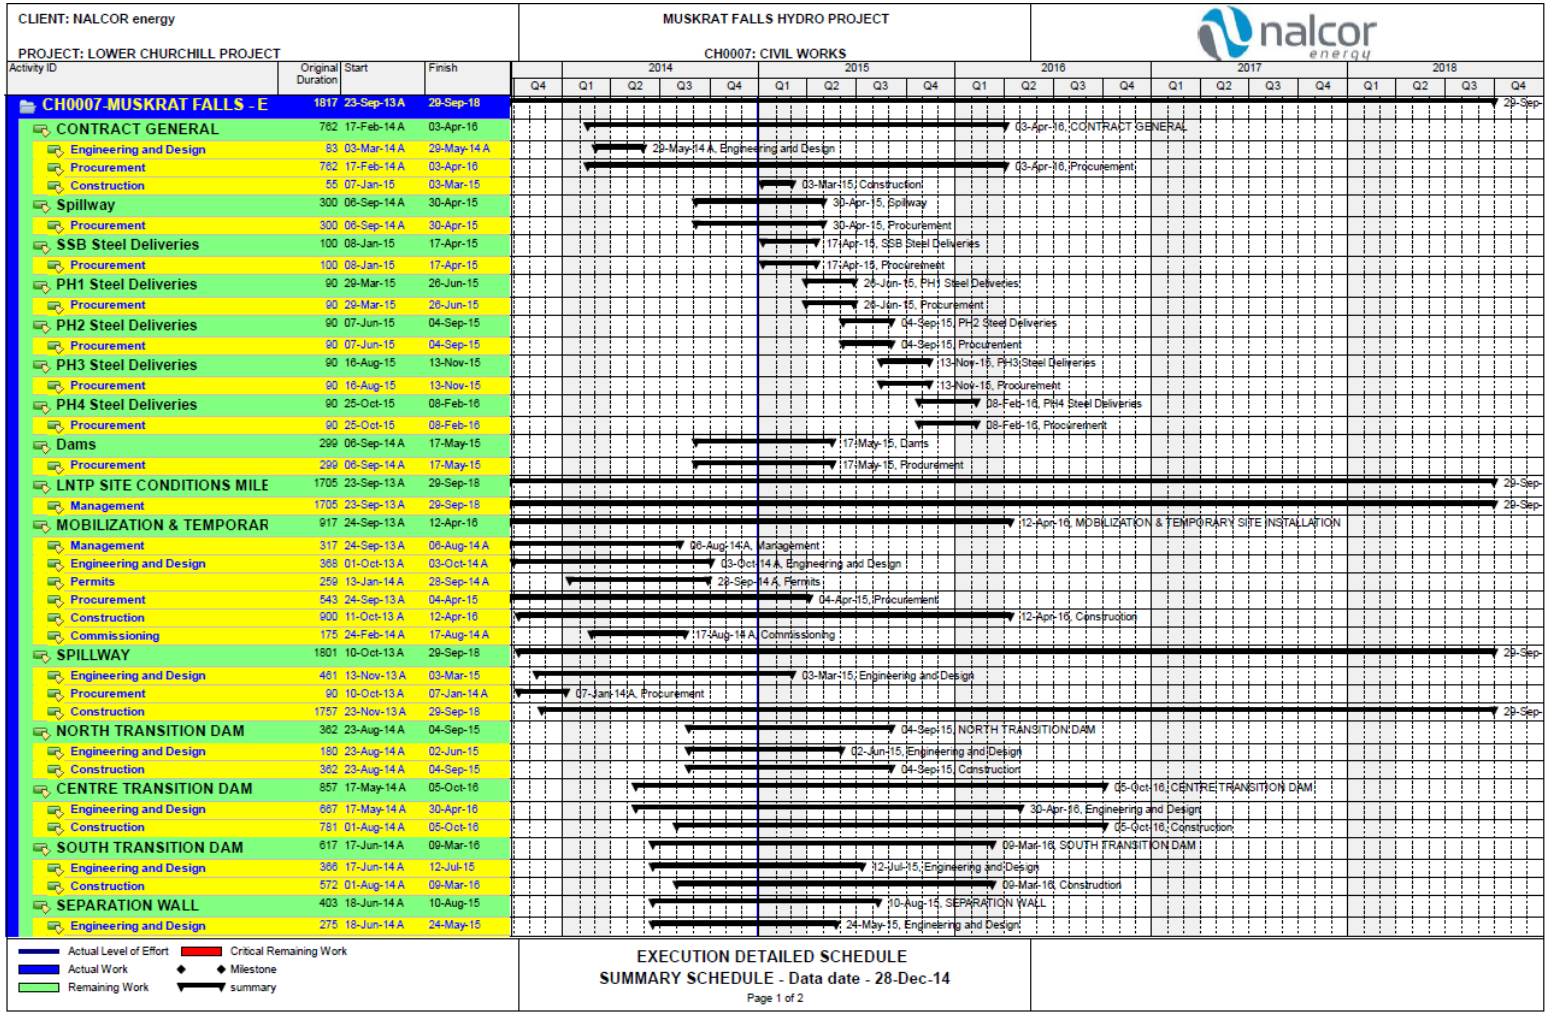

Figure 5: Summary Level for Overall Project Schedule (Part 1 of 2)

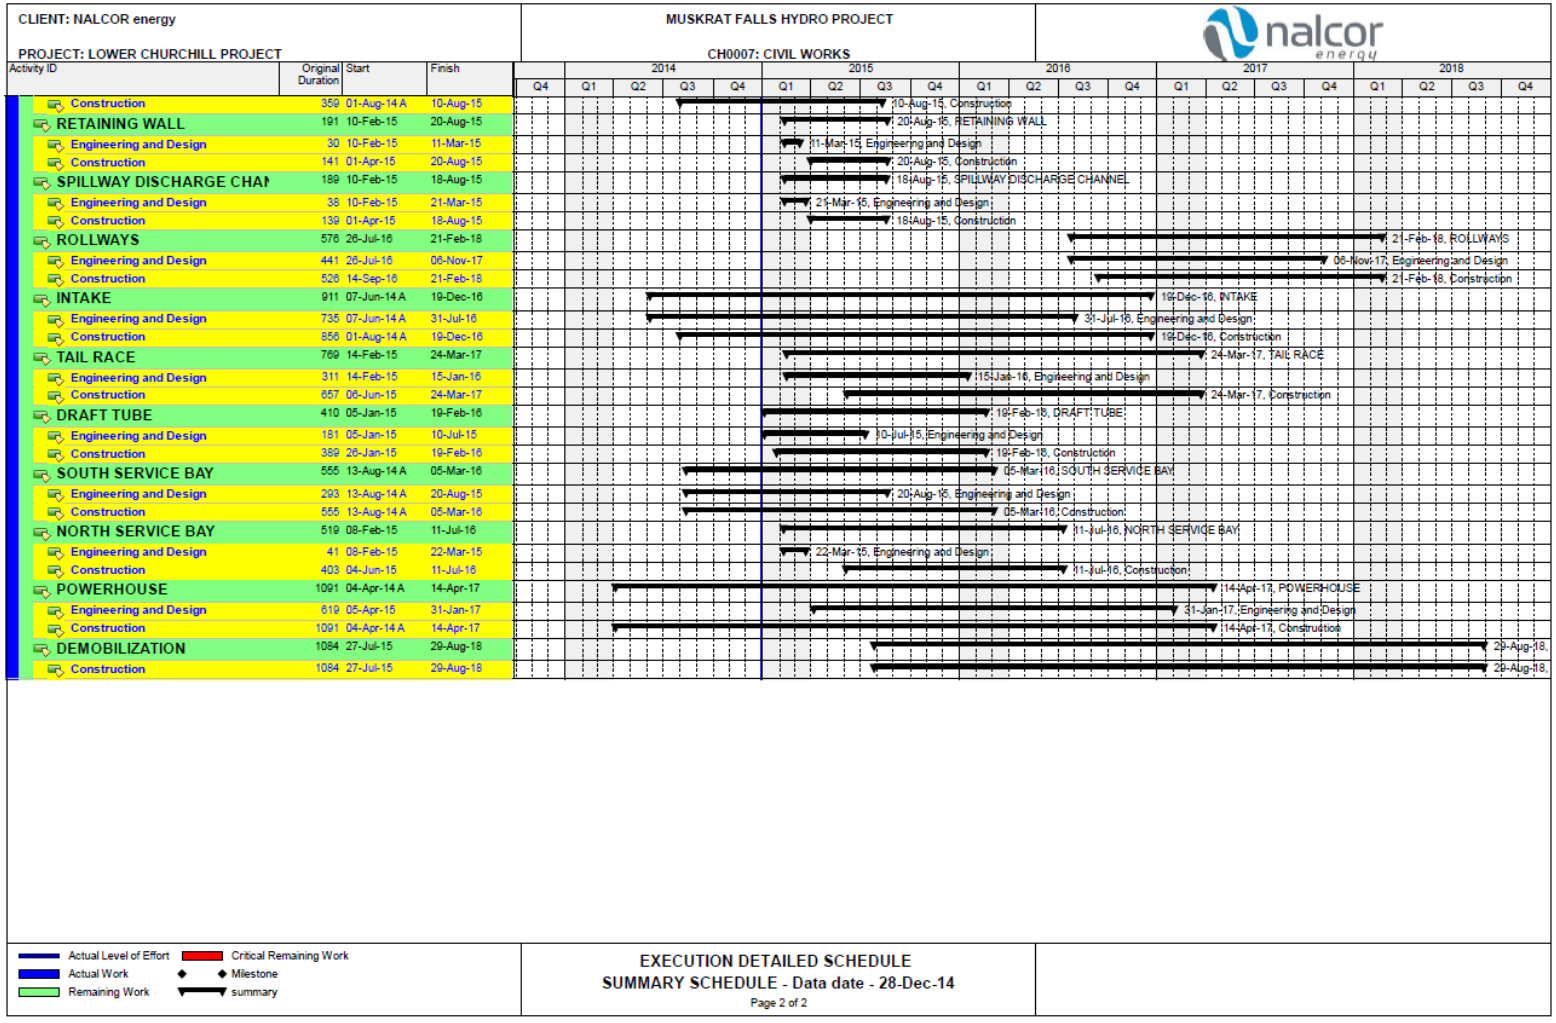

Figure 6: Summary Level for Overall Project Schedule (Part 2 of 2)

CH0007 - MFP Construction - Overall Progress Curve & Manpower Histogram

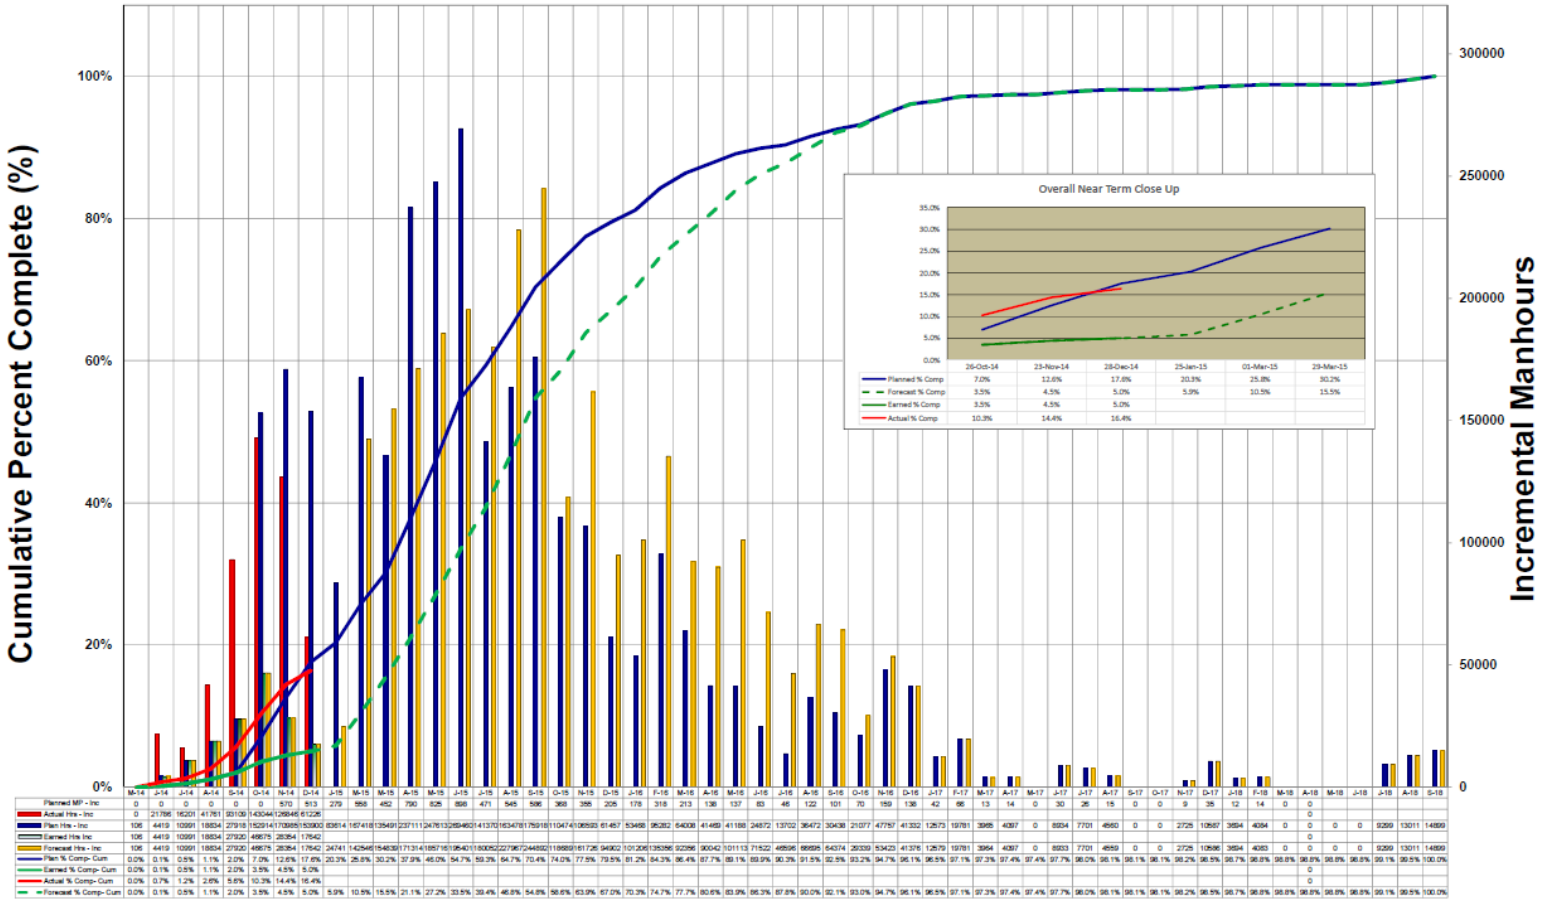

Figure 7: Man-Hours Histogram

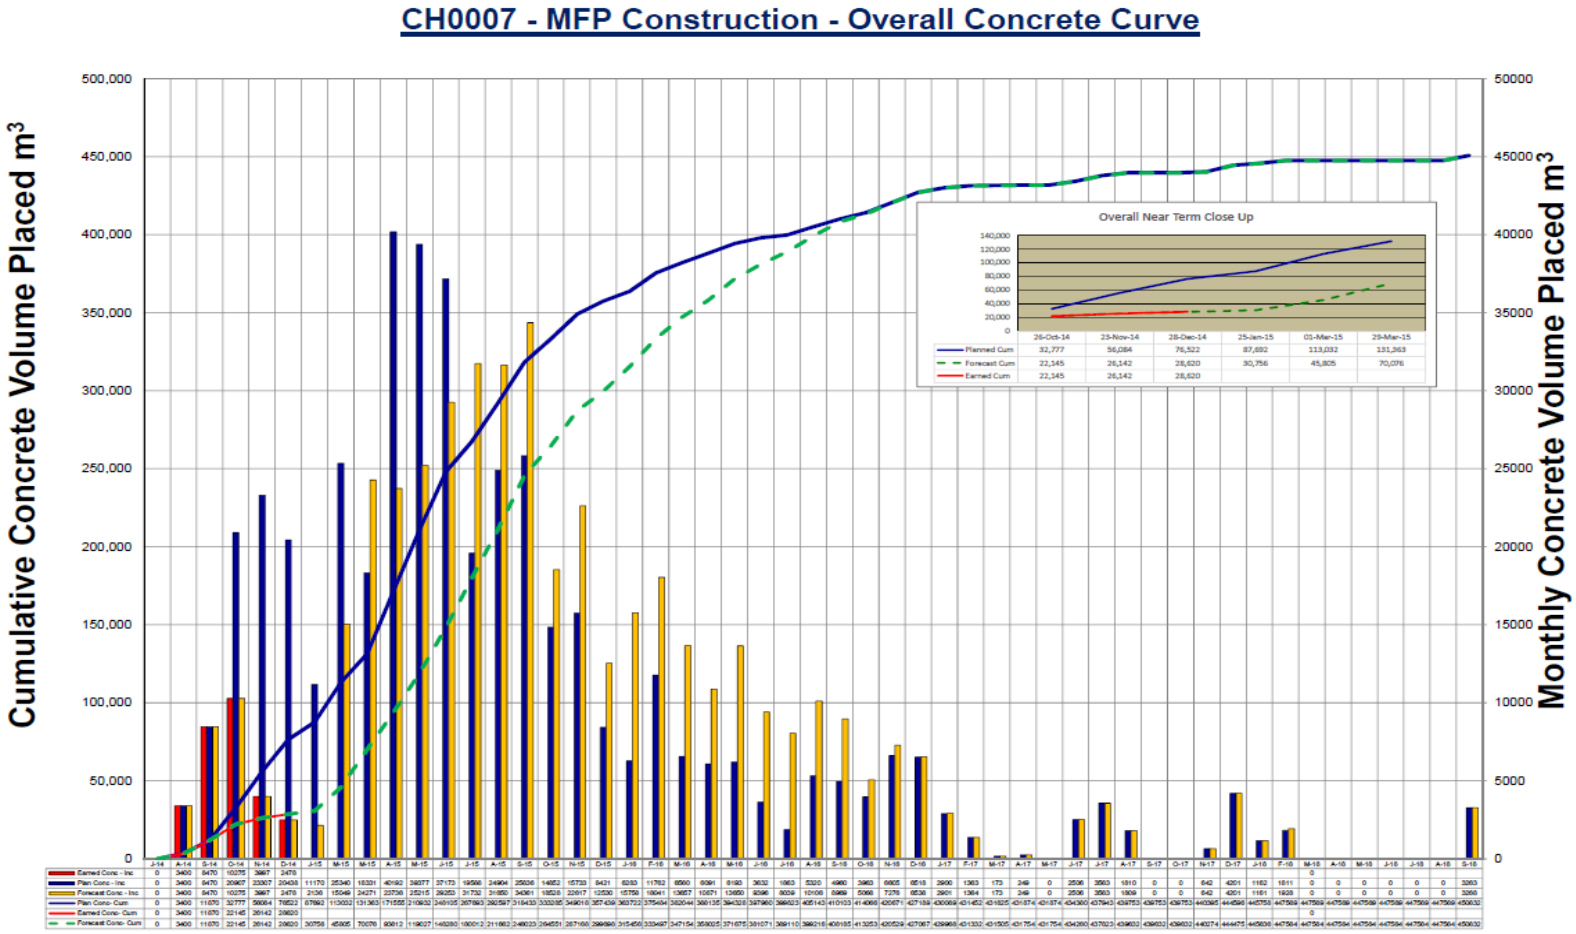

Figure 8: Concrete Quantity Histogram

6. ENGINEERING

Highlights of the Period

- Review of AGF drawings for Centre Transition Dam, monolith 1, Draft tube unit 1, Intake unit 1 (base slab and walls).
- Review of SWS drawings for Intake unit 3 base slab, North transition dam, Service Bay, Centre transition dam, Spillway and Draft tube unit 1.
- Review of DOKA drawings for South and Centre transition dams.
- Wood formwork design and drawings submitted to DCMF.
- Finalization of concrete distribution system in the powerhouse (alternative solution in order to avoid any embedment in the concrete).
- Interface with DPHV for Ladders design inside ICS structure and ICS dismantling sequences.
- Concession issued for ICS clashes in Powerhouse.
- Technical support for fall arrest line for the powerhouse crew.
- Technical interface with Norseman for tarp cover of the ICS structure.
- Technical review of the lighting system in the ICS structure.
- Precast solution for permanent bridges in the spillway structure: finalization and agreement with Astaldi's supplier.
- Finalization and delivery of the Technical Department Management plan.
- Completion of analysis of erection of permanent bridges (upstream and downstream) in the spillway structure.

Three Month Look Ahead

- Submission of Construction Sequences document to the Company.
- Shop drawings submission (main area will be draft tube units 1 & 2, Intake units 1 & 2 and South Service Bay).
- Submission of CON regarding the CJ modification of the intake structure.
- Submission of CON ask for sleeves to embed in the South Service Bay – Slab on the rock area.
- Submission of all the bridges in Spillway structure to the Company.
- Submission of Concession Request for ICS clashes resolution.
- Creation of Document list for all shop drawings and develop tools for the engineering management and progress evaluation.
- Activity of red lines on IFC drawings.

Table 17: Engineering Department Document Status Statistics

	Issued	Open	Closed
Engineering Change Notice (ECN)	8	2	6
Change Request (CR)	2	2	0
Site Instruction (SI)	2	0	2
Site Query's (SQ)	21	2	19
Concession Requests (CON)	15	0	15

7. CONSTRUCTION

The following tables and figures detail the monthly progress in regards to construction.

Executive Physical Progress Summary

December 2014 (Week Ending 27-12-2014)

			ESTIMATED QTY	Previous	Current	Cumulate	% Complete
CH0007	**ALL PROJECT**						
	Concrete	m3	454,063	28,069	1,699	29,767	6.6%
	Rebar	kg	26,534,531	1,889,756	49,662	1,939,418	7.3%

8. PROCUREMENT AND MATERIAL MANAGEMENT

This section of the report is currently under construction. Our goal is to use the template issued by the Nalcor planner in order to identify all procurement packages for permanent works and track progress against each. Once this progress tracking has been completed it will be included. Refer to Appendix E for the register of purchase orders. Please note that all purchase orders with a price of less than $1000.00 have been excluded from the register in order to remove items of little significance.

Table 21: Procurement Statistics

	Reporting Period	YTD	Project
PO's Completed	281	3663	3663

Change Order (CO)	3

Appendix G contains Contract Administration registers.

10. PROJECT CONTROLS & FINANCIAL STATUS

Astaldi has submitted Cost Reports to Nalcor as required under the terms of the Agreement. The Cost Report and all associated charts, statistics and graphs can be found in Appendix K.

The Earned Value analysis shows a variance to date and a variance at completion as described in the tables below:

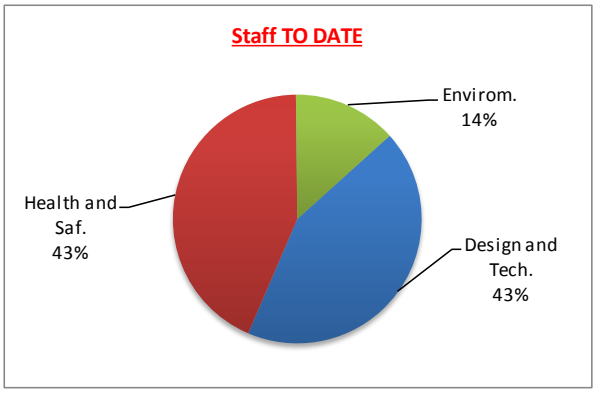

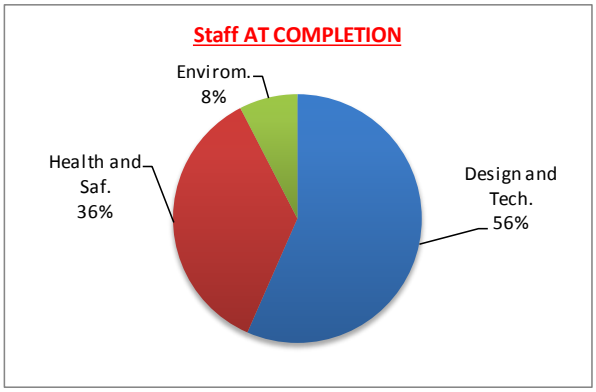

Figure 11: Staff Variance Breakdown

10.1.2. Reason for the variances

The following are the major variances that are allocated in the Health and Safety area and in the design area, as commented in the previous report:

1. Extra resources have been allocated to implement and monitor safety measures on the site.
2. Design and technical assistance have been increased. In particular:
   - Increased resources in the document control dept.
   - Electromechanical engineers were introduced.
   - Increased design of temporary work have requested additional resources.
   - Higher attention to subcontractors' drawings.

10.1.3. Opportunities for improvement

It is not possible to see in December the effect of the optimization plan mentioned in the previous report, due to the fact that it will be effective starting from January 2015.The result of the optimization plan should be visible in the next Earned Value report.

10.2. INDIRECT CRAFT

10.2.1. Variance breakdown

INDIRECT CRAFT

	TOTAL INDIRECT CRAFT	**-902,920**		**-76,833,062**

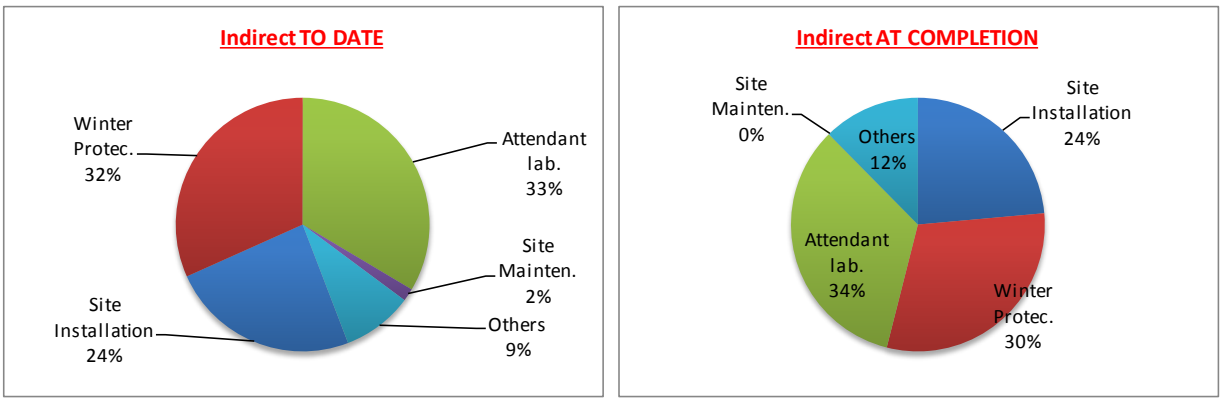

Figure 12: Indirect Craft Variance Breakdown

10.2.2. Reason for the variances

The 3 major item that generated variances are “Site Installation”, “winter protection” and “Attendant Labour”. The reasons that affected these activities have been mentioned in the previous report.

We note that for site installation the EAC is almost the same of the to-date, due to the fact that the site installation are almost completed.

For this group of items, we report an extra cost to-date of about 67M, but at completion the deviation should be about 10M CAD; this because the resource we plan to put in place will be only the budgeted resources.

For the winter protection the estimate at completion has been reduce because of the change in the strategy regarding the ICS; and also because the activity during winter will be minimized.

10.2.3. Opportunities for improvement

We repeat what has been written in the previous report that, since the end of November 2014, a strong optimization plan has been put in place. Beginning in December and especially from January, a proper allocation of resources will be done avoiding performing activities that are not strictly related with the core scope of work.

10.3. DIRECT CRAFT

10.3.1. Variance breakdown

DIRECT CRAFT

Breakdown of Variance TO DATE

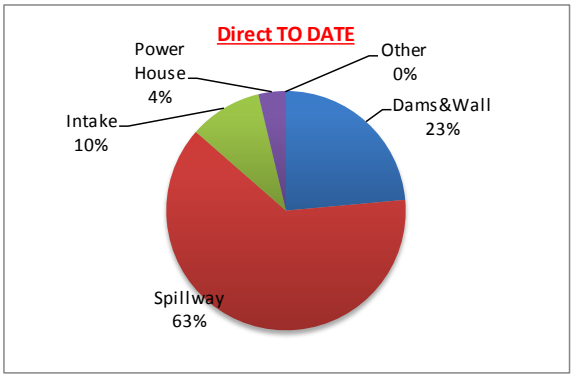
	TOTAL DIRECT CRAFT	**-343,308**		**-30,178,330**



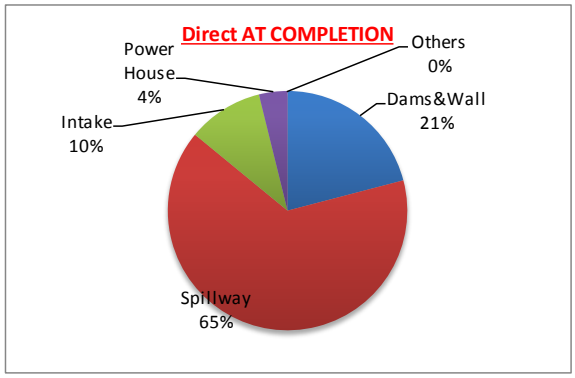


Figure 13: Direct Craft Variance Breakdown

10.3.2. Reason for the variances

For the Direct craft we have to mention again the same area of concerns as noted in the previous report, and the main reasons are listed below:

- Organizational factor
- Union factor
- Skill factor
- Climate factor
- Tender study factor

.

10.3.3. Opportunities for improvement

The optimization plan that was developed at the end of November should bring us in the right direction, thanks the strong workforce planning activities carried out during the last 3 weeks. The aim is to allocate the precise resources to avoid negative variances.

Week Ending	Number of Camp Residents
December 13	400
December 20	40
December 27	40

Highlights for the reporting period:

- Submitted sponsor remittance contributions for the period of January 1, 2014 – December 31, 2014 for staff employees into the Astaldi Manulife Pension Plan
- Conducting daily attendance through newly implemented process and monitoring to ensure efficiency.
- Planned and managed the schedule and flow of travel during the Christmas Shutdown.
- Continued work on the daily swipe process in conjunction with IT, adding new swipe machines, meetings about possible issues and solutions encountered.
- Process improvements on current standard operating procedures and processes.
- Manpower count and forecasting.
- Development of organization charts using Visio.
- Particular focus on payroll issues, improving payroll and working with the Client.
- Downsizing the workforce for the winter period.
- 1 Respectful Workplace Complaint.
- De-Mobilization for Christmas break/layoffs and planning re-mobilization in New Year.

Three Month Look Ahead:

- Engage and motivate employees through outside work activities.
- Development of organization charts using Visio.
- Having a representative from Manulife complete training sessions with staff employees regarding Astaldi's new pension plan.
- Maintain daily attendance tracking system and monitor ongoing issues to ensure accuracy and efficiency.

12. RISK MANAGEMENT

See *Appendix I – Risk Register* for detailed comments on each risk item.

The update covers the following risks:

- R-001 relates to the procurement activities. The risk level for this item has been increased and the mitigation actions are 50% complete.
- R-008 relates to the Trade skills improvement. The risk level for this item was reduced and the mitigation actions are 50% complete.
- R-020 & R-028 relates to the reliability of suppliers and subcontractors. The risk level for this item was increased. Mitigation actions for this item are 40% complete.
- R-023 relates to the communication between the construction and engineering departments. Mitigation actions for this item are 80% complete.

- R-024 relates to the turnover of personnel on site. The risk level for this item has been increased and the mitigation actions are 50% complete.
- R-025 related to climatic factors in delays. The risk level for this item has been increased and the mitigation actions are 50% complete.

A new risk has also been identified. R-029, which relates to the dismantling of the ICS and the superstructure erection.

Regarding the remaining risks:

- 11 risks have had their corrective actions completed.
- 4 risks have been closed.
- 3 risks are under Nalcor's site manager's responsibility.

Appendix B: Environmental Monthly Report

MONTHLY FUEL CONSUMPTION REPORT[1]

Contractor's Name: Astaldi Canada Inc

Report completed by (please print): Grace de Beer

Signature:

Reporting month/year (mm/yyyy): Dec-14

Report date (dd/mm/yyyy): 13/01/2015

Contract Number: CH 0007-001

Contract Name: Spillway and Power House

Consumed Fuel

Fuel Type		unit	quantity
Diesel		litres	1,082,000.60
Gasoline		litres	64,922.83
Heating oil		litres	
Propane		litres	724
aviation turbo fuel		litres	
kerosene		litres	
Other (specify type)			
1		litres	
2		litres	
3		litres	
4		litres	
5		litres	
6		litres	
Total			**1147647.43**

Notes:

1 To be completed by Contractor and submitted to the Engineer for each calendar month, no later than 7 days after end of each month.

2 Consumed fuel to be reported is defined as:

a) quantity of fuel transferred during the reporting month to tanks of all Project-dedicated vehicles, equipment, and facilities, or

b) quantity of fuel used in the reporting month as part of a process (such as ANFO used for explosives); or

c) quantity of fuel delivered to bulk storage tanks at Owner's Laydown Area within the reporting month by the Fuel Delivery Services Contractor.

3 Contractor shall provide as part of the Monthly Fuel Consumption Report a general listing of all types of equipment, facilities, and processes that have burned fuel during the reporting month. The types of equipment, facilities, and processes include, but are not limited to, the following: heavy equipment (e.g. excavators, bull dozers, concrete trucks, etc); light equipment and vehicles (e.g. pick-up trucks, chain saws, pumps); faciliites (e.g. diesel generators, concrete production, etc); processes (e.g. explosives in ANFO, etc); etc.

	Feb - 14	Mar - 14	Apr - 14	May - 14	Jun - 14	Jul - 14	Aug - 14	Sept - 14	Oct - 14	Nov - 14	Dec - 14
Propane	838	500	500	500	86	-	-	-	-	-	724

Appendix D: Planning Report

Muskrat Falls Project

Contract: CH0007

Construction of Intake and Powerhouse, Spillway and Transition Dams

Monthly Schedule Report

Reporting Period: Nov 23, 2014 to Dec 27, 2014

1 Activities Started/Completed

Concrete Volume poured during this period: **3,726 cubic meter** (including over break of SBBNB/C-19 and South Service Bay mud slabs. The short fall from the planned volume was mainly due to resources consumed for removal of snow and ice and other cold weather related winter conditions slowed down the productivity.

Spillway

Piers:

Construction work continued on u/s & d/s lifts of Spillway Piers with 8 lifts completed before Christmas break, area breakdown as below:

PIER LINE		
A	B	C
5	2	1

The primary focus will remain on "A" lifts, whereas "B" and "C" lifts will be constructed as and when time and physical resources are available. The "B" lifts were started of Pier North and South Pier and constructed 1st lift of each pier.

- Following Piers were completed:

  Pier 1: SWP1A-03

  Pier 3: SWP3A-02

  Pier 4: SWP4A-03

  Pier South: SWPSC-03, SWPSA-02, and SWPSB-01

  Pier North: SWPNA-03, SWPNB-01

- Work on following pours is in progress or will be started:

  Pier 1: SWP1A-04

  Pier 2: SWP2A-03

  Pier 3: SWP3A-03

  Pier 4: SWP4A-04

  Pier South: SWPSA-03, SWPSB-02

  Pier North: SWPNA-04, SWPNB-02

Transition Dams

South Transition Dam:

- Following Pours were completed:

  Monolith 1: STU1A-01

- Work on following pours is in progress or will be started

  None

Centre Transition Dam:

- Following Pours were completed:

  Monolith 4: CTU4A-04 (1/2)

- Work on following pours remained in progress:

  Monolith 2: CTU2A-04

Remaining work on the Central Transition Dam and South Transition Dam will be in the spring season except the monolith 1 and 2 which will be continued as and when resources and weather conditions allow for that.

Powerhouse

- Following Pours were completed:

  No major activity was performed except on going work on the ICS.

- Work on following pours is in progress or will be started

  None

Intake

Intake 1:

- Following Pours were completed:

  None

- Work on following pours is in progress or will be started

  Bottom part: The work will be started in Intake 1 bottom part I1BNB-00 after resumption of site activities and after commissioning of overhead cranes.

Intake 3:

- Following Pours were completed:

None

- Work on following pours is in progress or will be started:

  Bottom part: I3BSA-00 will be poured after resumption of site activities.

Separation Wall

- Following Pours were completed:

  Monolith 4: WLW4A-03
  Monolith 6: WLW6A-03

- Work on following pours is in progress or will be started:

  None

Remaining work on the separation wall will be in the spring season.

Draft Tube

- Following Pours were completed:

  None

- Work on following pours is in progress or will be started:

  D1BNA-00 and D1BSB-00. The construction will be started with removal of backfill and commissioning of overhead cranes after resumption of site activities.

South Service Bay

- Following Pours were completed:

  SBBNB/C-19 (Overbreak)

  SBB2B/2C (Mudslab)

- Work on following pours is in progress or will be started:

  Crane Pads: Rock cleaning for upstream and downstream shafts is being planned and construction activities will progress with completion of two crane pads, one at Unit 1 D/S (at SE corner) and second at El. +15.20m.

  South Service Bay D/S: SBB1B-00 will be casted after cleaning of ice and snow from the area and completion of 1st crane pad. The remaining work will continue with 2nd crane pad.

  South Service Bay U/S: SBB1A-00 will be casted after cleaning of ice and snow from the area.

Integrated Cover Structure - ICS

- Progress of Phase 1 & 2 (Line 0.1 – Line 12/13)

  Total Structural Steel: 1578T (Ton)

  Structural Steel Completed: **100%**

  Cladding Completed (modified scope): **100%**

  Decking Completed: **100%**

  Overhead Cranes: All 7 Cranes are installed and will be commissioned in coming weeks.

ICS construction for Unit 1 and 2 is completed with some modifications and further heating and hording for each individual pour inside ICS will be completed to ensure temperature control.

1.1 Schedule Performance Index:

Area	Nov SPI	Dec SPI	Change	Notes
Spillway (2)	0.42	0.38	-0.04	
Dams (3)	0.32	0.29	-0.03	
Powerhouse (1)	0	0	0	
Intake	0.38	0.21	-0.17	
Project Total	**0.36**	0.29	**-0.07**	

Notes:
SPI is based on Primavera P6 schedule and is calculated from man-hours earned vs. planned.

(1) Includes Draft Tube, Tailrace, South Service Bay and North Service Bay

(2) Includes Retaining Wall and Discharge Channel

(3) Includes South Transition Dam, Centre Transition, Separation wall and North Transition Dam

SPI calculations commenced the date baseline schedule accepted by NALCOR

1.2 Spillway Skyline:

	Pier South			Pier 1			Pier 2			Pier 3			Pier 4			Pier North		

1.3 Status & Mitigation/ Acceleration

1.4.1 Spillway:

- Primary focus is on the upstream piers.
- Delay in the preparation and concreting of subsequent pier lifts of South Pier “A” is being observed due to over break concrete and hence the heating and hording arrangements. This delay will eventually cause delay in completion of “B” pours of the Pier.
- Maximum available resources are being placed in Spillway “A” lifts execution to achieve milestone M4A.
- One remediation solution that will minimize the impact on the project will be to focus only on the A pours and make the B pours attached the M4B milestone instead of the M4A one. So Andritz might access when we finish the piers on the A side and the bridge.

1.4.2 Transition Dams:

- At Centre Transition Dam focus will be on Monolith 1 and 2 as and when resources become available from other areas especially after completion of spillway Piers for milestone M4A. Monolith 4 will be stopped and pushed to be performed under no winter conditions since it is not critical.

- At South Transition Dam, work will be stopped on monolith 1 and 2 since they are not critical to be performed under winter conditions.
- At North Transition Dam, rock cleaning is started and construction would not progress actively till the completion of North Pier B Pours till lift 3.

1.4.3 South Service Bay:

- Work is stopped on Slab on Rock pours and will progress intermittently.
- Crane pads construction will start after resumption of site activities and is very critical for construction of two elevator shafts.
- Primary focus will be on construction of U/S and D/S elevator shafts.
- This activity is very critical for the sequential completion of the SSB, Draft Tube and Powerhouse.

1.4.4 Intake:

- The work at Intake 3 was stopped due to cold weather conditions and its pouring will be completed after cleaning of snow. The remaining work will resume in spring.
- Intake 1 bottom part will be started once the overhead cranes are commissioned.

1.4.5 Draft Tube:

- Construction will be started in U/S and D/S portion provided removal of backfill and commissioning of overhead cranes is completed.

1.4.6 Separation Wall:

All the work on the separation wall will stop except the pours in progress, and will be performed under no winter conditions.

2 Critical and Key Activities

2.1 Spillway

2.1.1 Last Month Key Activities

✓ Completed 8 Lifts. 5 As, 2Bs and 1C

2.1.2 Next Month Key Activities

- Continue Pours of North, South and Pier 1 thru 4 with primary focus on Upstream Pours.
- Pouring of the B pours on the north and south piers to allow construction of monolith 1 of CTD and the NTD to start.

2.2 Transition Dams and North Service Bay

2.2.1 Last Month Key Activities

✓ Poured CTU4A-04 (1/2)

✓ Completed STU1A-01

2.2.2 Next Month Key Activities

 No activity as these are not critical to be completed in winter months.

2.3 Intake, Powerhouse, South Service Bay and Draft Tube

2.3.1 Last Month Key Activities

✓ Draft Tube F/Work delivery

✓ Completion of ICS Unit 1 & 2 with some modifications

2.3.2 Next Month Key Activities

 Completion of Crane Pads for mobile crane setup for SSB Shafts construction

 Start of SSB upstream and downstream Shafts

 Start and progress on Intake 1 and Draft Tube 1

 Complete construction of Intake 3 pour in progress

2.4 Separation Walls

2.4.1 Last Month Key Activities

✓ Continued progress in all Monoliths and completed 2 lifts

2.4.2 Next Month Key Activities

 No activity is planned and work will resume in spring

3 Discussions

3.1 Potential Issues

3.1.1 Human Resources

Description of difficulty	Difficulty to recruit workers (mostly carpenters and Iron Workers) qualified and experienced to perform the type of work required by the project.
Possible causes	Lack of skilled and experienced tradesmen provided by the local union. Union local doesn't have a sufficient number of qualified workers for the project.
Potential impacts	Expected productivity of tradesmen takes longer or is difficult to meet. Difficulties to recruit qualified workers outside of the local union in Newfoundland and Labrador. Difficulties with union to bring qualified workers from outside of the province. Overall cost and schedule impacts on the project. Need additional people to meet schedule and production requirements. Safety issues due to lack of workers' experience

3.1.2 Engineering

Description of difficulty	Completion and approval of Engineering specially reinforcement drawings for Intake 1, u/s & d/s elevator shafts, Draft Tube 1.
Possible causes	Engineering issues and approval of drawings needs to be expedited specially in above noted areas. Better progress and coordination are taking place now.

Potential impacts	Intake 1: Late start in Intake 1 may cause further delay in the execution and completion of Intake 1 and may push milestone M28 interfaced with Mechanical Works. South Service Bay u/s and d/s shafts: These are critical for execution of Powerhouse area Intake 1, Draft Tube 1 and Tailrace 1. All the technical issues related to these required to be resolved and outstanding drawings finalized as soon as possible.

3.1.3 Procurement

Description of difficulty	Procurement of Major and Misc. Structural Steel for powerhouse, piping packages for powerhouse and elevator shafts, steel packages for the upstream and downstream bridges for the spillway, ICS heating, services, electrical work for the crane, temporary lateral supports for the spillway, Grouting package, equipment purchasing, tests and method statements and their final approval.
Possible causes	Delay in identification of Procurement Packages, issuance of POs and initial/final deliveries.
Potential impacts	Construction delays of critical activities in all above noted critical areas. Due to extreme weather conditions, there are limited areas available for execution during to winter months. If procurement of any of above noted packages is delayed, a major time loss will occur in the powerhouse and spillway areas where most of the critical work is planned to be completed under conditions.

3.1.4 Construction

Description of difficulty	Construction of Spillway Piers and milestone M4 Start construction of Draft Tube, Intake 1 and SSB shafts
Possible causes	Extreme weather conditions, heating & hording Rock profile on Pier South U/S Late construction of crane pads Late Start of Intake 1, Draft Tube 1 and SSB shafts Low productivity on the spillway piers. Late completion of ICS Unit 1 & 2.

Potential impacts	Rock Reconstruction: Due to substantial winter rock reconstruction at South Pier on U/S side, pouring of lifts is being delayed. Integrated Cover Systems: Delays in completion of ICS I & 2 caused delays in execution start of Draft Tube, Intake.

3.1.5 Integrated Cover System

Description of difficulty	Completion of ICS till line 12/13. (Unit 1 & 2) with power distribution schemes, heating and Lighting arrangements for the structure.
Possible causes	Low Manpower profile, Installation of Overhead Cranes, Late delivery of Structural Steel Components and Erection. Winter delays
Potential impacts	The purpose of this major component was to facilitate construction of major project components during the winter period of 2014/2015. The timely completion of ICS was very critical for the construction activities to be carried out in the areas of Powerhouse, Draft Tube, Intake and South Service Bay during winter months to avoid further delays for key milestone achievements for CH0031 & CH0032 interface. In addition to that, its late completion will also result in the interference with adjacent construction activities in future.

4 Multiple Float Path Analysis

A detailed multiple float paths are run and their brief outline is presented below. More details can be found in attachment 6.7

4.1 Milestone M4A

M4A require all the A pours and all the B pours of the Spillway to be completed by 15 February 2015. Here below is the analysis of multiple Float Paths for M4A.

1. The A line pours are most critical for substantial completion of Milestone. In 3 different analysis, it passes through South Pier, Pier 1 and Pier 2 as per current schedule.

4.2 Milestone M4B

M4B requires all the C pours with the Spillway bridges and North Dam and the Monolith 1 and 2 of the Central Transition Dam to be constructed by 31 July 2015.

1. The main critical path passes by the central Dam driven by the South pier pours A and B.
2. The second critical path is through the North transition Dam driven by the north pier B line pours.

4.3 Milestone M18

M18A and M18B require completion of South Service Bay and Mezzanine to start Hydro Works by July 31, 2015.

1. The SSB U/S and D/S shaft leading to elevation 6.5 is critical allowing the construction of Unit 1 of Intake and Draft Tube, and then further up to El 15 to allow for steel structure to take place

4.4 Milestone M26

M26 require completion of Powerhouse Unit 1 with Mezzanines by 30 September 2015. The delay in its completion is greatly contributed by delay in the erection of ICS Bay and bay 2.

1. Activities driving milestones in this analysis is the commissioning of overhead cranes, Unit 1 foundation preparation and backfill removal, then the draft tube slabs then the tailrace piers leading to the ICS dismantling then the structure steel erection.
2. In another analysis, SSB U/S shaft is driving Intake 1 pours to El 15.5 before ICS dismantling operations and resuming back after.

4.5 Milestone M28

M28 requires completion of Intake 1 by 31 March 2016

1. From these analysis it appears that the main drive to M28 are the same activities driving M26
2. Mainly the ICS enclosure, then the foundation preparation and backfill removal, then the draft tube slabs then the tailrace piers leading to the ICS dismantling then resuming the pours in the intake side.
3. In another analysis, SSB U/S shaft is driving Intake 1 pours to El 15.5 before ICS dismantling operations and resuming back after.

4.6 All Sites / General

1. The schedule has been actualized and is updated with current progress with Data Date Dec 28, 2014.

2. Hard constraints are put to push the south transition dam to the summer on the:
   -*STD.M2.STU2A02-03, SOUTH TRANSITION DAM, and LIFT STU2A-02 – Construct*

3. The Constraints are put as well on Monolith 3 and 4 of the central dam for the same reasons:

   -CTD.M3.CTU3A03-03- CENTER TRANSITION DAM: LIFT CTU3A-03 – Construct
   -CTD.M4.CTU4A06-03- CENTER TRANSITION DAM: LIFT CTU4A-06 – Construct

4. The Constraints are put on Intake 3 & 4 Bottom part and Draft Tube 3 & 4 (U/S & D/S part) to start in summer.

5 Potential Changes to Project Schedule

- Adjustment to the construction completions after completion of ICS
- Adjustment of the draft tube pours arrangement.

2022	0	Site Query - SQY-CH00007001-045. Rock Reconstruction Concrete. Following the answer we received on 22.May.2014. Major reconstruction of the rock to the right of lift XXX, disrupt the normal sequence of our work. This non-predictable work such as the installation of anchor rods with injection,formwork, additional details and repeat cleaning surfaces have an impact on the schedule and additional costs.					Non-Labour Component Already Compensated. Labour component estimated to be $ 1.65M yet to be submitted. Time impact still to be established in the range of 5 to 10 days

CON-CH0007-0054	0	Leveling Slab	Astaldi request to pour the leveling slab intake 1, 2, and 4 using the approved A2-5.1 mix design. The following condition requested by Nalcor in the concession request CDN-CH0007-040 will be fullfilled: 1.) Contractor will be responsible to replace any material that does not meet the specified requirements. 2.) Foundaton preparation shall be done as per technical specifications and ITP. 3.) Leveling slab minimum thickness shall be 200 mm but can taper shallower areas. 4.) Infill overbreak area is permitted only up to maximum of design delevation. 5.) Concrete surface preparation is required before next pour (green-cutting). 6.) No additional waterstops required but vertical waterstops must be of the required distance into the rock (ie., completely in the concrete). 7.) Contractor will follow joint alignment between units.	18.09.2014	20.09.2014	Approved Conditional

SIN-CH0007-004	0	Dam Construction	Site Instruction to Instruct Astaldi to use Borrow Source indicated on the attached drawing MFA-SN-CD-4300-CV-PL-0007-01 Rev. C7 to check Dam Construction	9-May-14	Work Clarification			
SIN-CH0007-005	0	Over-break Concrete From Rock Blasting Activity	Permitted to partially infill portions of the deeper voids that are present in the spillway slab foundation.	13-May-14	Work Clarification	X		
SIN-CH0007-006	0	Over-break Concrete From Rock Blasting Activity	Use of Trial Mix 30420B3-3 for Overbreak Concrete	4-Jun-14	Work Clarification	X		
SIN-CH0007-007	0	Loose Rock Blocks on the Foundation of Centre Tranition Dam	Contractor Shall Remove Loose Rock Blocks on the Foundation of Centre Tranition Dam as Marked on the Field By Paint Marks and as Shown on the Attached Photographs	28-Jun-14		X		
SIN-CH0007-008	0	Application of Dry Pack on Rock Surfaces And Over Open Joints	The Contractor shall apply dry pack on the rock surfaces and over the open joints of Centre Transition Dam lift CTU2A-01 marked by paint and identified with marking "DP"	23-Jul-14				
SIN-CH0007-009	0	Loose Rock Blocks - Excavation, Scaling, Washing and Cleaning	Loose rock blocks marked in red in the enclosed photographs are to be excavated and scaled at the foundation bedrock area of Centre Transition Dam	1-Aug-14		X		
SIN-CH0007-010	1	Contractor Is Instructed To Hold On Construction Of Blocks STU3 On South Transition Dam. Company Will Be Issuing ECN To Make Modifications To Concrete Outlines & Reinforcement Details.	Contractor Is Permitted To Proceed On Construction Of Block STU2	22-Aug-14		X		
SIN-CH0007-011	0	For The Purposes Of Determining Delays For Removal Of Formwork; Spillway Base Slabs SW1A; SWB1B; SWB1C; SWB2A; SWB2B; SWB2C; SWB3A; SWB3B; & SWB3C Shall Be Considered As Vertical Surfaces Of Thick Cross Sections.	As Per Point # 5 Above, In All Cases, The Removal Of Formwork & Falsework Shall Be Authorised By The Engineer	24-Aug-14				

SIN-CH0007-012	0	Specification Section: 03 11 00 - Concrete Formwork states: 2.4 FORMWORK LINER 1. Unless indicated otherwise on the drawings, formwork shall be covered with a formwork liner type Drainaform as manufactured by Texel Inc or approved equivalent, between elevations 37.50m and 40.00m for all upstream surfaces, including the bulkhead and intake gate shafts, and between elevations 0.50m and 7.00m for all downstream surfaces. The formwork liner is only required where the surface is normally in contact with water in the reservoir, tailrace and discharge channels. The formwork liner shall be installed as per the manufacturer's recommendations	As discussed with Astaldi Engineering on 09.September.2014 in accordance with this Specification, Contractor is advised that the vertical formwork at the spillway piers downstream of the final rollway surface require the Drainaform liner installed from the elevation of the top of the base slab to elevation 7.0m. This will include the forms currently being set for the piers on top of SWB3C	10-Sep-14				
SIN-CH0007-013	0	This Site Instruction supplements SIN-CH0007001-0009 dated 01.AUGUST.2014. The open joints at the foundation bedrock of Centre Transition Dam footprint CTU4A-02 area shall be embedded with at least five rigid PVC conduit pipes of nominal size 63mm [2.5"] for in fill / contact grouting later after the placement of cast in placeconcrete up to EL=18.50m. The collar of the PVC pipes should be capped and stick up at least 1 Foot / 0.3048 m above EL	This SIN is only to cover the authorisation given to Contractors worker to place the PVC pipe as the concrete pour was underway. FWO # 012 will be issued to cover the additional costs. The open spaces of the joints are to be filled with grout after the placement of dental concrete since the dental concrete is not adequate enough to fill the narrow cracks at the foundation	12-Sep-14				
SIN-CH0007-014	0	This Site Instruction supplements SIN-CH0007001-0013 [Rev 01] dated 12.September.2014. The current field instruction illustrates the steps to fill the residual voids which may remain between the concrete and the open joints at the foundation bedrock of Centre Transition Dam Footprint CTU4A-02. Infill / contact grouting shall be carried out through the 4 rigid PVC conduit pipe sleeves [refer enclosed photograph, nominal size 63mm / 2.5"] embedded in concrete pour CTU4A - 02 up to EL +18.50m. The process of grouting shall be performed in the following steps:	1. The pipes / open joints shall be cleaned of any rock particles, cement or any other solid materials by injecting water under pressure. If it is found that it can not be cleaned with water only under pressure even after a reasonable length of time, it shall be washed with alternating jets of air and water under pressure, injected through a hose or a pipe lowered to the bottom of the pipes. Air pressure should be gradually increased to a maximum of 100psi. Flushing should be continued until the return water is clear. 2. As soon as the cleaning is completed, the open joints are to be injected with grout by gravity using a hand pump with a pressure of approximately 40kPa via the PVC conduit pipes. Injection of the grout should start from the bottom of the PVC conduit using an injection line. During grouting adjacent conduit pipes shall be plugged by suitable caps to prevent grout from flowing out of the PVC conduits. On completion of the grouting, the PVC conduit pipes should be full of hardened grout as far as the orifice up to EL +18.50. The working areas and concrete surfaces must be protected and cleaned immediately from any leak out of grouting materials during and after the grouting operation. Approved SikaGrout 212 mix shall be used for the grouting.	29-Sep-14				

SIN-CH0007-015	0	This refers to the Scope Of Work Of Technical Specification Section 03.60.00 - "Drilling, Grouting, Rock Dowels & Drainage." Temperature Sensors [Thermistors] and Uplift Gauges have to be installed prior to curtain grouting activities as per the Technical Specification MFA-SN-CD-3300-CV-TS-0001-11 [Section 03 60 00 - "DRilling, Grouting, Rock Dowels and Drainage." Temperature Sensors [Thermistors] and Uplift Gauges have to be installed prior to curtain grouting activities as per the Technical Specification MFA-SN-CD-3300-CV-TS-0001-11 [Section 03 60 00] Aconex Site Queries SQY-CH0007001-0088 dated 06.September .2014 and #SQY-0007001-0102 dated 27.September.2014 should also be referred to in this regard.	To monitor the temperature of the rock foundation with the help of Thermistors before grouting and to monitor the rock surface movements during water pressure testing or grouting operations	30-Oct-14

Appendix I: Risk Register

LOWER CHURCHILL PROJECT	LCP - CONTRACTORS / SUPPLIERS RISK REGISTER	Page:	01 of 01
	Agreement No.: CH007-001	Date: 11 Dec. 2014	in red the updated parts
	Agreement Title: Construction of Intake and Powerhouse, Spillway and Transition Dams	Risk Register No.: 002	

Mitigation Strategy:
1. Mitigate
2. Avoid
3. Transfer
4. Accept

Risk ID	Exposure Activity	Exposure Status	Risk Title / Possible Outcome	Risk Description	Risk Type	Attributes		Risk Status	Risk Exposure Period		Pre Mitigation			Risk Approach	Risk Approach Strategy descr.	Strategy Status	Action	Action Status	Responsible	Due Date	Action % complete	Comments
						Carrier	Location		Start	End	Probability	Consequence	Probable Consequence / Risk Level									
R-001	Procurement	Open	List of packages and availability	List and availability of clearly defined packages, absence of these packages could delay the project activities	Schedule	Procurement Manager/Cheief Engineer	Procurement and Engineering Office	Open	Dec-13	Sep-18	50%	High	12	Mitigation	Have close and overall control of work packages and activity plans	Open	- Hold coordination meetings between planning/procurement/engineering.	Open	Chief Engineer/Procurement Manager	Sep-14	25%	
R-002	Construction	Open	Rock aggregates production/Lack of material (rock) availability for entire project	Due to wastage in the stockpile (material quality), amount of material present may not be sufficient for the entir project, could result in schedule delays and cost impacts.	Schedule	Nalcor site manager/Astaldi Project Manager	C-1	Open	Sep-15	Sep-18	50%	High	12	Mitigation	Create plans to improve quality of aggregate production and have a better understanding of the aggregate needs of the project.	Open	-Optimize the exploitation and crusher activities (to reduce losses) - Verify the quantity needed	Open	Planning/Construction	Sep-14	100%	The actual stock pile aggregates support concrete production until May 2015
R-003	Construction	Open	2nd stage concrete and river diversion	The lack of finalization of second stage concrete phases, could impede river diversion.	Schedule	Nalcor site manager	Site	Open	Sep-15	Oct-16	30%	High	12	Mitigation	Ensure communication channels to accelerate the process.	Open	LCP drafting letter to formally notify Contractor regarding 2nd stage concrete	Open	Nalcor	Feb-15	tbd	
R-004	Construction	Open	Deliverable Submittal and Acceptance Process.	The long procedures in the approval process of drawings, could cause delays in the construction activities that cannot start without this approval.	Schedule	Astaldi Chief Engineer/Nalcor Chief Engineer	Engineering Office	Open	Sep-14	Sep-18	40%	High	12	Mitigation	Create a tracking plan to ensure deadline are met. Reduce the transmission time and improve direct communication with the designer	Open	Track and develop a follow up on the transmission and approval processes. Have the designer at site. Plans to submit deliverables with enough time in advance of the work.This period should include time for deliverable revision and resubmission in 14 days in accordance with sec. 6.4.4 of Exhibit 11. identification of critical deliverbles and communication protocol with Company to prioritize deliverble review. Robust drawing checking system to ensure drawings are submitted with minimal errors.	Open	Astaldi Chief Engineer/Nalcor Chief Engineer	Sep-14	70%	Company has taken specific measures to assist Contractor with its shop drawings (ref. LTR-0294) Speed up approval process is need - the approval time should be reduced from 21 to 11 days
R-005	Construction	Open	Time sheet approval	The delay in the Time sheet approval can bring delays in the payments, this coud affect the financial status of th project that is connected with the overall operational project activities.	Schedule	Astaldi QS Manager/Nalcor Project Controls site manager	QS Office	Open	Sep-14	Sep-18	75%	Very High	25	Mitigation	Clarify processes involved to have a common understanding of the needs of both parties	Open	Develop a common and agreed procedure for a fast data time sheet approval process.	Open	Astaldi QS Manager/Nalcor Project Controls site manager	Sep-14	100%	
R-006	Construction	Open	Delay on the ICS construction activity	The construction phases of the ICS could be delayed due to operational conditions/weather conditions	Schedule	ICS Construction Manager	Powerhouse	Open	Oct-14	Mar-15	80%	Very High	25	Mitigation	Keep close control of scheduled activities, monitoring any small delays	Open	Develop a detailed control plan Increase the number of resources on site and improve the daily activities control.	Open	ICS Construction Manager	Sep-14	100%	The plan has been developed. The delay has been caused for the type of cladding, that was difficult to install due to the strong wind conditions. A new system has been put in place to accelerate the clousure (INSULATED TARPS)
R-007	Construction	Open	Winterization readiness/Delay in the installation and supply of the heating system in various facilities	The delay in the supply of the heating system could prevent the work activities from occuring within the various facilities. In connection, the construction activites will also be delayed.	Schedule	Procurement Manager	All Facilities	Open	Nov-14	Mar-15	50%	Very High	15	Mitigation	Ensure the purchase order are put into place in due time	Open	Develop an action plan for tracking and enhance communication with subcontractor to avoid project delays.	Open	Procurement Manager/Technical Manager (Mechanical and Electrical)	Sep-14	45%	The delay in the ICS Stage 1 Winterization is in delay because the structure installation is in delay
R-008	Construction	Open	Trades skill	The skill level of employees/workers must be adequate in order to properly perform project activities, lack of a proper level of skill can result in delays/re-work/lower then anticipated production rates.	Quality/Schedule	HR Manager/Labour Relations Manager	Overall activities	Open	Sep-14	Dec-16	55%	Very high	20	Mitigation	The strategy is to reduce the low level skills employee and to raise the quality of the works and the speed of the project	Open	-Deep screen of the skills of the employee during the hiring process -Periodic meeting with Union representatives	Open	HR Manager/Labour Rel. Manager	Sep-14	20%	
R-009	Construction	CLOSE	Delay in the Baseline approval	The delay in the baseline approval process would prevent the planning staff from perform an accurate overall schedule control	Quality	Nalcor/Astaldi lead planner	Planning office	CLOSE	Sep-14	Dec-14	25%	medium	6	Mitigation	The strategy is to improve the frequency of meetings between Nalcor and Astaldi planners and see how can CH-0007 plan is included in the LCP Master Plan	CLOSE	Define a meeting plan that will fit project needs.	Closed	Nalcor/Astaldi lead planner	Sep-14	100%	
R-010	Procurement	Open	Delay of procurement relating to ICS overhead crane.	The delay in the reception of the overhead crane on site, will delay the construction activities with the ICS structure.	Schedule	Procurement Manager	Procurement Office	CLOSE	Sep-14	Dec-14	25%	Very High	10	Mitigation	The strategy is to reduce the chance of delays related to reception of overhead crane.	CLOSE	Develop a plan to have a close control of manufacturer and shipping activitites	Closed	Procurement Manager	Sep-14	100%	Cranes at site
R-011	Construction	Open	Permitting/occupancy permits for site buildings	Design is still under process. While the impacts may be small we still have out standing bldg permits for fire/life and occupancy	Schedule	Astaldi Env. Manager	Astaldi	Active	started		15%	medium	6	Mitigation	Action to reduce the probability of non compliance	Open	Follow up with survey and engineering.	Open	Astaldi Env. Manager	Sep-14	80%	
R-013	Construction	Open	Dewatering of Powerhouse and Spillway/Environmental, pH, tss and hydrocarbons in the discharge water	Contaminated Discharge water. Non compliance issues in terms of environmental regulations can delay the project activities. should put in place specific procedures and/or reorganize the activities in compliance with the regulations. NLDOEC, NLWRMD, DFO	Schedule	Astaldi Env. Manager	Project Management, Construction and Site Safety	Active	Jul-13	Jul-16	85%	High	20	Transfer	A contingency for additional management, audits and external consultants is added herewith for proposal purpose.	Active	quarterly, Monthly, weekly or spill event sampling event of discharge water	Open	Project Management, Construction	Apr-13	100%	weekly/monthly/quarterly due diligence in place
R-014	Construction	Open	Washing of concrete truck drums/Delay in Schedule	increase the TSS and pH in water discharging from the SP/PH Potential	Schedule	Astaldi Env. Manager	Project Management & Human Resources	Active	Jul-13	Jul-16	85%	High	20	Mitigation	Put in place facilities to reduce water contamination.	Active	washout ponds for concrete trucks and waste concrete	Open	Project Management & site services	Apr-14	50%	
R-015	Construction	Open	Hazardous waste/spills and disposal issues	disposal of large amounts of avoidable waste generated form our operations. Lube cans, buckets , waste oil, lubes, gas, etc..	Schedule	Astaldi Env. Manager	Project Management, Astaldi Corporate and Construction	Active	Jul-13	Jul-16	85%	High	20	Mitigation	Put in place controlling procedures for hazardous waste	Active	Create a plan to monitor/control/dispose hazardous waste materials.	Open	Astaldi Project Management	Apr-14	100%	Plan done and approved
R-016	Construction	Open	excessive run off causing tss and other contaminates to enter the Churchill river from our activities	DFO, NLDOEC and NLWRMD infractions no complainant with financially implications	Schedule	Astaldi Env. Manager	Construction and Procurment	Active	Jul-13	Jul-16	85%	High	20	Mitigation	Create approaches, procedures and plans to control run off	Active	Enhance a proactive approach to run-off issues. Setup proper procedures and plans that can mitigate and minimize impacts on the environment.	Open	Project Management	Apr-14	100%	
R-017	ICS Construction/Design Phases	Open	ICS Construction Design phase/Errors in structural calculations	Failure in structural elements that may cause delay and safety issues.	Schedule/Quality	Chief engineer/ICS construction manager	Powerhouse	Active	Sep-14	Mar-15	5%	Very High	5	Transfer	Transfer to third party	CLOSE	Stipulate a CAR (construction all risk insurance)	Closed	CFO	Dec-13	100%	
R-018	ICS Construction/Design Phases	Open	ICS Construction Design phase/No compliance with specifications and drawings	Rework would be necessary to be in compliance with specifications and drawings.	Quality/Schedule	Quality Manager	Construction Site	Open	Sep-14	Mar-15	20%	Medium	6	Mitigation	Mitigation	CLOSE	Develop and follow ITP	Closed	Quality Manager	1 month prior to each activity	100%	Design approved.
R-019	Testing of Material	Open	Quality control for Material testing	Uncorrect results in the testing of materials would not allow for proper evaluation of workdone.	Quality	Quality Manager	Site Testing Location	Active	Sep-14	Sep-18	25%	Medium	6	Mitigation	Enhance the consciousness and skills of workers when performing material tests.	Open	- Develop procedures to test materials - Use of skilled personnel -Ensure timely test result data	Open	Quality Manager	Ongoing	Ongoing	
R-020	Procurement	Open	Reliability of suppliers and subcontractors	Having bad performance from subcontractors resulting in low quality of materials and delays in delivery.	Schedule/Quality	Procurement Manager/Cheief Engineer	Procurement and Engineering Office	Active	Dec-13	Sep-18	25%	Medium	6	Mitigation	Get a deep understanding of the technical ability of the supplier/subcontractor	Open	- Request clear technical requirements - Impose quality program - Perform audits	Open	Quality Manager/Procurement Manager	Ongoing	Ongoing	
R-021	Engineering	Open	Unexpected delays during the drawing review phase/Design Issues/Disputes - delay in schedule.	Change and definition in design is still under process. While the impacts may be small, in the aggregate they may delay and cause signifiicant issues downstream.	Schedule	Nalcor site manager	Nalcor Design office	Active	Jul-13	Jul-15	60%	High	16	Mitigation	Plan the construction and design activities	Open	Monthly Follow Up with Engineering and Construction	Open	Astaldi Chief Engineer/Nalcor Chief Engineer	Sep-14	tbd	Need to speed up the Power House drawings approval
R-022	Construction	Open	Changes in Design Conditions/Review Process - delay in Schedule	Reviews increased from 25% to 50%.Which agencies and the review time for those agencies is not defined. The time required by the Engineer to review submittals (shop drawings, test certificates, manuals, plans, concrete pours layouts, etc.) is also not specified. It is expected that more than 4000 deliverables will be needed to be submitted to the Engineer as part of the project execution and before any work may be performed on site. This is a very critical effort that may impact the project execution of Astaldi.	Schedule	Nalcor	Design Team	Active	Sep-14	Dec-16	70%	High	20	Transfer	Contingency for shop drawing review has to be set up by the carrier.	Active	Monthly Follow Up with Engineering and Construction	Open	Nalcor Chief Engineer	Sep-14	tbd	Projects q.ties are arising from detail design
R-023	Engineering	Open	Construction Issues with the Design /Improper Construction / Faulty Design	With the increase in design deliverables, there is a probability that poor communication bewteen Construction and Engineering creates a delay in the project.	Schedule	Astaldi PMO/Construction Manager	Construction and Design Team Offices	Active	Sep-14	Dec-16	25%	High	8	Mitigation	Improve communication system among contractors	Active	Setup a common log of transmission drawings (in/out) from engineering to construction and vice-versa. Define and implement propper coordination	Open	Astaldi PMO/Construction Manager	Sep-14	70%	Trasmission log in place. Enginnering joins the weekly planning/construction meeting
R-024	Construction	Open	Inefficient Personnel Turnover/Potential Delay in Schedule	Inefficient Personnel Turnover. It is expected that the project will have a very high turnover for all construction personnel. (project management & local staff).	Schedule	Astaldi PM/HR Manager	All Site Areas	Active	Sep-14	Dec-16	70%	Very High	25	Mitigation	Ensure transfer of knowledge between employees in the same department for all work activities to avoid learning curve lost time and disruption of work activities	Active	All the inneficient resources will be removed.	Open	Project Management & Human Resources	Sep-14	40%	Action in place, on going; A selection of efficient resources is on going.
R-025	Construction	Open	Climatic Factors - Delay in Schedule	Access from Montreal to Goose Bay may be closed during winter. Alternatives routes will need to be utilized to ensure that materials arrive continuously to site without delaying the execution of the works.	Schedule	Logistics Manager/Procurement Manager	Roads between starting point and goose bay	Active	Nov-14	Apr-15	85%	Very High	25	Mitigation	Look for alternate transportion routes to overcome obstacles related to transportation of materials Increase stock of programmable goods and materials (food/fuel/cement/steel)	Active	Define the plan of alternatice route and ensure feasability of alternative option	Open	Logistics Manager/Procurement Manager	Sep-14	35%	Fuel stock in place (Fuel stocked in GB)
R-026	Construction	Open	Conflicts with Local Stakeholders	Goose Bay/Happy Valley is a very small community and the project will be seen by locals and authorities. If the project and related activities are seen to contribute to the local area and the Innu Nation, it will be beneficial for all. The risk is that it could not be and so have the community that will be against the project.	Schedule	Astaldi PM	Goose Bay Community/Overall Site	Active	Sep-13	Jul-16	30%	medium	9	Mitigation	Contract provisions on local recruitment (Provincial Benefits); active recruiting system local oriented; active procurement system local oriented;	Active	Monthly Follow Up with Project Management and Construction. Astaldi Corporate on a quarterly basis. Goose bay office for Local community Community investment Timely payment to sucon and suppliers	Open	Astaldi PM	Sep-14	60%	Ammount for local investment approved. GB office open to the local community for hiring and procurement Paymnent on time
R-027	Engineering/Construction	Open	Multiples Contractors Interface	The presence in the Power House of more than one Contractors, could cause delay on the activites	Schedule	Nalcor Construction Coordinator	Powerhouse	Active	Jul-15	Sep-18	40%	High	12	Mitigation	Coordination	Active	Coordination between Contractors. Held coordination meetings, sharing programms and targets.	Open	Nalcor Site Manager/Contractors PMs	May-15	0%	
R-028	Construction	Open	Embedded parts	Delay in supplying first stage embedded parts (permanent materials) into powerhouse concrete lifts	Schedule	Astaldi Chief Engineer/Astaldi CM	Powerhouse	Active	Jan-15	Apr-17	50%	Very High	20	Mitigation	Control and follow up	Active	Develop a close procurement control and a precise material list.	Open	Astaldi Chief Engineer/Astaldi Procurement Manager	Dec-14	20%	

General description of the Risk Register's fields:

01	Risk ID	Unique number assigned to the risk. E.g. 0001; R0001,
02	Exposure Activity	Activity related with the scope of work and specific timeframe e.g. Civil Works: Clearing, Grubbing, Earthworks, Hauling, Dumping; Slopes - Transmission Lines: Access; Foundations; Towers; Conductor. Also it can be defined by discipline following agreement scope of work.
03	Exposure Status	Open; Close
04	Risk Title / Possible Outcome	Title describing the Risk of possible outcome identified
05	Risk Description	Description of the cause and effects associated with the identified risk.
06	Risk Type	Suppliers: Schedule and Quality Contractors: Schedule, Quality, Safety and Environment. If the agreement includes a reimbursable pay item with a considerable participation in the total agreement price a risk type "Cost" must be included.
07	Carrier	Best knowledgeable person identified to mitigate the risk.
08	Location	Additional info indicating the location associated with the identified risk. E.g. physical component; geographical location; facility location or WBS if applicable
09	Risk Status	Active, Retired, Proposed
10	Risk Exposure Period (Start - end)	Start and end dates for the exposure period associated with the identified risk. If possible should be aligned with the baseline schedule implemented to monitor, track and report progress of the scope of work
11	Probability	Numerical value expressed in percentage identified for the risk. If the percentage is equal or over 90% it is not considered a risk. It should be treated as an Issue and response should be implemented. Issues are not part of this register
12	Consequence	Qualitative Assessment of the consequence. E.g. very low, low, medium, high and very high.
13	Probable Consequence / Risk Level	Qualitative Assessment as a result of : Probability * Consequence. It needs to be aligned with the Risk Matrix - Heat Matrix implemented to identify the risk level.
14	Risk Approach	1)Avoid,2) Mitigate, 3)Transfer or 4)Accept
15	Risk Approach Strategy desc.	Description of the Mitigation or mitigations identified for the risk following decision on the mitigation strategy. The relationship between Risk and Mitigation is one to many.
16	Strategy Status	Open; Close and Cancelled.
17	Action	Description of the specific action or actions associated with the identified mitigation. The relationship between Mitigation and Action is one to many.
18	Action Status	Open, Close and Cancelled.
19	Responsible	Person identified to carry-out action or actions
20	Due date	Date identified to carry-out action or actions
21	Action % complete	New date identified to carry-out action or actions as a result of a failure to complete action or actions in the original due date.
22	Comments	Additional info associated with the risk, mitigation(s) or action(s).
